German Parliamentary State Secretary for Development Cooperation, Gundrun Kopp, came to Nepal to inspect health and energy projects. But when she found out that war criminals from both sides are still at large and the parliament was about to give them general amnesty, she changed the focus of her trip.

Kopp invited Purnimaya Lama (left) to the head table at her press conference in Kathmandu on Wednesday. Purnimaya’s husband, Arjun Lama, was abducted and murdered in Kavre in 2005, and the current State Minister for Energy, Surya Man Dong and former Information Minister Agni Sapkota, have been charged with involvement. Kopp also invited Suman Adhikari, whose father Muktinath Adhikari was executed by the Maoists in 2002.

In an emotional appeal, Purnimaya Lama said, “My husband was not involved in the war, his murderers, instead of being punished are now ministers. If there is no justice, our children can kill too.”

Kopp said future German development assistance could be affected if the proposed new commissions on truth and disappearances include provisions for general amnesty.
tucked away in the inside pages of one of the Nepali dailies this week was a photograph (right) that encapsulates the reality of Nepal today, and how the rot starts at the top.

The picture showed CA member from Okhaldhunga, Balkrishna Dhungel, stepping off a plane in Salleri this week together with Energy Minister, Post Bahadur Bogati. Both are profusely garlanded with khadas, and on hand to receive them is the CDO of Solukhumbu and other top cops.

There is only one thing wrong with that picture: Dhungel was sentenced to life imprisonment for the murder of Ujjan Shrestha in Okhaldhunga in 1998. The sentence was confirmed by the Supreme Court on appeal in 2010 even though Dhungel had already been elected to the CA by then, and has since been moving around freely thereby closing the protection of the prime minister himself.

Current State Minister for Energy, Surya Man Dong, and former Information Minister Agni Sapkota (both CA members) are charged with the abdication of 2005 of Arjun Lama. Those implicated in the execution of Lamjung teacher and human rights campaigner, Mukthinsad Adhikari, are walking around freely.

Baburam Bhattarai has a reputation for being honest and upright, but by coddling criminal cronies he has sullied what little respect he had. It is quite clear that Dhungel is too hot a potato to handle even for the second prime minister.

Acts like these destroy the little trust Nepal’s other political parties and the international community have in the Maoist party. The erstwhile revolutionaries have now approved that the war was not about the liberation of the downtrodden, it wasn’t about ending feudalism, and it had nothing to do with winning Nepal’s ethnic minorities their rights. It has now boiled down to amassing wealth and power while the going is good. And anyone who points out the verbal and corrupt actions of the Maoist party is immediately accused of being “the people’s enemy”, a deadly euphemism the Maoists use to justify physical eliminations and murder.

Besides threats of violence and a return to war, the other fear is that trust of the last Scot that one can never rely on their words because what they say is so self-contradictory and outrageous. Far from showing that they are committed to peaceful multi-party politics, their public statements and speeches speak of intimidation, blackmail and threats of violence. The latest was Prime Minister Bhattarai’s statement at the anniversary of the death of lifelong champion of democracy, Krishna Prasad Bhattarai, last weekend. There he once more blackmailed the nation with “50,000 more deaths” if the other parties, civil society and the media oppose his draft of a totalitarian constitution.

Words like that and deeds like the conspiratorial way the Maoists recently tried to get the chief of the Nepal Army to put forth a “flexible” proposal that would directly benefit his in-laws in the ranks, have shatted what little trust existed between the Maoists and the other parties. It was a matter of national pride that we last had a Janjati army chief, that has now been squandered. The chief’s only line of defence is that the Rana-Shah generals also favoured their own kind. The Maoist-inspired proposal would have essentially established a parallel army of guerrillas within the Nepal Army, defeating the purpose of the whole integration exercise.

The result is that things are now even more badly deadlocked on the peace and constitution project, and one wonders if that has been the Maoist intention all along. ‘Liberation’ and ‘reformists’ are bad words in the Maoist lexicon, but what we need now is a re-visioned and reform-minded Maoist party.

The only future for the Maoists is to come out as a demonstrably democratic party that is transparent and honest, do not have to rely on threats and violence anymore, a party that means what it says and doesn’t promise the moon. The sooner Pushpa Kamal Dahal and Baburam Bhattarai see that, the better it will be for them. And for us.

There is only one thing wrong with that picture: Balkrishna Dhungel was sentenced to life imprisonment for the murder of Ujjan Shrestha in Okhaldhunga in 1998.
The federalisation debate in Nepal remains the most contentious, and paradoxically, also the most superficial. And from last week, it has also been accompanied by violence and terrorism.

The demand to turn Nepal into a federal state first surfaced in 1996 just before the start of the war when the Maoists demanded ‘autonomous governments where ethnic communities are in the majority’. In a country which is a dense mosaic of ethnic groups, the demand was clearly a war tactic to drive a wedge in the body politic, and to help boost recruitment. Ten years later, when the war ended and the Maoists made their triumphant return from India, the NC and the UML were in tatters. Discredited for fecklessness and corruption, they had to meekly give in to the Maoist demand for ethnicity-based federalism.

The CA itself never implemented the provision in the interim constitution to set up a State Restructuring Commission, preferring to pretend that it was working on it. Its frivolous and irresponsible attitude was on full public display at the 127th meeting of the CA’s State Restructuring and Power Redistribution Committee when the Maoists quickly undid the consensus of earlier meetings in just 30 minutes. They won over the seven UML members by agreeing to Sherpa and Mithila provinces, and outvoted what otherwise would have been a parallel proposal from the NC.

The State Restructuring Commission was formed hastily on deadline, filled mostly with party activists, and came up with ‘majority’ and ‘minority’ reports without ever once talking to the people. The majority report itself included an absurd ‘non-territorial’ Dalit province, and excluded the earlier one for the Sherpa, possibly because the Commission was led by a Dalit and did not include a Sherpa. The biggest shortcoming, however, has been that these reports never looked into the fundamental issue of federalisation: how would it improve the lives of the people economically, socially and politically?

The neo-feudal politicians in the CA must acknowledge that in this intermixed ethnic country, few are asking for a federation, let alone one with specific ethnic groups as the new ruling class. Most people in Nepal suffer from acute food shortages and underemployment, and they have to migrate to earn enough to feed their families. This requires unrestricted freedom of movement, which ethnic territories will restrict.

There are signs of things to come. Last Monday’s blast in Kathmandu was one. Two years ago, seven men from Gorkha were butchered in Manang for trespassing during yarsa harvesting. There have been attempts at ethnic cleansing in the Tarai. Federalisation, if anything, is only going to raise communal friction among the communities. No one wins, everyone loses.

Lose-lose situation

Dividing Nepal into feuding feudal fiefdoms is not the solution, devolving power is necessary.

Neo-feudalism and a blatant lack of transparency and accountability on part of the politicians at all levels have kept Nepal the poorest and the most misgoverned in the world. Despite this, we have some things to be proud of: the widely-applauded world class success of community forestry due to our demonstrated ability to restore severely depleted forests in just a decade or so (See: Nepali Times, # 593).

More recently, Nepal is ranked at the top among a handful of countries projected to meet the Millennium Development Goals in child survival and maternal mortality rate reduction. These dramatic success stories were the result of devolution of authority to organisations who are beneficiaries themselves: forest user groups in the case of community forestry and the mothers groups in health.

What Nepal needs is extensive devolution of authority to local communities, not breaking up the country into what is most likely going to be feuding feudal fiefdoms.

Stalled for 15 years by Maoist opposition, West Seti will now be built under a Maoist government by Chinese investors

DEWAN RAI

For 15 years, Australia’s Snowy Mountain Engineering Corporation (SMEC) tried to build the huge West Seti project to export power to India, but was stalled by complicated negotiations with India, lack of financing, corrupt officials in Nepal and the Maoist war.

Now, the Maoists who tried their best to stop the project are in government and have brought in China’s Three Gorges Corporation (CTGC) to take over the huge 195m high dam in western Nepal that will create a reservoir 70km long and generate 750MW of power for domestic consumption.

Under the terms of the deal, it will be a build, operate, own and transfer mode for 35 years. CTGC will invest 75 per cent of the shares, the Nepal Electricity Authority (NEA) will put up 25 per cent and local communities will be entitled to 2-5 per cent of the shares. It is not clear how SMEC will be compensated for its preparatory work.

SMEC stuck to Nepal despite tremendous odds. It had marathon negotiations to fix a feasible price for export to India’s Power Trading Corporation, then there were complications over Nepal’s demands for compensation for downstream benefits in flood control and irrigation.

The project was targeted by the Maoists during the war, SMEC also found it difficult to get financing for the $1.2 billion project, and finally gave up last year. Even though it is not clear if the Indians are happy with the Chinese building a hydro project 100km upstream from their border, this time the project seems to stand a better chance because of the involvement of a Chinese company with deep pockets and also because it is now a project for domestic power consumption.

There are questions about how the deal was hurriedly pushed through without a proper bidding process. Energy Minister Post Bahadur Bogati clarified that the country was facing a power emergency, and the project would have been delayed if the government opened it up for bidding.

Arjun Bahadur Karki, Joint Secretary of the Energy Ministry, says finding bidders who would be interested in doing business in Nepal would be difficult. “There is no difference between signing a deal first and then adjusting the conditions in the power purchase agreement,” Karki told Nepal Times.

Under the terms negotiated with CTGC, the government has agreed to sign the power purchase agreement only after the Detail Project Report is completed: “It will be fixed in both currencies to tackle the fluctuation in foreign exchange rates,” Karki says. NEA will have to take a loan for its share of the $1.2 billion project from China’s Exim Bank.

The government has agreed to shoulder the burden of constructing transmission lines, but the project document is silent on payback for water regulation, flood control and irrigation. The reservoir can irrigate up to 270,000 hectares of land downstream in Goli, Ashhim, Bardiya and Banke districts in the dry season and partially mitigate floods in the monsoon.

“We always forget multi-usages of water and focus only on electricity while planning projects, which is unfortunate,” says hydropower expert, Ratna Sanan Shrestha, who emphasises that there should be a dollars and cents value to regulated water.

The reservoir will submerge dozens of villages, affecting some 18,000 people. But the man who led earlier protests against West Seti, Ratan Bhandari, now sees huge advantages. “If local people get their share of benefits and the issue of compensation, relocation and rehabilitation is sorted out, we will all support the project,” he told us.

Most experts agree that the project will benefit a hitherto neglected part of Nepal which suffers chronic food deficit and a massive out-migration of young people. The construction phase itself will create jobs, and since the project is completed irrigation will improve food supply.

The biggest impact of the project will be in alleviating Nepal’s crippling energy crisis. The country’s installed capacity is now above 700MW of which only 90MW is a reservoir project. This means generation capacity dips in winter when demand is the highest. Shortfall this year was 550MW, and there is a deficit of 270MW even in the monsoon.

Besides West Seti, there are five big projects (including Upper Tamakoshi and Chilmile) totalling 840MW that will be completed by 2017. Even if all the projects are done on time, total installed capacity by 2020 will be over 2,300MW which will barely keep up with increase in demand.
BEIJING — If everything goes right for China, it will surpass the United States as the world’s largest economy, in current dollar terms (and more quickly in real terms), by 2021. Its per capita income will reach that of today’s lower tier of high-income countries.

But despite its forward momentum, the Chinese economy faces looming risks in the coming decade. The immediate risk is the continuing recession in Europe. In the last decade, export growth has accounted for roughly one-third of China’s overall economic growth, and about one-third of Chinese exports went to the EU. If the situation in Europe continues to deteriorate, China’s growth will be dragged down.

Over-tightening of domestic macroeconomic policies, especially those aimed at the real-estate market, could heighten the risk of a slowdown, with house prices currently falling across China, owing to stringent government measures. Today, as China looks to the medium term, the government must face the problems created by its pervasive role in the economy. A new World Bank report singles out the lack of reform in state-owned enterprises as the most important impediment to the country’s economic growth. But that is only a symptom of a deeper problem: the government’s dominant role in economic affairs.

In addition to controlling 25 to 30 per cent of the GDP directly, the government also takes a lion’s share of financial resources. In recent years, more than one-third of total bank lending has gone to infrastructure, most of which has been built by government entities. Indeed, recognizing its over-investment in infrastructure, the government recently abandoned several high-speed rail projects that were already under construction. But government over-investment is also evident in numerous industrial parks.

As the National People’s Congress debated China’s future economic strategy this week, there is nervousness about slowing growth. The problem may not be inequality per se, but its consequences, one of which is the bifurcation of human capital. The return on education is increasing in China, but access to education is becoming increasingly divided socially and geographically. While education is improving in urban areas, children in the countryside are facing a decline in educational quality, because better teachers find their way to the cities.

As a result, a majority of rural kids will enter the workforce without a university diploma. Among China’s 140 million migrant workers, 80 per cent have only nine years or less of formal education – far short of what high-income countries require. But there are also promising signs of an economic uptick. The government has just announced new rules for household registration, known as hukou. Except in large cities, people can now freely choose their hukou after three years of residency. This will greatly help migrants by ensuring equal access to education for their children.

The hukou reform is a good start, as it will strengthen migrants’ political rights in local communities. Given their large numbers, their political participation may force local governments to become more responsive to ordinary people’s needs. And government responsiveness at lower levels, one may hope, might eventually trickle up to the top.

Rescue in the Himalaya

Helicopter rescue pilots gear up for another busy spring trekking season. Anusha Udas is one of Nepal’s first helicopter captains and is flying rescue missions with Fishtail Air.

Nepal’s aviation sector has grown by leaps and bounds in the past two decades, and one of the most dramatic progress has been in the spread of helicopter services.

In a country of high mountains and lack of roads, their vertical takeoff and landing capability make helicopters ideally suited for Nepal’s terrain. More recently, helicopters have turned from a luxury to a necessity. Hiring a chopper is no longer just for high-class tourists and VIPs anymore.

There are five chopper companies with 13 helicopters in Nepal today, and this is expected to grow as tourism booms. Sightseeing, cargo flights, transportation for hydropower projects, rescues and even pilgrimages are now possible with competition bringing down prices.

Today, Nepal’s mountains and valleys are alive with the sound of Russian-built Mi-17s, Japanese BK-117s, and the French Ecureuil AS350s. Of these, the Mi-17 has been nicknamed the “flying truck” because it can carry four tons of cargo to remote areas.

As a helicopter pilot specialising in rescue, no matter how often I fly I am still amazed by Nepal’s scenery. There is truthfully no other place like this in the world. The vertical topography with its deep gorges, lofty mountains and tricky weather make Nepal a challenging place to fly. Added to the exhilaration is the sense of achievement one gets after completing a successful rescue mission.

As we approach the busy spring season, the aircrafts are now on high alert and standby to fly out to remote corners of the country. There are tens of thousands of trekkers and mountaineers all over Nepal, and there are medical emergencies almost every day. Accidental falls on the trekking trails, altitude sickness, frost bite are the most common calls for helicopters.

Once on a rescue flight, there isn’t much time to admire the scenery. Navigating to the rescue site is challenging, and often there aren’t even proper helipads where we land. After picking up the patient, speed is of the essence and we need to take the most direct route to Kathmandu weather permitting. In major emergencies, we even get a clearance to take the passenger straight to the helipad at the Teaching Hospital.

Not all rescue flights involve trekkers. In fact, Nepalis are increasingly calling in helicopters for rescues. Recently, we rescued a woman from Humla who was having a complicated delivery. She moaned in pain all the way. When we landed in Surkhet, I looked back to see that she had given birth to a beautiful baby boy, the second in-flight birth we have seen so far. There is nothing to compare with the joy of that sight.

I believe the time has come to start an air ambulance service in Nepal. Many road accident victims and other seriously ill people won’t survive a bumpy car ride to the nearest hospital, but helicopters are still very expensive even though Nepalis usually pay half the rack rate for an one hour rental. If the government can waive taxes on rescue flights, it would be more affordable. For a real air ambulance, you need life-saving equipment on board and a health attendant to go along.

Here come the flying trucks, #25.
The morning of 28 April 2010, the clouds were moving in at the Base Camp of Annapurna I. High on the mountain above, a Spanish expedition was stuck at camp at 6,400m on the south face of Annapurna, one of the greatest rock faces on earth. The six-member team had climbed the 8,091m peak the day before, but were trapped by a strong blizzard on the way down. One Spanish climber was dead, the rest needed to be rescued, including Carlos Pauner, Juanito Oirazabal, Horia Colibasanu and Dawa Sherpa. Fishtail Air’s AS 350B3, specially fitted for high-altitude rescue was going to try to get them out.

Richard Lehner and Captain Daniel Aufdenblatten of Air Zermatt, a Swiss mountain rescue company had been training Fishtail Air in the Mt Everest region by picking stranded climbers using long ropes. The world’s most famous mountain rescuers just happened to be in Nepal, and were pressed into service by Fishtail’s Captain Sabin Basnyat who was killed later that year on Ama Dablam while trying to rescue Japanese climbers.

It was like nothing Lehner and Aufdenblatten had seen in the Alps. Annapurna South Face is a vertical wall of ice and rock 4,000m high. “It was really steep,” Aufdenblatten recalled later, “flying at 45 m from the rock face, I could look straight down 3,000 metres.”

After several attempts, racing against advancing clouds, four climbers were plucked out of the mountain and the two Sherpas made it down on their own. Aufdenblatten was awarded the Heroism Award by Aviation Week in 2011 for the highest-ever rescue in mountaineering history.

Himalayan Rescue Association (HRA) was established 40 years ago, and since then has saved thousands of lives, mainly of trekkers suffering from altitude sickness. The non-profit operates two high altitude aid-posts at Manang (3500m) in the Annapurna region and Pheriche (4200m) in the Everest region with qualified volunteers. The centres are preparing for rescues as the spring trekking season gets underway in what looks like is going to be a busy season. Foreign patients are requested to pay a service charge or leave a donation. Nepalis are treated free of cost, though those who can afford, can pay a Rs 50 consultation charge. The centres treat nearly 5,000 patients per year, and there are more than 150 helicopter evacuations of serious cases.

HRA coordinates helicopter rescue once informed of a case requiring evacuation. For foreign trekkers, the agency will usually have insurance information or an agreement in the event of an emergency evacuation. The HRA coordinates with the agency, insurance company and the relevant embassy ensuring a guarantee prior to dispatching the helicopter. The HRA is on 24-hour radio call with helicopter companies. Cost for helicopter rental is Rs 2,440 per hour, and all companies charge minimum three hours for a roundtrip from Kathmandu to Annapurna or the Everest Area for rescues.

Children rescued from circus bag gold medals at the National Games

A man Tamang was six, and Bijay Limbu was eight when they were rescued from the Great Bombay Circus in Delhi in 2002. The boys had been trafficked to India and sold to circuses when they were babies to be trained for daring aerial acrobatics, juggling and spinning tricks. Last week, at the National Games in Dhangadi, Aman (now 16) won four gold, one silver and two bronze medals in gymnastics. Bijay (now 18) won a group gold medal for the Madhyamanchal team along with Meena Lama who was rescued from a Gorakhpur circus six years ago. After returning from Dhangadi, they were welcomed with garlands and vermilion at the Esther Benjamins Memorial Foundation (EBMF) shelter near Kathmandu, a place they call home and where they have been living since being rescued.

At that time, none of them could read or write, they were psychologically traumatised and hadn’t spoken to their families since they had been taken away. Today, Aman and Bijay are in their final year at Kitu Secondary School in Lalitpur, take daily lessons on gymnastics in Dasrath Stadium and are star performers in the EBMF’s famous troupe for circus-removed children, Sapana.

“We did not want the skills these kids had learned with so much pain and hard work to go in vain,” explained Shailaja CM of EBMF. The boys were reluctant at first to relive what they went through at the circus, but once they saw how their trainings were different, they were enthusiastic and made fast progress.

There are 120 other children like Aman, Bijay and Meena at the EBMF shelter in Taulkhu where they go to school and train on a range of vocational activities. Others perform for Sapana, the country’s first domestic circus company.

“The support these children fill the time they stand on their own feet,” says Shailaja.

Bijay says he and Aman were treated like prisoners in the circus, forced to jump without safety nets and locked away after performances. He adds: “But today, doing the same things that used to cause so much pain brings us joy.”

**Football fever**

N epal is hosting the fourth Asian Football Confederation (AFC) Challenge Cup that will take place in Kathmandu from 8 to 19 March. In addition to Nepal, football teams from Turkmenistan, Philippines, Palestine, Maldives, Democratic People’s Republic (DPR) of Korea, India and Tajikistan are participating in the tournament. The winner of this edition will qualify for the 2015 AFC Asian Cup finals in Australia, making this edition of the biannual tournament an important one for all teams.

The three previous tournaments were hosted by Bangladesh, India and Sri Lanka in 2006, 2008 and 2010 respectively. Joseph Seppe Blatter, the president of football’s governing body, FIFA, arrived in Kathmandu on Thursday to inaugurate the AFC Challenge Cup.

**Accor**

According to Maskey, fries should not be limited to the ‘French’. He gave us a sampling of his new menu that features what he calls ‘China Fry’ and ‘India Fry’. The ‘China Fry’ (Rs 110) is sliced tofu battered and fried, a great alternative to the potato classic. From an adjacent bakery counter, chaffle cakes iced with real whipped cream are made daily and limited, ensuring high quality. Trans-fat free, the silky slices of tiered creations (Rs 90 for a single slice) like choco-chips or pineapple pastry partner well with a perfectly brewed cup of Joe.

The wide-open cafeteria with swivel chairs and outside seating mirrors Western fast food joints but does not deter customers from lounging about. Self-service, good cheap eats, free WiFi and natural lighting set up a reliable, casual hangout that could easily compete with an international franchise.

Get to Boudhanath, ditch the stupa entrance, cross the street and peer into an alley just after G Mart
My Week With Marilyn

Marilyn Monroe, born Norma Jean Baker, died at the age of 36 in 1962 having achieved both critical and commercial success. Today she remains one of the biggest movie stars and an indelible symbol of blonde bombshell beauty. Yet, essentially she is still enigmatic. How exactly did little old Norma Jean transform herself into the definitive Marilyn, and who was she really?

Simon Curtis’s adaptation of Colin Clark’s memoir (of the same name) is a fascinating portrait of the erratic behaviour of Ms. Monroe during the shooting of The Prince and the Pauper, and a feature directed by and starring Lawrence Olivier and Marilyn Monroe and intended as a star vehicle for both.

A newly married Marilyn Monroe (Michelle Williams) arrives in England with her husband, the famous playwright, Arthur Miller (Dougray Scott) to start filming The Prince and I. She is possessed and lit-up around everyone including Sir Lawrence Olivier (Kenneth Branagh) who, of course, wants to both sleep with her and make an amazing film. Colin Clark (Edie Redmayne), an earnest young gentleman determined to join show business, is deployed by a team of anxious producers to make sure that everything is as it ought to be. Clark proves himself to be both intrepid, and attractive enough to catch Marilyn’s eye and hence our glimpse into the dangerous power of the man she was then. In 2005 Tomaz Humar was attempting another solo climb on the 7,000 m high Langtang Lirung when he broke his leg and was stuck on a ledge unable to move. He told his friends that he had already experienced many issues and may literally be dismembered. But if there is an experience in the early Himalaya can be at an altitude of 30,000 ft, hypothermia (cold temperatures), hypoglycemia (lack of oxygen) and (de) hydration (lack of water) which can all independently kill the climber. Clearly, climbers like Tomaz have tremendous motivation and that obviously helps them deal with these physical deficiencies.

But there is an added injury like a broken leg, this may literally be the last straw on the camel’s back. Indeed, in November 2005 Tomaz Humar was attempting another solo climb on the 7,000 m high Langtang Lirung when he broke his leg and was stuck on a slippery ledge. Unfortunately this time even through Gerald Hiner and his crack team from the Swiss Air Zermatt mountain rescue company attempted the rescue with better helicopters, it was too late for the Slovenian. Daredevil climbers like Tomaz, powerful satellite phones for rescue at high altitude, and new high-performance helicopters that can fly at 7000m for rescue missions all combine to make medical performance helicopters that can sell better than stories of spine-chilling rescues against the backdrop of magnificent, snow-covered mountains.

With their wealth of experience in the Alps, the Swiss are helping Nepali helicopter pilots and mountain guides perform rescue missions carefully and competently. However, the rescues in the Himalayas can be at an altitude thousands of meters higher than the rescue in the Alps. So there may indeed be a steep learning curve, and the potential for disaster in the early days.

See “Himalayan rescues” page 6-7.
DHANUSA — This week, BBC Nepali ran a report about how Pahadi families who were displaced from the plains after the Madhes uprising were starting to come back. They had left their homes, neighbours and livelihoods to take refuge in the predominantly Pahadi town of Hetuada. Some had moved to Kathmandu, but could not adjust to the new life and longed for home.

I was immediately reminded of the Tamang and Chettri families I met in Bara four years ago. They spoke to each other in Bhojpuri, and their Nepali had a defined Madhesi accent. Their families had lived in the Tarai for generations and had grown up together. They had no home in the hills to go back to, had little idea of their ancestral roots and had decided to stay despite daily threats and intimidation by armed Madhesi groups.

I lost touch, and have often wondered what became of them. Did they leave, did they stay? But travelling to my own ancestral village in the eastern Tarai last month, I could see there is more holding Nepalis together than is setting us apart.

Here in the heart of the eastern Tarai, Pahadis and Madhesis have been living cheek to jowl for over a hundred years now. The Giris and Bharatis who came from the hills established a new settlement together with locals from nearby villages. A new village was formed, and over the years the two communities are so well integrated that unless one asks, they wouldn’t know who is a Pahadi or who is Madhesi.

Of course, these stories don’t count when leaders who claim to represent the Madhes spew hatred, threaten secession and blockades. They suggest the only way to right the wrongs committed against the Madhes is to scare away all the Pahadis from Tarai. It is this corrosive politics of hate and revenge that gets all the headlines in Kathmandu.

But here on the ground ask farmers and traders what concerns them the most, it is almost never politics or ‘identity’. They are worried about the lack of roads and bridges, and where they exist, the terrible state they are in. They are worried about the rainy season, floods, the lack of irrigation and falling harvests and prices of their produce. They are worried about their sons toiling in the deserts of the Gulf, and the fields they will have to sell to pay the middleman to send their second son to Qatar.

When politics does touch them, it takes the shape of prolonged strikes that cripple life for weeks on end. They worry about federalism and what it will mean. Op-eds in Kathmandu’s national media carry dire warnings from pundits about the coming Madhesi conflagration of anger, or a violent backlash if federalism is rejected. There is almost no sign of it here.

The people of the Madhes gave up hope long ago of their Madhesi leaders doing anything for them. There is disillusionment and a realisation that Madhesi leaders do not speak for the Madhesi people. Madhesis are now in the government with powerful portfolios, the deputy prime minister and home minister are Madhesis. But what have these leaders done except split countless times, make short-lived alliances to blackmail their way into government and issue empty threats just so that they can remain politically relevant?

The Madhes is how it has always been: left to itself. And the people of the Tarai have come to terms with it. No one wants another uprising, they just want development and jobs. Madhesi leaders would want us to believe that all the problems of the plains, the inequality, injustices and state neglect will be resolved once they have a Madhesi federal state. But few here hold out much hope.

Madhesi people want better leaders, not this discredited bunch who defected from the NC and rode the wave of the Madhes Movement in 2007. Madhesis want to be respected, and treated like Nepalis. They want an end to the criminalisation of politics. Anyone who thinks otherwise, like a village elder here told me, hasn’t lived here long enough.
Nepal launched its biggest ever vaccination campaign to immunise 1 million children between 9 months and 15 years against measles and rubella on 26 February and is conducting over three phases across the country.

The government had organised support from WHO, UNICEF, Rotary International and the Lions Club to immunise children against measles, one of the world’s deadliest and most contagious vaccine-preventable disease, which kills thousands of Nepali children under five every year. All the logistics required to get the vaccinations and volunteers to remote areas had been arranged.

Minister of Health and Population, Rajendra Mahato, proclaimed: “Immunisation is a weapon of mass protection.”

However, on the day the campaign was set to kick off here in western Nepal on 26 February, two teacher’s unions affiliated to two political parties declared a nationwide closure of schools because their demands for benefits and salaries were not met by the government.

Even though some of the schools agreed to let their premises be used as vaccination centres, the two day shutdown resulted in a much lower turnout. Instead of administering the shots, district public health officials in the far and mid western regions were busy rearranging new dates and venues.

“Although we went ahead with the vaccination, due to the banda we could not reach all the children and 100 per cent coverage was impossible,” said public health officer, Achyut Lamichane. The children who missed their shots are now in serious danger of being infected with measles.

Female Community Health Volunteers (FCHVs) who had worked tirelessly to prepare for the day, spread awareness about measles-rubella and remind families of dates and centres were disheartened by the poor attendance. Raj Kumari Tharu, a volunteer at the Somnath Janata Primary School in Vakhari VDC said, “We could not vaccinate a lot of children and we are worried whether they will show up on the rescheduled date.”

In 2011 the government declared schools as ‘zones of peace’ and...
Women volunteers to the rescue

On the third day of Nepal’s vaccination campaign, Dinra BK, 48, arrived at Shiva Higher Secondary School in Sattakoti near Sankhet with her five grandchildren. But before the children were given their shots, she found out about the possible side effects of vacinating her epileptic grandson. “The programs done by the female volunteers in our village have made me more aware about my family’s health. I ask questions and try to keep myself well informed,” she explained.

named 2012 as the ‘Year of Intensification of Routine Immunisation Program’. However, politics has not just undermined the government’s efforts, but also violated children’s right to health and education.

On the launch of The State of the World’s Children report this week, UNICEF’s Nepal representative, Hanaa Singer, spoke to Nepal Times on the needs of the children of the urban poor in the country.

Nepali Times: One in every five Nepali lives in cities, with the number of people living in urban areas has gone up from the present 19 per cent. Unfortunately urban infrastructure and services have not been able to keep pace, leading to deprivations that affect children the most, especially those vulnerable children living or working on the streets or living in the slums. Children living in urban poverty are often more undernourished than those living in rural areas. And those living in urban slums are among the least likely to be registered at birth, immunised or vaccinated.

During the ceremony to launch The State of the World’s Children report this week, Neeraj Malla, a 12-year-old child from Birganj, told the guests: “If a city can be made friendly enough for little ones like me, it can surely be fit for kids like you.” He was so right.

Is it that urgent? After all, children in cities are closer to basic services than rural children?

Too often, the poorest and most marginalised children in cities lack access to the basic services on their doorstep, and are disproportionately vulnerable to violence, exploitation, injuries, illness and death. When children living in slums or dark inner corners of the city live up surrounded by wealth and opportunities from which they are excluded, it can give rise to frustrations and ill will. A study of 24 of the world’s wealthiest countries has confirmed that the more ‘unequal’ a society is, the higher the rate of crime, violence and imprisonment. Investing in children and adolescents always makes sense, even economically.

In Nepal, how does UNICEF propose to address this inequality?

Over the past 10 years, Sattalika has made dramatic progress in early childhood development, thanks to female health volunteers. Indeed, Nepal’s dramatic decline in maternal mortality and infant mortality has been credited to the work of the nearly 40,000 community health volunteers across the country.

Inequality?

In Nepal, how does UNICEF propose to address this economically.

The involvement of local communities in places like Sattakoti has not only led to greater awareness and better access to health services but is also helping the country meet the Millennium Development Goals (MDGs).

Similarly, the maternal mortality rate which was 415 in 2010 declined to 226 in 2010 and the under-five mortality rate dropped from 84 in 2000 to 50 in 2010. Nepal is likely to fulful most of the UN’s requirements in the next three years, if we continue to progress at the same speed.

Despite their proximity to maturity and obstetric emergency services, the report says, the poor in cities are deprived of such services which in turn leads to high urban child mortality rates.

The situation is worse in slum areas where one-third of children are unregistered at birth. Low levels of hygiene and sanitation in overcrowded slum areas put children at risk of disease and disasters. Most slum dwellers fare worse than their rural counterparts in health, sanitation and nutrition indicators.

Similarly, children of migrants, refugees and internally displaced people who make up a large part of the urban poor are at a huge disadvantage because they don’t have birth certificates. Without papers, children and their families are virtually non-existent in official accounts, are unable to access government support and live in constant fear of eviction.

Even when education is provided free of charge, many children are not able to attend schools because of soaring costs of uniforms, books and supplies. But when children stay out of schools, they are in danger of being trafficked or exploited by their employers in dangerous jobs.

UNICEF recommends urgent changes in urban planning, and infrastructure development, so that the needs and priorities of urban children are fulfilled.

Systems are not in place, it is like having laws without teeth. It is only when systems are established that we can provide free and quality education to address cases of child abuse, exploitation and neglect.

The government is trying to evict slum dwellers along the rivers in Kathmandu. What do you think will be the consequences for the children living there?

This is a very sensitive issue that needs to be treated with care. The starting point is to identify the bottlenecks and barriers and to review how they can be overcome. Ensuring that all children are registered and documented is one priority step giving them dignity and security as opposed to bitterness and frustration. All people, adults as well as children, need to have official documentation showing who they are and where they live. Then there must be a longer term planning which provide options and alternatives for housing.

Many families from rural areas have migrated to cities for better opportunities, and most children from such families usually choose working over education. How can we make sure they go to school?

You are right, education normally gets sacrificed if the push for earning a livelihood is overwhelming. Yet I am impressed by the resilience and determination of parents and children towards education and they are usually very eager to join education programs if given an option that will accommodate their needs. I am working with the children and yet give them an opportunity to learn. The Urban Out Of School Program is one such option, as is the Girls’ Access to Education (GATE) providing a 9-month package particularly for girls from disadvantaged groups.

These programs include life skills together with literacy and numeracy and is immensely popular, they allow children to enjoy two hours of childhood in their young lives and the results are so heartwarming, and gives one so much hope for a brighter future.

Excerpts from the interview

“Making cities ‘child-friendly’

Children who now live in urban areas. While cities provide better health and education facilities and offer greater economic opportunities, growing urbanisation and the wide gap between the urban rich and urban poor means that access to services is increasingly difficult.

During the ceremony to launch The State of the World’s Children report this week, Neeraj Malla, a 12-year-old child from Birganj, told the guests: “If a city can be made friendly enough for little ones like me, it can surely be fit for kids like you.” He was so right.

When a city becomes ‘child-friendly’ and we address the needs of the most marginalised children, everyone is also benefited. UNICEF is working with the Ministry of Local Development to promote ‘Child Friendly Local Governance’ which ensures the participation of children in the planning phases, and allocation of some financial resources dedicated to children programs to be decided upon by the young people of the village, district or municipality.

UNICEF works with its partners in eight municipalities considered as hubs of child labour to provide children with access to formal and non-formal education or vocational training by providing them with life skills, psychosocial counseling, or medical care, legal aid, or reunification with their families.

We also need to work vigorously towards building a comprehensive child protection system in Nepal to strengthen this system from the central level to the ward and community levels. At the moment, since the
Jungle to mansion

Ganga BC in Kantipur, 3 March

Contrary to communist ideology, the chairman of the ‘proletariat’ party Pushpa Kamal Dahal ‘Prachanda’ seems to believe in high living rather than high thinking. While his mentor Kiran Baidya lives in a rented room in Gongabu, Dahal recently moved from Nayabajar to a grand mansion with three living rooms, a library and a swimming pool in Lazimpat. Dahal who has no known sources of income, pays Rs 1,03,000 per month to house owner Shishu Bhandari who lives in Canada.

Prachanda has made an easy transition from the jungle to the mansion. When Prachanda and Baburam first appeared publicly in Baluwatar during the ceasefire they wore khaki shirts and trousers and it automatically became the ‘proletariat’ dress. But the khaki soon disappeared and Prachanda has not been seen in the dress since then.

When Dahal entered Baluwatar as the prime minister, people were shocked by his appearance. He was clean shaven, his hair was jelled and he looked as stylish as Girija Prasad Koirala or Jhalanath Khanal. He has danced with famous Nepali actress Rekha Thapa, likes to stay in fancy resorts for an extended period of time during party meetings, political negotiations and personal holidays and is also known to enjoy liquor. In fact Prachanda is deemed responsible for introducing the culture of drinking within the Maoist circle who were once vehemently opposed to alcohol.

Baidya supporters are angered by the chairman’s extravagant lifestyle, and say he has betrayed his cadres by selfishly climbing the social ladder. However, as long as he is powerful and influential, Prachanda seems least bothered about what others think of him.

Rethinking privatisation

Editorial in Karobar, 7 March

The privatisation drive which began in the 1990s led to the transfer of 18 public enterprises to private holdings while others were shut down. It was expected that privatisation of these enterprises would end corruption and improve their financial condition. But even after 20 years, evidence suggests that the privatisation policy has failed and these companies have gone from bad to worse. Many of these industries have lost their assets and lands while equipment were sold off or used for other purposes. A report by the Finance Ministry states that the private companies that took over from the state have not paid their royalties yet.

The ineffectiveness of privatisation is now forcing the government to rethink its policy and explore new alternatives like management contract. The government is also considering a policy change which will prohibit the private companies from completely shutting down operations of the privatised entities. This may motivate the owning companies to improve the economic status of their enterprises rather than looking for easy escape routes by completely shutting down operations. However, such a move will be detrimental for companies that cannot maintain their operation costs. Perhaps the government should think about taking back ownership or outsourcing management.
Interview with Upendra Yadav, chairman of MJF (Nepal) in Nepal, 11 March

What happened to the slogan of One Madhes?
Federalism is an achievement of the Madhes movement. All seven parties agreed to an autonomous Madhes and the 8 and 22 point agreements clearly mention this clause. There are three reasons why we are going for federalism: high economic growth, good governance and end to the discrimination. If these concerns are addressed, the federal structure should not be an issue.

You have said that three to four Madhesi states can be agreed upon.

Firstly states will be made on the basis of identity and capacity, not ethnicity. Secondly, ethnic states are not possible in Nepal. Let’s say we form a Newa state in Kathmandu because Newars have a majority here. But they can’t have more rights than other people who live in Kathmandu. Likewise, everyone living in the Madhes, regardless of whether they are Pahadi or Madhesi will have equal rights. No group will have special rights over the other.

How can a pro-Madhes party like yours embrace Pahadi people as its own?
Our party is active in 30 districts, out of which eight are in the hilly region. We have two central committee members who are of hill origin. We won’t repeat the discrimination that we ourselves had to endure. Our fight is not against any community. We just want the state to stop its discriminatory practices.

Will we have the new constitution within the deadline?
Not at the pace we are going. Now we hear there is a conspiracy to bring out a constitution without federalism. This is unacceptable. If this happens it will be a betrayal to the Madhes movement and the people’s uprising of 2006.

Light on the other side

Editorial, Annapurna Post, March 2

The MoU signed between China’s Three Gorges International and the government this week has reinvigorated hopes for the energy anemic Nepali economy. The 750 MW installed capacity project, in which 25 per cent will be invested by the Nepali government, will help bring an end to Nepal’s energy crisis. The representatives of Three Gorges also promised to help Nepal obtain soft loans from China’s Axim bank. The project, although ambitious considering Nepal’s past history with big projects, offers hope specially with the international reputation Three Gorges commands after it successfully completed the world’s largest hydro project in China’s Yangtze river during which it relocated 1.3 million people.

The other important factor that makes this project useful for the country is, the generated power will entirely be for Nepal’s internal consumption. This guarantees Nepal’s future energy security. However, there are other issues related to the projects like revisiting the DPR to include changes, negotiating the power purchase agreement and ensuring that the project has minimum environmental impact.

The legacy of bad energy politics, which affected projects like Arun III and Upper Karnali in the past must not be continued. An estimated fifteen thousand people will have to be relocated during the construction of the project, which should not be politised and everybody concerned must facilitate their successful rehabilitation.
Ass-trological outlook for Nepal

Some of you star-struck readers out there will have noticed that Jupiter and Venus are getting up close and personal in the heavens these days. And for the first time in ten years, all five visible planets are in the evening sky, that is if you can see through Kathmandu’s smog. To make sense of this phenomenon we consulted the ex-royal astrologer who says the conjunction of the planets doesn’t bode well for Nepal till May. In fact, the soothsayer advises all Nepalis to stay indoors, bolt the windows and wear ear plugs to avoid any untoward mishaps. As long as I had him on the line, I asked the ass-trologer whether the constitution would be written on time. He measured the distance between Jupiter and Venus, did some calculations and said: “In some parallel universe, maybe, but not in this one.”

Which should be very worrying to all and sundry, but the way our pols are going about their business it looks like they don’t have a care in the world. In his war anniversary speech at Khula Munch last month, Chairman Maximum poured scorn over the Supreme Court ruling that there will be no more extensions of the CA after May. And while in public he tells everyone not to worry about the constitution not being written in time, confidentially he has been telling colleagues not to worry because there will be another extension. It is clear the Maobaddies strategy is to drag this thing out as long as possible until the time is ripe to go for state capture. Which is why Ram Sharan, who was planning to pull out his gun and shoot his rival Maoist faction fearing persecution from a political asylum on arrival, is coming out with his axe swinging these days calling the Baddies all a bunch of liars and hypocrites. Umm, but that is what is the Mao-Mao cadre themselves call their leaders, no?

This headline was bound to happen sooner or later: ‘Manist Leaders Stranded Because of Maoist Bandh’. So it came to pass that the top Baddie brass had trooped off to Pyuthan to hear themselves give fiery speeches when they found out they couldn’t get out of there because of a strike called by local comrades. They got the Army to dispatch Gyan’s Romeo Alfa Juliet to rescue them. As the Super Puma took off in a cloud of dust, local reporters overheard people in Pyuthan who had been stranded all day due to the bandh hurling choice epithets at the former revolutionaries that are unprintable even in the backside page, but one sounded like “Ma-Cheese”.

Who says there hasn’t been progress in the peace process? During the war, the Baddies used choppers to cut people into little pieces, now they fly choppers. Which is what convicted murderer and CA member, Ball Krishna Dhungel, did the other day in Salleri in the company of the Energetic Army to dispatch Gyan’s Romeo Alfa Juliet to rescue his local comrades. They got the Super Puma into little pieces, now they use choppers to cut people around arrresting jay walkers and those driving under the influence, because they can’t seem to get around to arresting serial killers-turned-politicians.
