BIRDS - NEPAL 1988
Nest / nestings / fledglings found.

Oriental white eye - chicks (4) feathered Kathamdu
Barn swallow - chicks, feathered Kathamdu
Indian House crow - nesting being built Kathamdu
Cattle egrets - Kathamdu
Night heron - Kathamdu
Monica - chicks already flown Chitwan
Little bronze drongo - journey into Shabru
Tickets warbler - nest being built Kanjin
Blue whistling thrush - 3 rests on Taolu river
Fire tailed sunbird - approach to Gosauland (4 eggs - white with multy flocks)

Indian pitta - nest being built Chitwan
Ashy wood swallows - chicks being fed by adults Chitwan
Indian Roller - Chitwan - feeding fledged young
Pufous reclad skinkler babblers - 3 fledged young Shabru
Golden eagle nest - chicks - Kangteng approaching Kanjin
Tailor bird nest - eggs - British embassy Kathmandu
Blue threated barbet - building nest hole - B.E. Kathmandu
Indian honey buzzard - Kathmandu
Dipper with young - on approach to Bamboo lodge B.T.
Black faced laughing thrush with 4 fledglings
White browed tit babblers nestings approach to Kathmandu valley for 5s
Red vented tabby - eggs - B.E. Kathmandu
Yellow cheeked tit - return journey from Gosauland (3 fledglings)
Honey tenwing - nest building -
Coppersmith barbet - 3 fledglings Kathmandu
Young tickets thrush (1 only) - 'native girl's pet'
Common myna - Kathmandu
Olive backed pipit - Kangteng valley near Kanjin.
Species

Loopy Eagle owl

- Seen at dusk on the far side (from the lodge) of Gaada lodge. Seen in flight - it is believed that a pair are nesting (by the resident naturalists - Nepal)

6th Spot-winged goodek (Tek Day 5 & 11)

- Between the crossing of Trisuli Khola and Syabru
- On woodland below Langtang village

Little bronze dove

- Seen sitting on nest about 2 hours walk from Drukke. The nest was about 25 ft up in the fork of a lateral branch of some deciduous tree. Considerable movement of the nest occurred as the winds picked up. The nest was a "deep cup" shape, only the columna head & long tail plumes could be seen from below. The nest was made of soft leaves, small twigs and grasses

Fire-tailed sunbird - May 14th & 16th

Nests (2) - First about a half days walk from Gosauland Thach. The second at Gopri Cave.

- Both nests in juniper bushes - both about 5 ft high. The nest was domed like a "long-tailed" fit, but not as neat. Nest material was largely "mess" grasses, grass and leaves (a few small twigs). Eggs (5 in one nest) were russet "bleached" in colour.

- A number of males seen displaying - flight, "shoos" what I would call "plopping" in the birthing sense - males undulation of flight with chest pointed forward. Much singing - on specific perching points

Hoary harrier - May 18th

Close to Khotonsang. A pair seen sitting nest about 20 ft up in tree fork (thickly covered with epiphytes). The adult pair were taking grasses, small twigs but largely leaves to the site. Pair very timid and I did not stay too long to avoid disturbance (Oak woodland)

Black-faced laughing thrush - May 17th

White-browed fit bobbin

- Half day walk from Khotonsang. 1st species seen tending fledglings (5 with fit bobbin, 3 black-faced l. thrush)
- Territorial - mixed Rhododendron, juniper x pine
Dusky Eagle owl — Seen at dusk on the far side (from the lodge) of Gauda lodge. Seen in flight — it is believed that a pair are nesting (by the resident naturalists — Nepal)

85 Spot winged goosander — Tek Day 5 & 11
5— Between the crossing of Tirsuli Khola and Syabru
11— Fire woodlands below Langtang Village

Little bronze chough — Seen sitting on nest about 2 hours walk from Druche. The nest was about 25 ft up in the fork of a latched branch of some deciduous tree. Considerable movement of the nest occurred as the winds picked up. The nest was a “deep cup” shape, only the cobweb heid & long tail plumes could be seen from below. The nest was a nest tightly woven mixture of dead leaves, small twigs and grasses.

Five-tailed shelduck — May 14th & 15th.
Nests(2) — First about a half days walk for Goshawk lakes. The second at Gopi Gaur.
Both nests in juniper bushes — both about 50 ft high.
The nest was domed like a long-tailed fit, but not as neat. Nest material was largely mosses, grasses and leaves (a few small twigs). Eggs (5 in one nest) russet blocked in colour.
A number of males seen displaying — flight shows. What I would called “parking” in the birthing scene — males undulating flight with chest forward. Much singing — on specific peeling joints.

Honey harrier — May 18th
Close to Kotansong. A pair seen tending nest about 20 ft up in tree fork (thickly covered with epiphytes). The adult pair were tending grasses, small twigs but largely leaves to the site. Feared very timid and I did not stay too long to avoid disturbance. (Dark woodland)

Black faced laughing thrush — May 17th
White browed fit babbler
Half day walk from Kotansong. Both species seen tending fledglings (5 with fit babbler, 3 with face 1 thrush.)
Terrain — mixed rhododendron, juniper & pine.
Yellow checked tit - May 16th

Patti: Beijing - adult tit seen taking feed into hole in partially rotten log (about 6 ft up).
(Synanthedon-like tree)

I hope that some of this information is useful - let me know if you need further details - I just felt it really was time that you got this into.
