

#### ANNAPURNA & BEYOND/LOWLAND NEPAL BIRD LIST

This list consists of two parts, the first dealing with the Kathmandu Valley and the Pokhara/Jomsom/Muktinath trek, the second with lowland Nepal and northern India for use at the Kosi Barrage etc. (Some species regularly found at the Kosi are omitted, however, as the list is based on Chitwan, Kathmandu, Bharatpur and the Delhi area only.)

In the Kathmandu Valley/Muktinath trek list the symbol (K) means that the species is largely or only likely to be seen in the Kathmandu Valley. An asterisk means that the species is rarely seen or at least uncommon. In the lowland Nepal/northern India list one asterisk means that the species is uncommon in the areas covered (see above), two asterisks means that it is rarely seen.

Order and nomenclature in both lists follow the field guide to Nepal, with species not found in Nepal marked by a plus sign on the lowland Nepal/northern India list. Some alternative names are given in parentheses. (Some rare species in Nepal do not appear in the Nepal guide and area also marked with a plus sign.)
