

LIST OF THE BIRDS OBSERVED IN NEPAL FROM 23/12/1992 TO 26/2/1993

Observer : J.P. FOUARGE
6 rue Fond Delvaux B 5530 YVOIR BELGIUM

Observations at Chitwan, Kosi and Kosi Tappu where made in company of PALAT CHAUDARI from the National Park of Chitwan.

All the birds observed were included except some very numerous species from urban areas (House Crow, House and Tree Sparrow, Common Mynah, ...). Scarcity of some common birds like some Leaf Warblers is due to identification problems but in other cases birds were really few. In contrast, some not so common birds seem to have been numerous : Booted Warbler, Long tailed Broadbill, White-throated and Guldenstadt's Redstart.

Ciconia ciconia : 4 birds walking in water with 2 Openbill Stork in the marsh east of the east embankment. Size, structure and pattern typical of the species. Bill and legs color dirty crimson, white parts also dirty white probably indicating immature birds.

Rallus aquaticus : 1, on the observatory pool at Kosi Tappu. Size a little above the Rudy-breasted Crake and well under the Moorhen. Structure more elongated than the crakes with long decurved all red bill. Back brown streaked lighter. Flanks with large white and grey-black streaks. Face, breast and belly plain light brown-beige, not grey like the european birds. Undertail white.

Calidris alba : KOSI south of the barrage on the east side. 2 birds on the sand with 20 Kentish Plover and 2 Lesser Sand Plover, 16/2/1993. Medium sized calidrid (same size as Lesser Sand Plover) with a rather short bill, all black legs and bill, pure white underparts, very pale grey upperparts and head; plain coverts have only a fine dark streak in the center. One of the birds with upperparts a shade darker but with the same coverts pattern. Very large pure white wing bar on a dark wing well seen on one of the birds who opened the wing. At the time of discovery, the birds were sleeping; as i approached, they move not far away and they remain not very active. It was 11 AM and the sun as just dispersed the mist of the morning. The weather of the preceeding days was good and they was no event wich could could be related in particular with the occurence of the birds.
