Directeur : Jean-Luc Achard

Comité de rédaction : Anne Chayet, Pierre Arènes, Jean-Luc Achard.

Comité de lecture : Pierre Arènes (CNRS), Ester Bianchi (Dipartimento di Studi sull’Asia Orientale, Venezia), Anne Chayet (CNRS), Fabienne Jagou (EFEO), Rob Mayer (Oriental Institute, University of Oxford), Fernand Meyer (CNRS-EPHE), Françoise Pommaret (CNRS), Ramon Prats (Universitat Pompeu Fabra, Barcelona), Charles Ramble (EPHE, CNRS) Françoise Robin (INALCO), Brigitte Steinman (Université Paul Valéry, Montpellier III) Jean-Luc Achard (CNRS).

Périodicité
La périodicité de la Revue d’Études Tibétaines est généralement bi-annuelle, les mois de parution étant, sauf indication contraire, Octobre et Avril. Les contributions doivent parvenir au moins six (5) mois à l’avance. Les dates de proposition d’articles au comité de lecture sont Novembre pour une parution en Avril, et Mai pour une parution en Octobre.

Participation
La participation est ouverte aux membres statutaires des équipes CNRS, à leurs membres associés, aux doctorants et aux chercheurs non-affiliés.

Les articles et autres contributions sont proposées aux membres du comité de lecture et sont soumis à l’approbation des membres du comité de rédaction. Les articles et autres contributions doivent être inédits ou leur ré-édition doit être justifiée et soumise à l’approbation des membres du comité de lecture.

Les documents doivent parvenir sous la forme de fichiers Word, envoyés à l’adresse du directeur (jeanluc.achard@sfr.fr).

Comptes-rendus
Les livres proposés pour compte-rendu doivent être envoyés à la Revue d’Études Tibétaines, 22, avenue du Président Wilson, 75016 Paris.

Langues
Les langues acceptées dans la revue sont le français (en priorité), l’anglais, l’allemand, l’italien, l’espagnol, le tibétain et le chinois.

La Revue d’Études Tibétaines est publiée par l’UMR 8155 du CNRS, Paris, dirigée par Annick Horiuchi.

Between History and Biography: Notes on Zhi byed ri pa’s Illuminating Lamp of Sun and Moon Beams, a Fourteenth-Century Biographical State of the Field

Andrew Quintman (Yale University)

I. Introduction

The text entitled The Life of Rje btsun Mid la ras pa: An Illuminating Lamp of Sun and Moon Beams (Rje btsun mid la ras pa’i rnam par thar pa gsal byed nying zla’i ’od zer gyi sgron ma) formed a landmark in the development of one of Tibet’s best known literary traditions: the corpus of materials depicting the life of acclaimed yogin and poet Mi la ras pa (1028/40-1111/23).1 The work appeared more than a century prior to Gtsang smyon Heruka’s (1452-1507) famous 1488 version of the life story, and for nearly five hundred years it remained an important source for Bka’ brgyud authors recording the yogin’s life. Its author, one G.yung ston Zhi byed Rikrod pa (born ca. 1320), did not simply craft a life story after the fashion of early works in the biographical corpus, although the text exhibits influence from numerous such sources. Rather, he has produced a composite survey of the entire biographical tradition itself, incorporating historical analysis, chronological clarifications, literary criticism, question and answer records, an atlas of sacred sites, an assessment of existing oral traditions, documentation of transmission lines, as well as a smattering of biographical narrative, all mixed together with a good deal of autobiographical reflection. The composition has the appearance of a work compiled from notes gathered over a long period of time, a process that Zhi byed ri pa himself describes in some detail. The text forms what in modern parlance might be called a “state of the field” survey of Mi la ras pa studies in the late fourteenth century, reading not unlike a somewhat rushed, and at times rather disorganized, graduate thesis.

1 A brief synopsis of this paper was presented at the workshop New Directions in Tibetan Literary Studies: Perspectives and Prospects in Auto/Biography held at Columbia University in November 2008.

1 The original manuscript is listed in the ‘Bras spungs dkar chag (Dpal brtsegs bod yig dpe rnying zhib ’jug khang 2004): phi ra 72, 017188, 105 folios, 45 x 8 cm. The edition in my possession is based on an edited version of the original manuscript. This was reportedly edited once and in the process much of the original orthography, including spelling deviations, were “corrected.” The work therefore contains many inconsistencies, retaining, for example, the old spelling mid la on some occasions while using the more common mi la in others. The version has numerous typographical errors and several folios were reportedly entered out of their proper order. Unfortunately, original page numbers are not recorded in the printout and it has not been possible to compare the computer text with the original manuscript.
The *Illuminating Lamp* has come to light only recently, although translator Lobsang Lhalungpa previously described its author as a contemporary of the polymath Bo dong Phyogs las rnam rgyal (1377-1451).\(^2\) A few scholars have since echoed Lhalungpa’s remarks, but the present study stands as the first extended review of Zhi byed ri pa and his composition. Even as the early literature of Mi la ras pa’s life story was largely superseded by the standard version, and the *Illuminating Lamp* has remained in the dark for contemporary scholarship, Zhi byed ri pa clearly maintained his status as a significant and authoritative voice in the tradition.

Zhi byed ri pa’s contribution is noteworthy for several reasons. First, the work attests to the vibrancy, the complexity, and the shear breadth of Mi la ras pa’s biographical tradition—and of the Tibetan tradition of life writing more broadly—at a relatively early moment in its development. By the late 1300s, more than a century prior to Gtsang smyon Heruka’s canonical versions of Mi la ras pa’s biography (*rnam thar*) and collected songs (*mgur ’bum*), Zhi byed ri pa repeatedly claims to have seen 127 different versions of the yogin’s life. While such a claim may not be ruled out as pious fiction, if accurate it would increase nearly tenfold the number of sources known in the tradition at the time of his writing.

Zhi byed ri pa also records a wealth of information regarding Mi la ras pa’s life lacking elsewhere. We find, for example, a detailed reckoning of genealogy and marriage codes that recasts Mi la ra ras pa’s loss of patrimony and descent into poverty as a study of regional social relations. We read of the yogin’s travels to eastern Tibet and his visionary encounters with great Indian Buddhist masters of the past. We see also a comprehensive reckoning of the author’s sources, from oral accounts to obscure written materials including catalogues of the yogin’s favored childhood songs.

The *Illuminating Lamp* is perhaps most remarkable in that it makes transparent many editorial decisions faced by the would-be biographer: How to mediate the often conflicting concerns of voice, story, and structure? What information constitutes necessary, or even valid, biographical detail in an effort to balance comprehensiveness on the one hand with narrative clarity on the other? Tibetan biographical narratives frequently maintain a feeling of incontrovertibility, seamlessly smoothing out the wrinkles of conflict and contradiction found in earlier works of the tradition. Here, Zhi byed ri pa takes an unusual approach to the process of biographical writing, in some instances employing traditional narrative storytelling, but more frequently resorting to forms of historical documentation and polemic.

In what follows, I first introduce the author Zhi byed ri pa and his *Illuminating Lamp*. I then survey the terrain of his account, highlighting several of its more important and revealing features. I conclude by briefly addressing some of the questions that this remarkable text raises: What are Tibetan authors looking for when they write biography and, in turn, what are we as critics looking for when we read them? I want to specifically address how the author employs particular literary terms as a means of legitimizing his work within the broader corpus of literature on Mi la ras pa’s life. The *Illuminating Lamp* leads us to raise fundamental questions.

\(^2\) This is in the introduction to his translation of *The Life of Milarepa*. See Lhalungpa 1977, xxx.
about how Tibetan authors understood the biographical enterprise, what such literature required, and how it might be presented. It is hoped that this will lead us to further interrogate the ways in which Tibetan authors employ the terminology of literary genres, and how we might develop a more nuanced understanding of them.

To that end, a few broad observations will be of use before turning to the author and his work. The lines dividing Tibetan literary genres are neither clearly defined nor indelibly drawn; they blur even further when comparing works of biography and religious history. While a more detailed discussion of the fluid nature of Tibetan genre categories is beyond the scope of the present paper, there is some evidence that Zhi byed ri pa may have self-consciously conflated narrative modes witnessed in other works of Mi la ras pa’s biographical tradition from the same period. Although the author adopts in his title the term for biography most often associated with the Mi la corpus (rnam thar), the text consists of a simple and highly abbreviated narrative core describing the life story proper surrounded by an extensive yet discrete body of secondary historical and literary information. The result is a record of Mi la ras pa’s life unlike any other in the corpus.

Zhi byed ri pa refers to the work as a “biographical record” or collection of “biographical documents” (yig cha rnam thar), perhaps in reference to the variety of information it contains. Indeed, with the text’s attention to lineage records and chronological analysis the term appears to mark an emphasis on a historical rather than the more fictional approach to life writing encountered in many other versions and culminating in Gtsang smyon Heruka’s literary masterpiece. Even Zhi byed ri pa’s fictionalized narratives, especially those describing of Mi la’s early life, seem to stress a documentary approach to life writing.

Indeed, at one point early on, Zhi byed ri pa refers to the text as a “historical account of the lama widely renowned by the name Mi la ras pa,” (bla ma mi la ras pa zhes mtshan yongs su grags pa de’i lo rgyus) and in several instances describes it as a rnam thar lo rgyus, a term that might be translated as “historical biography.” The use of the term lo rgyus in this context is of particular interest and while its translation here as “history” or “historical” may be controversial it is, I think, not unwarranted. The word has been rendered variously as “history,” “chronicle,” and “annals,” in some cases it

---

5 Tibetan literature, it is now generally understood, knows of no single term that translates the entire semantic range of broad genre categories such as “history” or “biography,” or for that matter, the notion of “genre” more generally. See, for example, the discussion in Cabezón and Jackson (1996, 20ff.).

4 It is well known but perhaps worth reiterating that rnam thar is only one of many terms used to designate forms of Tibetan life writing. Others include rang rnam (autobiographies); rtogs brjod, a term translating the Sanskrit avadāna (literally “expressions of realization” but perhaps rendered here more generally as “biographical narratives”); skyes rabs/’khrungs rabs (accounts of previous lives, lineage biographies), and byung ba brjod pa (literally “descriptions of [family] origins,” perhaps rendered as “personal histories”). We might further consider various forms of daily chronicles and diary writing as autobiographical in nature. On the latter, see Gyatso 1997.

5 I use the term “fictional” here after Natalie Davis, referring not to the story’s falsity but to its coherent and crafted sense of narrative development. See Natalie Davis, Fiction in the Archives (Stanford University Press, 1987), 3.

6 NDO, 41. See the colophon translated in Appendix 1.
is better understood more generally as “story” or “account.” Leonard van der Kuijp has noted that the term—in his rendering, literally “tidings of the year[s]”—frequently refers to works that “do not fulfill what is promised by such a rendition, that is to say, they do not at all give a year-by-year account of their subject matter, but rather present a narrative of events, historical, quasi-historical, or even ahistorical, in rough chronological sequence.” Dan Martin makes a similar point, invoking A. I. Vostrikov’s classic study *Tibetan Historical Literature*, which is worth citing in full:

> Lo-rgyus (‘history’ or “story,’ although in its etymology it apparently means ‘years familiarity’)…is by far the broadest genre-term that we might translate as ‘history,’ covering as it does both the secular and the religious, but as pointed out long ago by Vostrikov (THL, p. 204), *lo-rgyus* are often simply narrative works, or ‘stories,’ that may have little to do with history as such.\(^7\)

The term *lo rgyus* is also found in the titles of some biographical works, where indeed it seems to imply a narrative account in the most general sense. I do not wish to make a general claim here on the semantic range of the compound *rnam thar lo rgyus*, although I will later return briefly to the question of this term and the category of writing it might describe. Here, I will simply note that Zhi byed ri pa’s emphasis does not seem to rest on understanding *lo rgyus* as simply “story” or “narrative.” The *rnam thar lo rgyus* is not simply a collection of “biographical anecdotes.” Rather, he uses the term to make a specific claim on the veracity, and therefore the authenticity and authority, of his biographical account vis-à-vis the wider biographical tradition.

**II. The Author**

Little is known about Zhi byed ri pa apart from the information he presents in the text itself. Near the end of his work, he notes, “Just after I was born, when I was eleven months old, I received Rje btsun Mi la ras chen’s songs of realization from my kind mother. Thereafter, for fifty-three years I systematically requested Rje btsun Mi la ras chen’s dharma cycles, his biography, and collected songs….”\(^9\) This would make him at least fifty-four years old (fifty-five according to Tibetan reckoning) when he wrote the text in 1373. Zhi byed ri pa was thus likely born sometime around 1320.

The author frequently identifies himself as a Śākya bhiksu, referring to his status as a fully ordained monk, and also as G.yung ston, “the teacher from

---

\(^7\) van der Kuijp 1995, 43.

\(^8\) Martin 1997, 14-15.

\(^9\) Zhi byed ri pa, NDO, 44. de yang thog mar skyes nas zla ba bcu gcig lon tsa na ma sku drin can de’i drung na rje btsun mi la ras chen gyi migur rnam thob de nas lo rgyo gsum pa’i dus na . . . The passage continues by recording his sources for Mi la ras pa’s doctrinal and biographical traditions. See note 24 below.
G.yung,” emphasizing his status as a scholar.\textsuperscript{10} Indeed, he describes his accomplishments as a student of the Buddha’s teachings in no uncertain terms when he declares, “In general, among the Victor’s teachings—sūtras, tantras, oral transmissions, and instructions—as many as exist in India, China, and Tibet, there are none that I have not seen or heard.”\textsuperscript{11} The author, however, most consistently uses the name Zhi byed ri khrod pa, the mendicant (ri khrod pa) of the Zhi byed lineage. The name Zhi byed ras pa, occasionally seen in references to this work, appears to be a corruption of the abbreviated form Zhi byed ri pa.

Hyperbole aside, the author does appear to have trained under a great number of religious masters representing a broad range of lineages and traditions. But he identifies himself most closely with the early masters of the Sa skya and Bka’ brgyud transmissions. In several instances, he describes the way in which he received the transmissions of Pacification (zhi byed), from which his name is derived, and Severance (gcod), as well as the Sa skya Path and Fruition (lam ’bras) instructions.\textsuperscript{12} He repeatedly refers to the Powerful Lord of Hermits Mani pa, who may perhaps be identified with the Sa skya master Legs pa rgyal mtshan.\textsuperscript{13} He pays special attention to his reception of and dedication to the Bka’ brgyud aural transmissions (snyan brgyud) stemming from Mi la ras pa’s disciples Ras chung pa Rdo rje grags (1085-1161) and Ngan rdzong Byang chub rgyal po (b. 11th century). He also notes that he received instructions directly from Gzi brjid rgyal mtshan (1290-1360), an important figure in the Ras chung snyan brgyud transmission lineage.\textsuperscript{14} The author later records his place in a number of tantric transmission lineages, many of which have their Tibetan origins in the early Bka’ brgyud masters Mi la ras pa, Ras chung pa, and their followers. (See Appendix 2.)

Zhi byed ri pa also appears to have encountered a number of influential religious figures of his day, including the founding ruler of the Phag mo gru hegemony Ta’i Si tu Byang chub rgyal mtshan (1302-1364).\textsuperscript{15} He also met with the renowned Sa skya master Kun dga’ rgyal mtshan Dpal bzang po (1310-1358), the first incarnation of the Sa skya Lha khang bla brang and the twelfth Ti shri prelate who apparently vouched for the author’s credentials

\textsuperscript{10} He should not, however, be confused with G.yung ston Rdo rje dpal (1284-1365), a disciple of the third Karma pa Rang byung rdo rje (1284-1339), whose dates are incompatible with those of this text. See Roerich 1949, 149ff, 493.

\textsuperscript{11} Zhi byed ri pa, NDO, 44. sphyin yang rgya gar nag bod gsum du ‘gyur tshad kyi rgyal ba’i bka’ mdos rgyud lung man ngag gi rigs la nger ma mthong ba dang ma thos pa tsam med…. He later repeats this claim in the colophon.

\textsuperscript{12} See, for example, his statements in the colophon, translated in Appendix 1.

\textsuperscript{13} See TBRC database (P4022). However, Zhi byed ri pa later lists Mani pa as a member of an unidentified snyan brgyud transmission line following Gzi brjid rgyal mtshan, described below.

\textsuperscript{14} Gzi brjid rgyal mtshan is the author of one biography, and the subject of another, in the Snyan brgyud yig cha of Byang chub bzang po. See Byang chub bzang po, DKN, vol. 1. The dates tentatively provided for him in that publication (1230-1300) appear to be off by one sixty-year cycle. In order to fit with Zhi byed ri pa’s dates, they should be corrected to 1290-1360, which corroborates the evidence provided in Roberts 2007, 52.

\textsuperscript{15} On the life of Ta’i Si tu Byang chub rgyal mtshan (1302-1364), see see van der Kuijp 1991, 1994, 2001.
and helped inspire his biographical project. Zhi byed ri pa records his meeting with this Sa skya lama in the following way:

... Then at Dpal Din ri Glang skor [Kun dga’ rgyal mtshan] took my hand in his and said, ‘From Gangs Ti se to Ri bo rtse Inga in China, there is no one with a greater knowledge of Lama Rje btsun Mi la ras chen’s life story and history than you. Therefore, you should set down an extensive biographical record (yig cha rnam thar) about him.’ Thus he urged me with great insistence.

III. The Text

Zhi byed ri pa notes that he completed the text in the southern border region of Skyid grong while residing in the hermitage called Gra’i rtse mo ngang. He dates the composition to the eight day of the waxing moon of the horse month of the water-ox year (chu glang lo), 269 years after Mi la ras pa’s death. Only the year 1373 plausibly fits both with the time frame of Mi la ras pa’s life and the dates of Zhi byed ri pa’s teachers. The text was thus completed in 1373 and then, according to the colophon, revised eight years later in 1381.

The author famously claims to have seen 127 different versions of Mi la ras pa’s life story, but he appears to have relied on two principal sources in crafting his study, neither of which has yet come to light. In the colophon, he notes:

In general, I have seen some one hundred and twenty-seven different attempts at the biography of Mid la ras chen. In particular, I have made [my version] taking as a basis the accounts of (1) Lord Khyung tshang pa Jñānaguru, and (2) the Dharma Lord Zhang Lotsāwa Grub pa dpal bzang who is unmistaken in his knowledge of the five sciences.

Zhi byed ri pa repeatedly refers to these two masters throughout his study. The first, Khyung tshang pa Ye shes bla ma (1115–1176), is counted among

---

16 Little seems to be known of this individual’s life; the most extensive known account of his activities has been described as “miserably short.” See van der Kuijp 2004, 28. A brief biographical sketch is recorded in Grags pa ’byung gnas and Blo bzang mkhas grub, MD, 705.

17 Zhi bye ri pa, NDO, 41. See Appendix 1.

18 The horse month (rta zla) refers both to the fifth lunar month in the Tibetan calendar, as well as the period from the sixteenth day of the twelfth month to the fifteenth day of the first month of the new year. An extended examination of Mi la ras pa’s dates is beyond the scope of the present discussion, but I am currently preparing a detailed study of the confusion within the tradition surrounding the yogin’s chronology. See Quintman forthcoming b.

19 Zhi byed ri pa, NDO, 42. spa’ris mid la ras chen gyi rnam thar la mdzad pa mi cig pa bposa dang nge sdu rtsa bdon rnam mthong ba dang | khya’d par du rje khyung tshang ba dnya na gu ru dang | lnga rig shes bya’i gnas la ma rmoon pa | chos rje zhang lo tsha’ ba grub pa dpal zang po dang | de rnam sbyi gaung gos la gzhis blangs nas byas pa la sg ings .
Ras chung pa’s closest disciples. The Blue Annals (Deb gter sngon po, completed 1478) recounts Mi la ras pa’s life based in part upon Khyung tshang pa’s account, indicating that the latter was still considered an authoritative work even a century after Zhi byed ri pa’s remarks, and a mere decade prior to Gtsang smyon Heruka’s completion of Mi la ras pa’s standard Life and Songs. Zhang Lotsāwa himself codified several lines of the Ras chung snyan brgyud transmitted by three of Khyung tshang pa’s principal disciples. The two works that appear to underlie much of the Illuminating Lamp thus represent some of the earliest, though unrecovered, sources in Mi la ras pa’s biographical tradition.

Zhi byed ri pa further refers to the literary work of one Byang chub rgyal mtshan, an unidentified individual described simply as a teacher the line of aural transmissions (snyan brgyud ston pa). In certain cases, the author seems to draw upon the work of Don mo ri pa (b. 1203), whose writings were compiled in the mid-fourteenth century. Zhi byed ri pa also claims to have relied heavily upon oral accounts from living masters, including members of the most important Bka’ brgyud religious institutions of the day.

The close ties between the Illuminating Lamp and the early Bka’ brgyud aural transmission lineages witnessed here is no accident. Much of the early literature of Mi la ras pa’s biographical tradition explicitly identifies itself as part of the aural transmission cycles. Indeed, Zhi byed ri pa here explicitly

---

20 On his life, see Roerich 1949, 441-443.
21 Roerich 1949, 435.
22 Zhi byed ri pa, NDO, 6. In Byang chub rgyal mtshan’s account, upon meeting Mar pa for the first time Mi la ras pa presents offerings of balls of hard molasses and a fine woolen blanket. After recording this narrative fragment, Zhi byed ri pa comments, “But he likely did not have anything to offer.”
23 Don mo ri pa’s account appears in the collection of biographies by Rdo rje bdzes ‘od, a ‘Bri gung master active in the fourteenth century. See Don mo ri pa, JMN. On Rdo rje mdzes ‘od, see Roberts 2007, 9.
24 Zhi byed ri pa, NDO, 44. Zhi byed ri pa includes the following individuals among his sources: Bla ma ri pa Dkon rgyal, Bla ma ri pa Padma dbang po, Bla ma ri pa Byang bsod pa, Ri s pad ye ba, Bla ma Nam mkha’ snying po, protector of beings Thugs rje ye shes, Bla ma Chu ras pa, Chu dbon pa, Hor dkar reg bshes, Lha rje bde ba, Ri ri Dbang bzang, Bla ma Bde mchog dpal, Bla ma Rgyal dgon pa, Dge bshes Stabs dgon pa, Bla ma Nam mkha’ rdo rje, the abbot of the glorious monastic seat of Sho dgon pa, La pa mkhan chen, Dge bshes Gu ru mdo pa, the Stag lung bla ma ‘De bde ba, Bla ma Kam tshang Byal ba dpal, Bla ma Ru shal ba, Lama Nam dgod pa, the kind Dpal sgra ras chen, the kind Bla ma Geod pa, the Karma pa’i ri pa Dge ‘dun gzhon nu, Dge bshes Ye ’bum, Dge bshes Sher bzang, Rgu lung dge bshes, Ras pa Bzang rna ba, Bla ma Mog ston ‘Jam pa’i dbyangs, and Bla ma Lha stong ro dpon. He concludes this list by noting, “I had detailed discussions about this with the precious teachers of Karma, Brag mkhar, Sga lung, Sprung [spung] ri, Yul phug, Rta rna, ‘Bri khung, ‘Tshal gung thang, Mthur phu, and ‘Ur ri [monasteries], as well as scholars and their assembly of disciples such as Ri dge. We have [discussed these matters] in detail.”
25 The earliest of Mi la ras pa’s great biographical compendia, the so-called Twelve Great Disciples (Bu chen bcu gnyis), concludes with the statement “This Transmission Wish Fulfilling Gem / of the Cakrasaṃvara Aural Tantra / Has been put into writing according to the lama’s words / for fear that it might be forgotten by those of inferior minds / for future holders of the family line.” See Ngan rdzongs ston pa Byang chub rgyal po, BCN, 243b.1 Here the “Transmission Wish Fulfilling Gem” refers to the first of three main divisions of the aural tantra curricula, a collection of literature devoted to recording the
follows this tradition, concluding his work with the following remark: “The bhikṣu Zhi byed ri khrod pa has finished laying out the lineage of masters of the of the Wish Fulfilling Gem Aural Tantra and the activities of the Great rje btsun Mi la ras chen and his sons.”

If Zhe byed ri pa’s *Illuminating Lamp* reached the hands of contemporary scholars only recently, it seems to have gained widespread acceptance by Tibetan authors as an authoritative work soon after its completion. And there is strong evidence that it maintained its influential status long after Gtsang smyon Heruka’s standard *Life and Songs* were published. One early comprehensive biography of Mi la ras pa, tentatively dated to the late fourteenth to mid-fifteenth centuries, identifies Zhi byed ri pa’s text as one of its three principal sources. The *Illuminating Lamp* seems, however, to have served more frequently as a source for historians than for biographers per se. One of the earliest works to reference this text may be *Brilliant Light Rays Opening the Eyes* (*Mig ‘byed ‘od stong*), an important Bka’ brgyud history composed in 1418 by Bsod nams rgyal mtshan dpal bzang po (1386-1434), an abbot of Gdan sa thel Monastery. The influential ‘Brug pa Bka’ brgyud historian Padma dkar po (1527-1592) relied on the *Illuminating Lamp* for the brief biographical sketch of Mi la ras pa in his History of the ‘Brug pa (*’Brug pa’i chos ’byung*), completed in 1581. The supplement (*kha skong*) to Si tu Paṇ chen Chos kyi byung gnas’s (1699/1700-1774) extensive Bka’ brgyud history *The Fine Crystaline Gem* (Nor bu zla ba chu shel) refers to Zhi byed ri pa and his work directly. Kah thog rigs ’dzin Tshe dbang nor bu (1698-1755) includes Zhi byed ri pa’s calculation of the yogin’s birth year in his chronological study of several early Tibetan figures, including Mar pa and Mi la ras pa. Tshe dbang nor bu’s disciple and historian Brag dkar Chos kyi dbang phyug (1775-1837) mentions having seen a synopsis of Zhi byed ri pa’s work in the biography of Sgam smyon Phyah rdo r je nor bu (active 17th century), who in turn saw a copy of the text in the famed retreat center in Chu bar.

*Revue d’Etudes Tibétaines*
IV. The Story

The narrative core of Zhi byed ri pa’s text, though brief, generally conforms to the structures found in the earliest strata of the biographical tradition, forming what may be understood as a proto-*rnam mgur*—an early form of combined biography (*rnam thar*) and song anthology (*mgur ‘bum*). Such works employ a brief biographical sketch of the early life and the final passing (proto-*rnam thar*) to frame a series of abbreviated anecdotes recording songs or, more frequently, song fragments (proto-*mgur ‘bum*) from the yogin’s later teaching career. As with most proto-*rnam mgur* texts, here the yogin’s life is organized around an outline identifying two broad qualities (*yon tan*) evident in the life story: (1) the quality of his family lineage (*rigs dang rus kyi yon tan*) describing the period of his childhood, early religious training, and first retreats, and (2) the quality of his practicing austerities for the sake of dharma (*chos phyir dka’ ba spya’i yon tan*), which recounts various episodes of his life as wandering yogin. The latter section is further divided into seventeen “qualities,” each each of which records several song-cycle fragments. (See Appendix 3.) Zhi byed ri pa concludes the proto-*rnam thar* with an extensive account of Mi la ras pa’s poisoning and death, finally recording that,

> On the fourteenth day of the tiger month of a bird year, just as the sun was rising on the peaks of the mountains, Mid la ras chen, universally known as lama rje btsun Mi la, Lord of Yogins, Dpal Bzhad pa’i rdo rje, departed into the dharmadhātu. He was eighty-four years old.

Of particular note in this narrative section is Zhi byed ri pa’s extensive description of Mi la ras pa’s youth and the misfortunes he suffered at the hands of his relatives, which constitutes nearly half of the core narrative. Many works in the early biographical tradition treat the yogin’s childhood in perfunctory fashion, describing the events in only a few lines; others leave out the episode altogether. Here, the author sets forth in painstaking detail the anguish Mi la ras pa suffers at the hands of his relatives. Moreover, Zhi byed ri pa’s text is perhaps the only version of the life story to provide a substantive rationale for the infamous conflict between the maternal and paternal sides of his family. The episode is rich in ethnographic details about social and marital relations in early Tibet. A complete translation is provided.

---

33 Here, I use the term *proto* in its sense of “an early or preceding state of development,” specifically locating such works as precursors to the larger, more mature biographical compendia produced later in the tradition. This form was widespread throughout Mi la ras pa’s biographical tradition. It should be noted, however, that proto-*rnam mgur* texts continued to appear long after the biographical tradition had coalesced. In these cases, *proto* refers instead to the truncated structure of such works, regardless of when they were actually produced.

34 Zhi byed ri pa, NDO, 40. bya’i lo rta pa zla ba’i ye tshes bcu bzhis’i nji ma rjte la se lhag shar ba dang la dus kha mnyam pa la bla ma rje btsun mi la rnal ’byor dbang phyug la dpal ldan bzhad pa’i rdo rje mtsan yongs su gra’gs pa’i mid la ras chen de’ choe kyi dbhyes su gelega so’i dgyung lo bco brgya bcu rtisa bzhi pa yin no’. phug elsewhere identifies him as a reincarnation of Mi la ras pa’s disciple Bse ban ras pa. Thanks to Ben Bogin for this reference. See Chos kyi dbang phug, DKS, 51.
in Appendix 4. Although an extended analysis of this material lies beyond the scope of the present study, it is taken up in the subsequent short essay “Marriage, Kinship, and Inheritance in Zhi byed ri pa’s Account of Milarepa’s Early Life.” What follows is a brief summary.

In Zhi byed ri pa’s reckoning, the family wealth had been split between the two brothers of Mi la ras pa’s paternal side—that is, Mi la’s father Sher rgyal and his paternal uncle Rin rgyal. The first share went to the yogin’s uncle, who was older, married earlier, and thus had a larger family by the time the father came of age. When Mi la ras pa’s father Sher rgyal turned eighteen, he received the family’s remaining assets. Rin rgyal’s wife (the infamous aunt) appears to have been dissatisfied with these arrangements, arguing that her own family was larger and thus deserving a greater share. When the father died, the uncle planned to marry Mi la ras pa’s mother to his son (i.e., the mother’s nephew through marriage), as a means of keeping the family’s estate intact.35 This appears to have been a traditional practice in the region at that time. Indignant at this request, the mother refuses. Uncle Rin rgyal then appropriates the mother’s material wealth that, in his view, should have rightfully returned to his household. Mi la’s family is thus cast into a life of poverty and servitude. At one point, after they have become destitute, Mi la suggests to his mother that they would all be better off if she would comply with local conventions: “You, mother, could live with Uncle’s son, and you could obtain a share of his possessions. Then we, mother and children, would have the strength to escape on our own. Wouldn’t it be better if you did that?” The mother replies by throwing a handful of dirt in her son’s face, screaming, “If I lived with Rin rgyal’s son, when the time came for me to take a share of his possessions I would be carrying another child, and you two—brother and sister—would starve to death, wouldn’t you?” The point seems to be that the extended family and local villagers clearly view the mother’s actions as contravening traditional social relations and thus she is thought to deserve the fate that befalls her and her children. This stands in marked contrast to Gtsang smyon Heruka’s standard version in which Mi la and his family are cast simply, if more poignantly, as the unwitting victims of their relatives’ avarice.

This episode gives a clear indication of Zhi byed ri pa’s concerns. The author is careful to document with great precision the origin of the yogin’s family conflict even when it serves no clear didactic or narrative goal. In doing so, his version preserves an unprecedented record of Mi la ras pa’s early life. Indeed, eminent historians such as Padma dkar po and Si tu Paṇchen refer to this seminal episode in the context of their extensive studies of the Bka’ brgyud lineage. One contemporary Tibetan scholar displayed his surprise to me upon reading this work noting that, unlike the standard version, “Everything happens for a clear reason with clear causes.” But this

35 Polygyny became normative in Tibet beginning in the seventeenth century, in association with the land tenure system instituted under the Dga’ Idan pho brang. (Personal communication, Geoff Childs, May 2011.) However, I know of no examples describing this particular kind of arrangement, perhaps a form of levirate marriage in which the nephew (i.e., the brother’s son) takes the place of the brother. See Stein 1972, 98; Childs 2004, 135-9. According to the Blue Annals (Roerich 1949, 427), the arrangement was an actual levirate marriage in which Mi la’s mother was forced to marry her deceased husband’s brother.
is the sort of detail that would bog down the elegant narrative in Gtsang smyon Heruka’s rendition of Mi la ras pa’s life. In his canonical version, Gtsang smyon replaces this extended account with the simple gloss, “My uncle and aunt never agreed but were reconciled in their greed, and I was an only son while my uncle had many sons.”36 Zhi byed ri pa here fills the role of genealogist, more interested in the comprehensive accumulation of granular detail than the crafting of narrative through character development or story arc.

With this episode of Mi la ras pa’s early life completed, Zhi byed ri pa abandons all pretense of narrative life writing altogether, turning instead to a long string of discrete story fragments joined together without transition. Some of these accounts attack what the author appears to view as scurrilous oral tradition; others add minor points of clarification to well-known episodes in the yogin’s life. Almost none of Zhi byed ri pa’s extensive record appears in the later biographical tradition or in Gtsang smyon Heruka’s standard version of the Life.

First among his many fascinating claims are the descriptions of the places Mi la ras pa visited. Apart from many of the locations well known in the biographical tradition, he is said to have traveled to Tsong kha in Smad where he met the King Dar ma ‘bum.37 Zhi byed ri pa also records a curious conversation between Mi la and Ras chung pa, describing the yogin’s travels to India:

When [Mi la] was imparting the vase initiation of the five families Vajrasattva to Ras chung pa, Ras chung pa asked, “How many times did the Rje btsun go to India?”

“Six times,” replied [Mi la ras pa].

“During those times, what sort of buddhas or accomplished masters did you meet?”

“The first time, I met Master Ārya Nāgārjuna in pure vision and I received many dharma teachings on Madhyamaka and so forth. The second time, I met Ārya Āryadeva in Sri Lanka and he taught the pāramitās. During the third trip, I met the great master Lawapa on the banks of the Gāṅga in India and he taught “phenomena like an illusion.” During the fourth trip, I met Candrakīrti and he taught the sādhana for Mārīcī Devī (lha mo ’od zer can). During the fifth trip, I met Matangi and he taught on Amoghapāśa. The sixth trip, I met Dombipa and he gave the instructions on the Path and Fruition of the Powerful Lord of Yogins, the glorious Birwapa.”

Ras chung pa asked in response, “Did the Rje btsun travel by means of miraculous manifestation or did he actually go himself?”

Mi la replied, “Whatever you like to believe is okay.” 38

Zhi byed ri pa repeatedly argues against what appears to have been an oral tradition critical of Mi la ras pa. In several places he counters the notion that the yogin survived as something of an outlaw: “Some people say that lama Mi la was a thief or a bandit between Mang [yul] and Gung [thang], but those are foolish stories.”  

The author later repeats this criticism adding a brief timeline of the yogin’s life as further proof of the claim’s implausibility:

Some foolish people tell absurd stories that the great Rje btsun acted as a bandit and thief between Mang [yul] and Gung [thang]. Such are crazy stories of those whose merit has been exhausted.

The Rje btsun was three years and four months old when his father died, and then lived with his mother until he was seven. He lived with Dge bshes Tsa pa for seven years and then again with his mother for four years. In his eighteenth year he went to Rta nag and Yar lungs, and he stayed practicing magic for eight years. He spent one year with ‘Dre ston lha dga’ and other gurus. He stayed in Lho brag for nine years. He spent a little over a year in Gzhung [with Rngog]. He spent a winter in Tswa, and twelve years at Brag dkar. From the age of fifty he worked for the benefit of beings. At the age of eighty-four, he departed into the pure dharmadhātu.

Where in those periods could he have acted as a bandit or in a deceitful way? This outline of Mid la ras chen’s biography has been written down by the bhikṣu Zhi byed ri khrod pa.

In other cases, he is concerned with clarifying oral accounts of what appear to be minor, perhaps even trivial, details:

That Rje btsun Mi la ras pa requested the sādhana of Glorious Vajrasattva together with its oral instructions from the guru Ba ri Lotsāwa is a crazy story spread by everyone. It is said that the young man Zhi ba ‘od crossed the Bong River (Bong chu) and that Rje btsun

---

39 Ibid., 3.

40 Ibid., 29.

---
Between History and Biography

Mi la rode on the rear of his horse, but people who say that are crazy. What would be the point of crossing the Bong River to go south from Chu mig dngulbum? One would need to cross the Ra River (Ra chu). Those who tell crazy stories without checking them even once are laughable.41

Another interesting point of contention Zhi byed ri pa wrestles with is the question of Mi la ras pa’s sexual activity. In one instance he records an exchange between the yogin and his disciple ’Bri sgom ras pa:

’Bri sgom ras pa said to the Rje btsun, “People say that Lord Mar pa’s wife Lady Bdag med ma and Lama Rngog gzhung pa’s lady gave the mandalas of their bodies to the Rje btsun. It that true or not? The Rje btsun replied, “The talk of bad people and the whirlwinds of spring have no stable point of reference. If you have such thoughts about me, you’ll bring about the dākinis’ punishment.”42

Zhi byed ri pa comments on this directly, arguing against what appears to have circulated as part of an oral tradition:

Some people ask, “Did Lady Bdag med ma gave her body to Mi la ras pa?” but such conjecture is foolish talk. When Rje btsun Mi la was fifty-three he had the powerful lady of [long] life and so forth, emanation heroines, for physical consorts (phyag rgya rten). Did he rely upon any human women prior to that time? He said that up to that point he was untainted by sexual activity.43

Zhi byed ri pa also comments on Mi la’s physical appearance, near the end of the text while describing the visualization for ritual practices commemorating the yogin’s life. It is an unflattering portrait, at odds with the pious iconography that would become standard following Gtsang smyon Heruka’s work:

Yearly offerings should be made on the fourteenth day of the waxing period of the horse month. If you wish to visualize him in meditation: On a squarish body, not really tall, he has a round face with a flat nose, narrow eyes, bloodshot and glistening. His hair goes

---

41 Ibid., 30.
42 Ibid., 33.
43 Ibid., 7.
straight up and back from his hairline. His teeth, from corner to corner, are even and bluish-white. There are moles half the size of beans on the left and right sides of his face. His hair is brown on yellowing-black [?]. His flesh is dark green but with a ruddy complexion. Since this description is genuine, anyone who adds or takes away anything in an improper manner, or does anything falsely without basis in tradition, will have his bloody heart torn out by Mahākāla with his iron chopper.44

The final line of this passage seems to elevate the proper recording of historical detail to the level of samaya, a sacred commitment whose transgression will entail the wrathful punishment of the dharma protectors.

Finally, Zhi bye ri pa devotes a good portion of his text to recording various transmission lineages, frequently instruction cycles that originate with the Bka’ brgyud founders and culminate in the author himself. As we have seen, he is even careful to record the lineage through which he received the transmission of Mi la ras pa’s life story itself. The story thus also serves in part as autobiography, recording its subject’s life while simultaneously documenting the author’s own credentials as biographer.

Among the rare pieces of information Zhi byed ri pa records is a transmission history of the songs and stories that Mi la sang in his early years.45 These were not the songs of realization (mgur) for which the yogin became famous later in his life, but the traditional Tibetan tunes he learned in his youth. After surveying the subject and titles for many of these stories and songs, Zhi byed ri pa describes the transmission lineage for the song books (glu yig) that transcribe either the titles or perhaps the songs themselves. These texts appear to have circulated widely among the masters of the early Bka’ brgyud lineage, and continued to be passed down in the period leading up to Zhi byed ri pa’s writing. Regarding their transmission, Zhi byed ri pa states:

An old woman from Lcags yul living in Lho brag had his song books (glu yig) and she offered them to Rje btsun Ras chung pa rdo rje grags pa. He gave them to Lord Khyung tshang pa, who gave them to Ma cig ong jo, Mar ston tshul ’byung, and Star sgom Zhig po. All three of them gave them to Dharma Lord Zhang pan chen, who gave them to Dhara shri, who gave them to ‘Gro mgon Bsod rgyal, Drin can ras ma, and Dharma Lord Bde legs rin chen. The two relatives (ne dbon) gave them to Lama Gzi brjid rgyal mtshan, who gave them to Lama

45 Ibid., 50, thog mar mi la thos pa dag | glu sgrungs blang pa’i lo rgyus.
Skye mchog chen po Manipa, who gave them to [me] the Śākyabhikṣu Zhi byed ri khrod pa.

‘Gro mgon Rtsang pa rgya ras pa, Dharma Lord Rgod tshang pa, and Dharma Lord Lo ras pa, all three masters, found them in Lho brag and gave them to the accomplished master Me long rdo rje. [They then passed to] his son Blo ldan seng ge, the accomplished master O rgyan pa, and Dbu mdzad Bkra shis dpal. There is also a lineage from them.

Lord Khyung tshang pa gave them to Kams pa Dar ma dpal, who then gave them to ‘Dul dkar ba bla ma Ro bhe ba. Lord Khyung tshang pa also gave them to Rje btsun Mnga’ rigs pa Ye shes grags, who gave them to Zhig po rdo rje, who gave them to Rog rab ‘od zer, who gave them to the accomplished master O rgyan pa, who gave them to Dharma Lord Kun dga’ don grub, who gave them to Lord Las stod pa, Mkhas btsun Bsdod ‘od, and Lama Zla seng.

At first, I considered such things unimportant and so did not pursue them. Later, Gzi brjid rgyal mtshan, Lama Skyes mchog chen Manipa, and Lord La stod pa, the scholar-adept, said that they were indispensable for [writing] Mi la ras chen’s biography. I then eagerly received [the transmissions] from them.

[In another lineage, the transmission passed through] Rje btsun Ras chung pa, Dwags po lha rje pa, Dags po sgom tshul, and Zhang g.yu brag, who gave them to both Rtogs ldan Jo gdan rin ring and Glorious Phag mo gru pa Rdo rje rgyal po. Dharma Lord ‘Bri lung pa requested them from both of these masters and passed them to Dbon rin po che, Rin sing pa, Ratnaśri, and Lama Bsam gtan byang chub. Lama Skye mchog Manipa requested them from both of these masters, and he gave them to [me] Zhi byed ri khrod pa.46

46 Ibid, 50.
Here, it is not only religious instructions that require a record of transmission. Even the catalogue of folk songs Mi la ras pa is said to have sung as young child rises to the level of sacred literature, “indispensable” for the accurate documentation of the yogin’s life story.

V. Reflections on History, Biography, and Historical Biography

I would like to conclude here with a few brief remarks on how Zhi byed ri pa might have located his own work vis-à-vis the corpus of Mi la ras pa’s biographical tradition, and perhaps the genre of rnam thar more generally. To reiterate the preceding discussion, the Illuminating Lamp does not follow the narrative conventions witnessed in other examples of life writing produced around the same time. Indeed, Zhi byed ri pa’s text clearly emphasizes unvarnished documentation over crafted narrative exposition, so that is reads more like a collection of discrete historical notes than a life story per se. This raises several questions: Is Zhi byed ri pa’s departure in style and approach meaningful—that is, does it represent a conscious effort to reimagine the function of rnam thar, at least within Mi la ras pa’s biographical tradition? And if so, what can it tell us about the way that Tibetan authors such as Zhi byed ri pa use certain Tibetan terms for marking particular forms of literature?

To start, I would like to suggest that the unusual features of Zhi byed ri pa’s text indeed point to a unique approach to life writing, one that deviates from that found in, say, Mi la ras pa’s biographical compendia or in the well-known standard version. In some respects, the author’s emphasis on the myriad details and general disinterest for the literary craft of story telling reflect the form of proto-rnam mgur described earlier. As noted above, one portion of the Illuminating Lamp follows the model of such works, copying the structure of other proto-rnam mgur. However, such texts usually form part of a combined lineage record, recording a single bead in the string of a so-called golden rosary (gsar ‘phreng) of lineage masters. Zhi byed ri pa’s work is instead a long autonomous text constituting a meta-reflection on the biographical tradition itself. The Illuminating Lamp is less a biography than a critique, clarification, and correction of Mi la ras pa’s extant biographical record. Where biography may serve a variety of programmatic agendas—legitimating an important founding figure, authorizing a lineage of doctrinal instructions, or even inspiring followers to practice the path of liberation—the Illuminating Lamp is meant primarily to “get the facts straight” (at least as the author sees them) and to provide his credentials for doing so. It thus diverges significantly from other proto-rnam mgur works in terms of both form and function.

To consider the second question, how Zhi byed ri pa defines his own text, we need to return to the descriptive terms mentioned earlier: rnam thar lo

47 In addition to comprehensive versions of the yogin’s life story such as The Twelve Great Disciples and various forms of the so-called The Black Treasury, mention might also be made of the extended narrative by the second Zhwa dmar Mkha’ ’chod dbang po (1350-1405), Zhi byed ri pa’s contemporary.
rgyus, which I have chosen to translate in this context as “historical biography.” As noted in the introduction, I do not want to generalize too broadly about the intended meaning of either lo rgyus or rnam thar lo rgyus. It remains to be seen how such compound genre designations function in other literary works and during other periods. But in this text at least, it seems clear that Zhi byed ri pa uses the term in order affirm the veracity and legitimacy of his account vis-à-vis the rest of Mi la ras pa’s biographical tradition.

For brevity’s sake, a single episode from the life story should suffice to foreground Zhi byed ri pa’s position: Mi la ras pa’s loss of patrimony in his youth at the hands of his paternal relatives, an event discussed above. In Gtsang smyon Heruka’s standard version, this scene forms an emotional turning point in the story crafted for maximum dramatic effect. But as characters, the aunt and uncle seem formulaic; in Gtsang smyon’s words the pair were simply “reconciled in their greed.” Their rapaciousness is more a textbook model for the workings of kleśas than the product of genuine human interaction. Indeed, the entire scene appears to serve a single narrative conceit: to propel the yogin-to-be along a new path, first in the direction of black magic, and ultimately toward his guru Marpa. The yogin’s later career can then be understood retrospectively as a model for escaping the misery of samsāra through the purification of negative karma. Gtsang smyon Heruka has effectively “fictionalized” the account of Mi la ras pa’s life, stretching what may have been known about the yogin’s childhood in order to craft a more elegant—and expedient—narrative.

For Zhi byed ri pa, however, this period of the yogin’s life serves neither as a morality tale nor a metaphor for the workings of karma. There is no sense of the author “stretching the truth” as a function of either literary prowess or skillful means. Rather, the Illuminating Lamp forms an elaborate and exacting accounting of social and marital relations, describing their effects on a female actor (the mother) who disregards prevailing social norms. The author, in short, appears more concerned with documenting the cause of Mi la ras pa’s misfortune than with establishing a coherent narrative arc. Where Gtsang smyon Heruka’s version (the rnam thar) forms an evocative tale, Zhi byed ri pa’s account (the rnam thar lo rgyus) is a historian’s reckoning. The relationship between rnam thar and rnam thar lo rgyus, in this case at least, seems close to that posited elsewhere between biography (rnam thar) and religious history (chos ’byung), with each serving different, but complementary, aims.

For a useful study of genre terminology used in the titles of Tibetan texts, see Almogi 2005. I agree with her call to pay close attention to the various contexts in which descriptive genre terms can appear: title page, text body, colophon, printer’s colophon, marginalia, etc. It is not uncommon for a text to have multiple designations in various locations. One well-known example, perhaps relevant here, is the early-twelfth-century Lives of the Eighty-Four Siddhas (Grub thob rgya bcu rtsa bzhi’i lo rgyus, Caturśītisiddhapravṛtti), designated a rnam thar in the title page and a lo rgyus in the colophon.

See Decleer 1992, who argues that religious history (chos ’byung) is primarily “a concern for scholars” interested in the details of lineage transmission, translation, and so forth. Biography (rnam thar), on the other hand, “directly evokes, [and] by glimpses ‘shows us the Mystery’” (23). The latter seems particularly apt in describing the standard version of Mi la ras pa’s life.
The work of later Tibetan authors bears this relationship out. In some situations, scholars drew upon the *Illuminating Lamp* as a principal source for their record of Mi la ras pa’s life. This was the case for later historians, who clearly viewed Zhi byed ri pa’s extensive research (the *rnam thar lo rgyus*) as a superior source as they incorporated details from the *Illuminating Lamp* into their accounts. Yet as a proper liberation tale—that is, a model of the religious life and a blueprint for progress on the path toward Buddhahood—the Tibetan world has ubiquitously turned instead to Gtsang smyon Heruka’s standard version. For a general audience, readers valued the dramatic power of a simpler cohesive story (the *rnam thar*), which rejected and perhaps even contradicted many of Zhi byed ri pa’s claims.

We might reasonably wonder how Tibetan authors, and their readers, reconciled the contradictions apparent in these two approaches to Mi la ras pa’s life. The solution lay in a form of liberal hermeneutics that recognizes and accepts the diversity of written lives. In describing the biographical tradition of Padmasambhava, for example, Padma dkar po suggests that all versions of the life story—descriptions both of the master’s birth from a human mother and of his miraculous emergence from the center of a lotus—should be understood as being equally valid and true. In a remark that seems to anticipate Padma dkar po’s sentiments several centuries later, Zhi byed ri pa describes his own sources in this way: “Throughout their writing a few things may seem in error and there may seem to be minor variations. However, we can not know for certain an accomplished master’s sphere of activity, so from here on [the story] should not be altered by intellectuals or its blessings will be corrupted.”

It is not implausible that Padma dkar po’s comments were in fact influenced by his reading of Zhi byed ri pa’s work. Zhi byed ri pa thus argues for as inclusive an editorial standard as possible, even as he positions his composition as the authentic record of Mi la ras pa’s life, incontrovertible by virtue of its definitive sources. Although Gtsang smyon Heruka’s *Life of Milarepa* largely eclipsed the *Illuminating Lamp*, later readers seem to have understood and accepted the blurred boundaries between the biographer’s and the historian’s project. As the meaning of genre terms may shift according to an author’s particular aims, our understanding of such terms should be informed by a close reading of them within their specific textual frames. It is hoped that a more nuanced understanding of how Tibetan authors located their work within a given literary context, and the terms they used to do so, will help bring such blurred boundaries into sharper focus.

---

50 Padma dkar po’s comments appear in the famous pilgrimage guide to the Kathmandu Valley by the fourth Khams sprul Bstan ’dzin chos kyi ngyi ma (1750-1780). See Macdonald 1975, 119 (29a of the Tibetan text). These two descriptions of Padmasambhava’s birth are further discussed in Blondeau 1980.

51 Zhi byed ri pa, NDO, 44. See Appendix 1.
Appendix 1: Colophon and End Matter

Translation

[On developing the intention to compose]  [41] I have seen in detail what are definitely the instructions taught by Lama Mi la ras pa himself and the extraordinary sayings including those of the great son Ras chung Rdo rje grags. In general I, Zhi byed ri khrod pa, in my wanderings around the snowy land of Tibet, have seen and heard the Buddha’s teachings to the extent they have been translated: sūtras, tantras, oral transmissions, and instructions. In particular, [these include instructions on] Pacification (zhi byed) to the extent that they exist in the world, the dharma cycles of the lord gurus of the ’Khon Sa skya pa in their entirety, and the instructions of the supreme individual Mar pa Lotsāwa in their entirety. It has been the fortunate karma of this Śākya bhikṣu Zhi byed ri khrod pa to make unprejudiced supplications to [the masters of] those oral transmissions and others. In particular, I hold the transmission of Lama Mi la ras pa’s teaching tradition exactly as it is. There is nothing more than what I myself [possess]. . . .

In general, I have seen and heard the Buddha’s teachings to the extent they have been translated in India, China, and Tibet—sūtras, tantras, oral transmissions, and instructions. At the center of my practice, I received in their entirety the Path and Fruition (lam ’bras) and Pacification (zhi byed), the ritual practices of Lord Kha rag sgom chung, and the instruction cycles of the supreme individual Lho brag pa. I have seen some 127 written versions of the Life and Songs (rnam mgur) of the powerful lord Mi la ras chen. With the hope that I would realize them, it has been the fortunate karma of the Śākya bhikṣu G.yung ston Zhi byed ri pa to renounce this life and to spend it wandering in mountain retreats. Therefore, my own attitude and that of individuals who aspire for this life are in fundamental discord. I intended to make this biography of the great Lama Rje btsun more extensive than it is, but for fear of excess verbiage, I have left it at just this.

Many years before my present age, the Dharma Lord Rin chen dpal ldan gave advice at Glang ’kor, and I repeatedly visited Mkhan chen Dbang phyug shes rab of La shing, emanation of Ārya Avalokiteśvara. I repeatedly requested teachings from Gzi brjid rgyal mtshan, versed in the meaning of the aural tantras and who has the distinction of being learned, disciplined, and noble. I repeatedly visited the lama, powerful lord of hermits, the great supreme being Maṇipa and received advice. Furthermore, I was urged by mountain hermits (ri pa) of the three regions. In particular,

---

52 This appears to be the Bka’ gdams pa master Kha rag sgom chung Dbang phyug blo gros (b. 11th century).
53 This is perhaps Dpal ldan rin chen (b. 14th century), a Sa skya master and guru of Mani pa Legs pa rgyal mtshan.
54 This likely refers to a disciple of Gzi brjid rgyal mtshan, noted in the TBRC database (P10547), which would identify him as a teacher within the Ras chung snyan brgyud tradition. It might also be Mkhan chen gtsang pa Dbang phyug shes rab who is listed as a disciple of Chag Lotsāwa Chos rje dpal in the TBRC database (PORK1575). He does not appear to be the individual noted in the Deb gter sngon po as the long-time abbot of Rte’u ra Monastery, or the abbot of Tshogs pa bya rdzong. See Roerich 1949, 1059, 1072.
the great Ti shri Rin chen grags pa and Go shri Cho lo official, the emanation body Lama Kun dga’ rgyal mtshan dpal bzang po said he renounced the world and wandered among great sacred sites and mountain retreats and then came down from Gangs Ti se to ’Brog La phyi; he also resided at Ri bo rtse Inga in China. Then at Dpal Ding ri Glang skor he took my hand in his and said, “From Gangs Ti se to Ri bo rtse Inga in China, there is no one with a greater knowledge of Lama Rje btsun Mi la ras chen’s life story and history than you. Therefore, you should set down an extensive biographical record (yig cha rnam thar) about him.” Thus he urged me with great insistence.

Then at a later time, bhikṣu Byang skyabs, on his way to make offerings at the dharmacakra of Swayambhū, presented me with a footprint of the authentic lama Dharma Lord Bsod nams rgyal mtshan dpal bzang po from Dbus, [42] and a letter from lama Kun rgyal ba himself. At that time, as well, he urged me with great insistence.

The powerful lord of hermits, Lama Byang sems Sangs rgyas dpal, resident at the seat of the Glorious Heruka’s Palace in Sman lung Chu dbar also put me in charge [of such a project]. The master Ta’i Si tu Byang rgyal further entreated me [to do so], three times presented letters together with sacred supports. Many encouraged me in addition, and eventually I wrote this biography recollecting the kindness of Lord Rje btsun Mi ras chen.

In general, I have seen some 127 different attempts at the biography of Mid la ras chen. In particular, I have made [my version] taking as a basis the accounts of (1) Lord Khyung tshang pa Jñānaguru; and (2) the Dharma Lord Zhang Lotsāwa Grub pa dpal bzang who is unmistaken in his knowledge of the five sciences. Throughout their writings a few things may seem in error and there may seem to be minor variations. However, we can not know for certain an accomplished master’s sphere of activity, so from here on [the story] should not be altered by intellectuals or its blessings will be corrupted. There is no doubt that poetry and prose compositions that are not the sayings of previous [masters] have corrupted blessings.

[On the text’s composition]

... This historical biography of the precious lama, the supreme individual, the Glorious Bzhad pa rdo rje called Mid la ras chen, powerful lord of yogins free from all opponents who is like the second buddha, is titled An Illuminating Lamp of Sun and Moon Beams. It has come about in a female water-ox year, 269 years after the Great Rje btsun’s passing into nirvāṇa. . . . The Śākya bhikṣu G.yung ston Zhi byed ri khrod pa has put this into words on the eighth day of the horse month of the female water-ox year (1373), in the Gra’i rtse mo ngang hermitage of Mang yul Skyid grong, abode of Ārya Avalokiteśvara Wati bzang po.

[Second colophon]

... First, 269 years after the Great Rje btsun died, I put into words both an extensive and abbreviated Sun and Moon Beams in the Rtse mo ngang pa hermitage of Mnga’ ris Mang yul Skyid grong. Then, 277 years after the Great Rje btsun died [i.e., eight years later], I [met] (1) Lama Ri khrod pa ,
the vajra holder Bsod nams rin chen who resided at Lama Mid la ras pa’s
seat at the great sacred site called Heruka’s Palace of Sman lung Chu dbar;
and (2) the kind lama, powerful lord of hermits endowed with supreme
realization, the authentic being known as Rin chen gzhon nu.\textsuperscript{55} They
carried out their intentions with utter purity, and in this way I was encouraged
by the hermits of the three sacred sites. In particular, I was rendered assistance
by Bsod nams mgon po, a dharma protecting minister for the one called Ta’i Si
tu Chos kyi rin chen, an official endowed with faith toward the noble
three jewels and a bhikṣu’s attitude of enlightenment. Maintaining a totally
pure mind stream focused on the happiness of beings, he encouraged me
with great earnestness. Then, based upon the completely pure [attitude of
enlightenment in its two modes of] aspiration and application, I expanded
upon my previous [composition] a little bit. . . .

To summarize all of this: Wherever Lama Mid la ras chen’s feet trod and
whatever he said during the course of his entire life, I G.yung ston Zhi byed
ri khrod pa have been able to put into words without leaving out so much as
a hair’s tip.

Appendix 4: Zhi byed ri pa’s Record of Mi la ras pa’s Early Life

Translation

One of the eighteen family lines (gdung rgyud) is Be ri. One sub-division of that is Khyung tsha, among which there are both Khyung tsha stod and smad. From among these [Mi la ras pa’s] paternal ancestry (phu bo’i rgyud) was the Khyuung tsha stod. To a nomad family in that line was born a small child56 [named] Mid la, afflicted by the ill omen of a cakra. [The parents] consulted a Bon po scholar and by giving him the name Mid la chu sel, the ill omen was averted, the small child’s body grew larger and he turned out well. He was then given the name Mid la Gyang blon rgyal po, so it is said. His son was Mid la G.yang blon rgyal po, and in turn his son was Mid la Bkra shis rgyal po. The latter went to La stod Byang and established a home at a distance from Bcung pa’i ‘og skyid pa phug.

To him was born a son, Rdo rje rgyal po, who had a naturally pleasant disposition and was well liked among his friends. He lost all of his wealth through gambling at dice. He then befriended a man from Mngar’ ris Gung

56 Bu chang, in this case, perhaps premature and hence “underdeveloped.”
thang Tsa pa nyang with whom he returned. In Mkhar Sgong thang in Tsa rong of Rgyal Inga yul [2] he was given a niece (dbon mo)⁵⁷ of Dge bshes Tsa pa Grags pa bsod nams [as a wife] who gave birth to five children: the oldest son was Mid la Rin rgyal, the younger son was Mid la Sher rgyal. The eldest daughter was Sgron skyid, then next was Sgron chung, and then Sgron ne.

Rin rgyal took a maternal cousin (sru chung) as his wife⁵⁸ and had some six sons and three daughters. [His family] had commissioned many religious objects, including golden statues, extensive, medium-length, and [abbreviated] scriptures, and the Ratnakāśita Sūtra. Many such items in their possession, the extensive, intermediate, and [abbreviated] scriptures foremost among them, were given to Rin rgyal.

When Sher rgyal turned seventeen, Dge bshes Tsa pa had a grand-niece (dbon mo)⁵⁹ named Nyang bza’ dkar legs and since she was a maternal cousin

---

⁵⁷ For a detailed examination of the kinship terms found in the translation, see the following essay “Marriage, Kinship, and Inheritance in Zhi byed ri pa’s Account of Milarepa’s Early Life.” See also the genealogy chart at the end of this appendix. In general, the term dbon can refer to either a nephew or grandson, and likewise dbon mo to niece or granddaughter. In very early Tibetan texts, it seems to have exclusively referred to a nephew or niece on the sister’s side, although that may have changed in latter periods when the term became somewhat more flexible and referred instead to paternal relatives more generally. See Uebach 1979.

⁵⁸ She is later referred to as Smon skyid.

⁵⁹ In this story, Dge bshes tsa pa Grags pa bsod nams appears as the benevolent relative identified later as a maternal uncle (zang po) who aids Mi la, his mother and sister, during their plight with Mi la’s paternal relatives. In Gtsang smyon Heruka’s account, this figure is identified as Mi la’s maternal uncle (i.e. his mother’s brother), although here he seems to be a grand-uncle. In addition, the Dge bshes is later described as Mi la ras pa’s earliest tutor, from whom he received instruction in both logic and Rnying ma doctrine. (In Gtsang smyon Heruka’s version, the early tutor is described as a Rnying ma master living in Mi thod gad kha of Rtsa.) Zhi byed ri pa records the precise lineages for those doctrinal transmissions as follows: (1) Ras chung pa made the request, “Please impart to me whichever lineages of madhyamaka and pramāṇa you possess.” The Rje btsun replied, “The chief teachings of the Buddha [passed through] the brothers Maitreya and Asanga, Nāgārjuna, father and son, Dignāga and Candrakīrti, Gunaprabha and and Śākyaprabha. From them and others, [they passed] to Jo bo chen po rje, the sole divinity Atisha, Nag tso pan chen, Dge bshes ’Bron. And from them to Byang sms la ba rgyal mtshan and Dge bshes tsa pa Grags pa bsod nams. The latter gave them to me and I will teach them to you. In the future, these will be our own streams of explanation and the lineage will remain unbroken. (Zhi byed ri pa, NDO, 34. yang ras chung pas dbu ma dang bshad ma’i rgyud pa yang lags | de yang yang bar zhu duas pas | rje btsun gyi zhal nas | sangs rgyas bsan gtsos byams pa | thogs med sku mched | klu grub yab sras | phyogs dangs chos gras | yon tan ’od dang shakya ’od la sog nas | jo bo chen po rje la gcig a ti sha dang nag tso pan chen dang | dge bshes ’bron dang | de nas byang sms la ba rgyal mtshan dge bshes tsa pa grags pa bsod nams | des nga la yang bar yin la ngas khyod la bshad pa las pas | spyur rang re bshed rgyan pa yin yang rgyud pa ma chad tsam gyi guang |.) (2) [Ras chung pa] asked, “Is there a difference between the Vajradākinī of the old-translation teachings and the Vajradākinī of the new [translation school]?” The Rje btsun replied, “There [are differences in terms of the] stages of the activities of Buddhas, and the levels of capability among individuals, but there is no difference as to their essential point. The gurus in the system of the new school Vajradākinī are those of the path of means.” [Ras chung pa] asked, “From where do the early translations stem?” [Mi la] replied, “I have explained that to you previously. Have you forgotten? [The lineage is as follows:] the dharmakāya Samantabhadra, the sambhogakāya Vajrasattva, the nirmanakāya Dge’ rab rdo rje, guru Mañjuśrīmitra, Ting ’dzin Smadra, Mchig gzins rgyan ma, Xyang brtse and Xyang bzhin. Dge’ rab chen po, Xyang brtse and Xyang bzhin. Chos rgyal Khri srong lde btsan, Rma Blo gros dbang phyug, Ye shes ’bar, Ldan ma Lhun grub rgyal, Seng ge dbang phyug, Zla ba rgyal mtshan, Nyi ma rgyal mtshan, Grub pa
(sru chung) she was betrothed to him. When he turned eighteen he had the means to welcome her and Mid la Rdo rje rgyal po brought the couple together. When [Sher rgyal] turned nineteen, and Dkar legs was twenty-one, he took her as a bride. All of his parents’ wealth, headed by the Ratnakūṭa Sūtra, was given to Sher rgyal.

Rin rgyal’s wife said, “We have many children but our material conditions have deteriorated. Because the two youngest sisters [Rin rgyal’s daughters] will require a dowry from us, it is inappropriate for Sher rgyal to get all of the parents’ remaining wealth.” She then became mean-spirited and combative toward Rin rgyal, but once [the possessions] were turned over, there was nothing they could do. So it is said.

Then on the fourteenth day of the tenth month of a tiger year, a son was born to Dkar legs, and Dge bshes Tsa pa grags bsod nams named him Mi Klu grub mgon. When the son was three years and seven days old, a daughter was born who they named Mgon po skyid, but since she looked like a simpleton when she grew up, she was called Pe ta. This is what the Lha bon pa uncle (zhang po) Dge bshes Tsa pa himself said. The son was enamored when he saw a singing bard. Feeling no great desire to be near his parents, he went off to play [by himself], and as he became a singer of songs he was known by the name Thos pa dga’ (Delightful to Hear). These two stories are clear in the great biography (rnam thar chen mo).

When the son was three years and four months old, the daughter was four months, and Dkar legs was twenty-four, Sher rgyal died at age twenty-one. She performed the rites of virtue in a fine manner but still had a great deal of their family wealth. Then, when Dkar legs legs turned twenty-seven, her male and female relatives gathered and discussed the situation. They said, now that she was free from her period of mourning as a widow, Dkar legs should live together with Rin rgyal’s son.

Dkar legs pledged, “Now that one such as Sher rgyal has died, for as long as I live, I will not stay with others who won’t take care of these two children.” And she had no interest in listening [to her relatives].

At this, Rin rgyal said, “If you won’t live with my son, I will take your possessions.” He then carried away all her possessions, beginning with the Ratnakūṭa Sūtra. All the relatives said that Rin rgyal was in the right and they turned belligerent toward Dkar legs. So it is said.

Dge bshes Tsa pa came to Dkar legs’s aid and consoled her, yet even banding together she found no recourse and became completely miserable.

---

60 Zhi byed ri pa is perhaps referring here to the text of Zhang Lotsāwa or Khyung tshang pa mentioned repeatedly elsewhere in the text.
The Rje btsun was five years old at the time, so it is said. Then Dkar legs’s father and mother both died and she became even more miserable than before.

Then the Rje btsun turned seven years old and was left with Dge bshes Tsa pa while the mother and daughter lived in their empty house with neither food nor clothing. Neighbors and countrymen said to Dkar legs, “You won’t stay with your brother-in-law’s son,” and became aggressive. She fell into deep despair. To Dge bshes Tsa pa as well the relatives said, “You shouldn’t allow Thos pa dga’ to stay [with you],” and said many disparaging things.

At that time the Rje btsun was very bright and so had an excellent facility for reading. The mother did spinning and weaving, and Pe ta went foraging for left-over torma offerings.

Rin rgyal, his wife, and children assailed the Rje btsun and Pe ta with rocks wherever they saw them. They dared not strike Dkar legs, but said many foul things to her. No longer able to bear it, the Dge bshes said, “Thos pa dga’, you are most pitiable. You should go now,” and sent him away. At that time, the Rje btsun was seventeen years old, so it is said.

The mother and two children were on the verge of starvation when a friendly former monk gave them ingredients for making chang, which they prepared. [The mother] gathered her relatives together, poured chang for the uncle [Rin rgyal], and said, “Now mother and children will take a share of the possessions.” [The uncle] replied, “I will give you a share,” but then his wife changed his mind, and he no longer wished to give it.

Thereafter, the Rje btsun sang songs, Pe ta foraged for ritual cake offerings and took up begging, and the mother spun and wove but they had neither food nor clothing and there was never enough for them to live on.

The Dge bshes and a friendly former nun (go mi ma) secretly gave them two measures of barley with which they prepared chang. [The mother offered it] to the uncle, and said, “Others may take hold of our wealth but we should have at least a milking cow to depend on. Why should a widow and her children, your relations, die of starvation?” He became drunk and said, “If you keep this up, perhaps I should kill you three, mother and children.” He threw a rock at Dkar legs, kicked the Rje btsun trying to kill him, Pe ta fled out the door and there was nothing to be done. When the uncle had gone, the mother and two children gathered, and as they wept they heard someone arrive at the doorstep. Thinking it was the uncle, the two children sat there crying and the mother took hold of a knife and a club and waited with them [hidden] in an auspicious scarf. It was not the uncle but rather the former monk who brought them something to eat, and they were thus consoled. So it is said. In later times, [3] the great Rje btsun repeatedly said, “In that friendly former monk I had a helpful guide for escaping well the six realms.” He said, “At that time we were all very [frightened] and all of my

---

61 Sngar gi go mi. Go mi is generally defined as btsun pa, literally “venerable” or “ordained monk.” But perhaps sngar gi go mi more generally refers to an old friend, which seems to be the meaning here.

62 This passage is unclear, although the general meaning seems correct. . . . khu bo la khong mi gezhan gyis ni’ nyen sru btsong sru nga len byed cing yang’ dug pa nga rang dag mo nor la rten yang chog ste1.

63 Bbras kha > bkra shis kha btags?
paternal aunts turned evil.” He said, “Wherever we went, we were anxious
about meeting with our paternal uncle’s family.” So it is said.

Then, one day while the mother was collecting firewood on a mountain
across the valley, a family carried offerings for a thread-cross ritual and Pe ta
went to take the ritual cakes. As she reached for the cakes, a dog grabbed her
hand in its mouth. She kicked the dog’s head and it released her hand but
then lunged for her abdomen and bit her in the crotch. She cried out in great
agony and the mother came running down the mountainside. She [slipped]
and tumbled down part of the mountain [shaped like] a frog’s open mouth.
Her face was covered with blood, her teeth broken, and her body roughed
up. When she reached her daughter they continued on together. The Rje
btsun went up into the upper Rtsa valley64 where he ran into his uncle’s
relatives. They beat him, kicked him, and cracked open his skull, which bled
profusely. The mother and two children met on the path, covered in blood,
yet even under these circumstances Thos pa dga’ sang forth a song.

The mother said, “Ay, have you’ve lost your mind? There are none in the
world more miserable than us three, mother and children. Your uncle is
trying to kill us and we have found ourselves in this situation, and yet you
sing songs.” She went on thinking about their situation and then broke
down in tears so the Rje btsun sat there for a while in silence.

“Well then, what should your mother do?” [she asked.]

[The Rje btsun replied,] “You, mother, could live with Uncle’s son, and
you could obtain a share of his possessions. Then we, mother and children,
would have the strength to escape on our own. Wouldn’t it be better if you
did that?”

At this, the mother threw a handful of dirt in her son’s face, beat her chest
with her fists, and broke down in tears. She said, “A son such as you born to
your father Sher rgyal! If I lived with Rin rgyal’s son, when the time came
for me to take a share of his possessions I would be pregnant again and you
two, brother and sister, would starve to death, wouldn’t you?”

As she was crying, Dge bshes Tsa pa, a male companion who said he had
previously taken Sher rgyal’s oath [to look after his family], and a friendly
former nun arrived. They wiped the blood off of mother and children,
recited mantras over their wounds, and offered something to eat. While they
were consoling the family, the uncle’s family appeared, each carrying a club,
and beat the male companion and the female friend. To Dge bshes Tsa pa
the uncle said, “How terrible that you have treated me with scorn. Death
comes to everyone [including Sher rgyal] but Dkar legs has brought me
great humiliation. She remains a widow who is young and eligible for
marriage, but she doesn’t listen [when I tell her] to live with my son.” His
temper rose and [the male companion and female friend] both fled.

Furious, the Dge bshes said to Rin rgyal, “You are filled with pride. I’ll
steal your wealth and entrust it to the Jo bo. Why did you all forsake your
agreement? Upon whom will the karma of someone like Dkar legs fall? It is
not acceptable to take away her wealth when her children are starving; you
are too proud. She will not burden her children with misery, and neither
will she go to another man.” With this, Dge bshes pa became enraged. He

64 This is an approximate translation: *rje btsun rtsa phu na yar skjur srun la* song ba...
said, “The local people are speaking sharply and the Mi la family has split apart, so I am unable to say anything.”

Regarding this, in later times Mi la said, “My uncle (zhang po) was very kind.” So it is said.

Marriage, Kinship, and Inheritance in Zhi byed ri pa’s Account of Mi la ras pa’s Early Life

Geoff Childs (Washington University in St. Louis) and Andrew Quintman (Yale University)

The preceding article presents Zhi byed ri pa’s fourteenth-century account of Mi la ras pa’s life. The purpose of this follow-up article is to analyze marital and inheritance practices related to Mi la’s childhood as described in that text.

Marriage and Kinship

Mi la’s grandfather, Rdo rje rgyal po, married a woman classified as Dge shes Tsa pa’s dbon mo and had two sons: Rin rgyal and Sher rgyal. The text states that Rin rgyal and Sher rgyal both married women classified as sru chung. Sher rgyal’s spouse, Dkar legs, was also classified as Dge shes Tsa pa’s dbon mo.

In the Old Tibetan Annals dbon refers to grandchild, and in the compound form sras dbon connotes male descendants, which can include direct (son, grandson) and collateral (brother’s son, brother’s grandson) descendants (Uebach 1980). The term dbon later assumed the dual meanings of grandchild and nephew, and nowadays is used as an honorific for tsha (grandchild or niece/nephew). In the case of Zhi byed ri pa’s text, we can interpret dbon mo (mo is a feminine suffix) to mean that Rdo rje rgyal po married Dge shes Tsa pa’s niece. Sher rgyal, Rdo rje rgyal po’s son, most likely married Dge shes Tsa pa’s grand niece.

Sru mo commonly means maternal aunt (mother’s sister), which opens two possible interpretations for sru chung. The first is “mother’s younger sister”, but it is unlikely that a man would marry such a relative. Although incest prohibitions vary from one place to another, no known Tibetan society condones marriage to one’s mother’s sister.

The second and more likely interpretation is “cousin”. Several Tibetan dialects contain a variant of sru mo in their kinship terminology, specifically, ushu in Khumbo (Schicklgruber 1993:343), uru in Sherpa (Fürer-Haimendorf 1964:76), and sru ma in Nyinba (Levine 1988:50). In addition to mother’s sister, these terms refer to mother’s brother’s daughter. It therefore makes sense that sru chung (little/young sru mo) is used in Zhi byed ri pa’s account to mean cousin, or more specifically, mother’s brother’s daughter. If this interpretation is correct, then Rin rgyal and Sher rgyal married first cousins—a liaison that would be considered incestuous in some, but not all, Tibetan societies.

* The authors would like to thank Tsetan Chonjore for insightful discussions about potential interpretations of Tibetan kinship terms.

Tibetans generally prohibit marriage with a member of the same patrilineage (rus, or rgyud) unless a stipulated number of generations have passed since sharing a common ancestor. This guideline manifests in the distinction Tibetans make between kin who are classified as spun and gnyen (Levine 1988:50): the former connotes siblings and parallel-cousins (children of one’s mother’s sister or father’s brother), the latter cross-cousins (children of one’s mother’s brother or father’s sister). Marriage with spun is an unambiguous act of incest because that person is likely to share the same rus, or bone, which is understood by Tibetans to be the bodily substance a father contributes to his child through procreation. Marriage with gnyen, however, does not necessarily violate incest prohibitions because that person is unlikely to be “rus gcig pa,” or “of the same bone.” To illustrate, think of your own family as Tibetan. Your mother and her brother (your maternal uncle) are rus gcig pa through the principle of patrilineal descent. Because your mother was prohibited from marrying someone of the same rus, your father and mother’s brother belong to different patrilineal descent groups and, by extension, you and your mother’s brother’s children (cross-cousins) also belong to different groups. Marriage with a cross-cousin does not violate the incest prohibition because a cross-cousin cannot be rus gcig pa.

Nevertheless, many Tibetans consider marriage with any first cousin (parallel or cross) to be incestuous (Stein 1972:95) on the principle that there needs to be several generations of separation on the matrilineal side as well. However, Benedict (1942) and Allen (1976) use linguistic analysis to argue that cross-cousin marriage was normative in Tibet’s distant past (cf. Nagano 1994). Furthermore, anthropologists working throughout the Himalayan region have found cross-cousin marriage to be a common practice (Goldstein 1975; Hall 1978; Schuler 1987; Levine 1988; Mumford 1989; Schicklgruber 1993; Childs 2004). Specifically, Schuler (1987:130-131) reports that one-third of marriages among Chumik’s commoner class are between cross-cousins, and Levine (1989:50) finds that Nyinba households prefer to repeat marriages with matrilineal cross-cousins over the course of generations. Schicklgruber (1993) argues that incentives for cross-cousin marriage include the ability to balance marital debts over time because a bride-receiving household is indebted to a bride-giving household, and a desire to ensure a daughter is well treated by sending her to a household consisting of close kin.

Based on the evidence presented above, we conclude that Rin rgyal and Sher rgyal each married cross-cousins, and that such relationships did not constitute incest in that particular Tibetan community at that time. In fact, the instrumental particle pas used in the text for this passage may demonstrate reason or cause. That is, the phrase “since she was a maternal cross-cousin she was betrothed to him” (sru chung yin pas gnyen byas nas) strongly implies that cross-cousins were not merely acceptable as spouses but sought after. Because only Sher rgyal’s spouse is identified as Dge shes Tsa pa’s dbon mo (grand-niece, as argued above), we can further deduce that the two women were not sisters.
Inheritance

Tibetan inheritance systems vary by place and time. For example, under the Dga’ ldan pho brang government that administered Central Tibet from the mid seventeenth century to the 1950s, taxpayers (khral pa) held heritable rights to set amounts of land providing they met contractual tax obligations (Goldstein 1971). Technically, inheritance was on a per capita basis: each son had a right to an equal share. In reality, people took efforts to prevent dividing their property. For example, they engaged in polyandrous marriages to concentrate male labor within the household and pass assets intact from one generation to the next. Furthermore, the parents or eldest brother could refuse to bestow anything to a junior brother who wished to marry monogamously and establish a separate household (Goldstein 1978). Parents could also eliminate sons from the inheritance equation by sending one to a monastery, or to another household as a mag pa (matrilocally-resident husband) or bu tshab (adoptive son).

In contrast, many communities in the highlands of Nepal practice a system of partible inheritance. For example, in Nubri the eldest brother marries and brings his wife to his parents’ home. After their first child is born the son claims his share of fields and livestock and moves into a separate house. When the youngest brother marries he brings his bride home and his parents bequeath their remaining assets to him. The parents can either remain with their youngest son who is expected to provide old age care, or move to a retirement home (Childs 2004, see also Schuler 1987 and Goldstein 1975).

Evidence from Zhi byed ri pa’s account suggests that people in Mi la ras pa’s village followed a system of partible inheritance. At the time of Rin rgyal’s marriage the text states,

[His family] had commissioned many religious objects, including golden statues, extensive, medium-length, and [abbreviated] scriptures, and the Ratnakāṭa Sūtra. Many such items in their possession, the extensive, intermediate, and [abbreviated] scriptures foremost among them, were given to Rin rgyal.

The text only specifies religious accoutrements and texts Rin rgyal inherited but does not mention the most fundamental assets for a rural Tibetan family—land and animals. Perhaps in the context of a rnam thar the author felt it would be trivial to mention mundane possessions. Regardless, the ensuing disputes constitute solid evidence that, upon marriage, Rin rgyal received part of his father’s estate and moved out from his natal household to establish a separate residence.

Regarding Sher rgyal’s marriage, the text states,

When Sher rgyal turned seventeen, Dge bshes Tsa pa had a grand-niece (dbon mo) named Nyang bza’ dkar legs and since she was a maternal cousin (sru chung) she was betrothed (gnyen byas) to him. When he turned eighteen he had the means to welcome her and Mid la Rdo rje rgyal po brought the couple together (khag shibs). When
[Sher rgyal] turned nineteen, and Dkar legs was twenty-one, he took her as a bride (bag mar blangs).

First, the passage implies that a Tibetan marriage during Mi la ras pa’s time could involve a sequence of events over time, as is common today. In this case it started with a betrothial (gnyen byas, perhaps similar to slong chang or engagement ceremony), followed by bringing the couple together or allowing them to become acquainted (khag shibs), and culminated in a formal ceremony whereby the groom brings his bride back to his home (bag mar blangs).

Furthermore, the phrase “means to welcome her” (bsu tshis yin pa) can be interpreted as “economic means to get married,” that is, Rdo rje rgyal po agreed to provide Sher rgyal the requisite inheritance to start his own family. Because Rdo rje rgyal po and his wife made the arrangements, we can infer that Dkar legs (Mi la’s mother) moved into a household consisting of her husband, father-in-law, and mother-in-law.

Regarding Sher rgyal’s inheritance, the text states, “All of his parents’ wealth, headed by the Ratnakūṭa Sūtra, was given to Sher rgyal.” In this case “all of his parent’s wealth” refers to all that was left after Rin rgyal had claimed his inheritance. This interpretation is confirmed in the subsequent passage when Rin rgyal’s wife refers to Sher rgyal’s inheritance as the parents’ “remaining wealth” (shul gyi nor).

In summary, both sons received parts of their father’s estate. Rin rgyal, the elder, established a separate residence upon marriage whereas Sher rgyal, the younger, continued to co-reside with his parents after marriage presumably as a means to support the elders. Tensions emerged when Rin rgyal’s wife declared,

> We have many children and our material conditions have deteriorated. Because the two youngest daughters will require a dowry from us, it is inappropriate for Sher rgyal to get all of the parents’ remaining wealth.

Rin rgyal’s wife’s argument, that their economic condition was deteriorating because they had many children, was spurious. The only two people who mattered in the inheritance equation were Rin rgyal and Sher rgyal. Both were entitled to equal shares. Rin rgyal obviously had more children when Sher rgyal married because he was older and had a considerable head start on reproduction. Rin rgyal’s wife made an unreasonable demand, an interpretation supported by the text which states she became mean-spirited and combative toward her husband albeit there was nothing they could do about it.

Rin rgyal and Sher rgyal should have been able to supervise independent households. However, Sher rgyal died when Mi la was a toddler, thereby setting in motion the next phase of the drama. Mi la, Sher rgyal’s only legitimate son, was the rightful heir to his father’s property. However, he was too young to work, let alone manage the agricultural land and domestic animals of his father’s estate. Dkar legs, a young widow with two small children, was in no position to undertake the myriad chores required to run a rural household.
One option to resolve the dilemma would be for Dkar legs to marry Rin rgyal. Technically this would be possible because Tibetans practice levirate marriage, the custom whereby a man marries his deceased brother’s widow (see Stein 1972:98, 102-103; Hall 1978:57; Schuler 1987:76; Childs 2004:135–139). Polygyny is also acceptable in many Tibetan societies, and presumably Rin rgyal’s wife would have to approve of such an arrangement. But economically this would not be an ideal option. Although Rin rgyal would add assets to his own estate, he would also add more inheritors: Mi la and any subsequent sons born to Dkar legs. His wife was already complaining about the economic hardships incurred by having many children, so it is unlikely she would agree to add more to the equation.

Rin rgyal instead proposed that Dkar legs marry his son. Rin rgyal was older than Sher rgyal, so it is plausible that one of his sons was roughly the same age as Dkar legs or perhaps younger. Tibetans see no problem for a younger man to marry an older woman. Sher rgyal, for example, was three years younger than Dkar legs. From Rin rgyal’s perspective, a marriage between Dkar legs and his son would make sense. With six sons, Rin rgyal had a motive to minimize the division of his assets. What he proposed was a variation of the mag pa (matrilocally-resident husband) option that would allow him to remove one son from his inheritance equation. That son would move in with Dkar legs; any male offspring resulting from the union would become eligible to inherit Sher rgyal’s estate along with their half brother Mi la.

Based on the reactions of family and community members, the option described above seems to have been appropriate. However, Dkar legs declined the marriage proposal and from the ensuing dialogue we can infer that she was concerned for the welfare of her children. On the one hand, she feared they would be ill treated by their uncle and stepfather, while on the other hand she did not want to dilute Mi la’s future inheritance by bearing more children. Dkar legs’ refusal prompted Rin rgyal to take action.

At this, Rin rgyal said, “If you won’t live with my son, I will take your possessions.” He then carried away all her possessions, beginning with the Ratnakīṭṭha Sūtra. All the relatives said that Rin rgyal was in the right and they turned belligerent toward Dkar legs.

Apparently, Rin rgyal was entitled to assume control over his deceased brother’s possessions—at least in the capacity as caretaker until the legitimate heir, Mi la, came of age. That Mi la was considered the rightful heir is supported in subsequent sections. When Mi la was 17 years old, an appropriate age for initiating a marriage proposal, Dkar legs tried to reclaim her son’s property.

The mother and two children were on the verge of starvation when a friendly former monk gave them ingredients for making chang, which they prepared. [The mother] gathered her relatives together, poured [chang] for the uncle [Rin rgyal], and said, “Now mother and children will take a share of the possessions.” [The uncle Rin rgyal] replied, “I will give you a share,” but then his wife changed his mind, and he no longer wished to give it.
Rin rgyal’s initial consent supports the viewpoint that he was acting as caretaker of his nephew’s property until Mi la reached a suitable age for marriage. Unfortunately, Rin rgyal’s wife intervened to scuttle the agreement. Rin rgyal not only refused a subsequent request, but flew into a drunken rage beating and abusing his destitute and powerless kin. Dispossessed of his rightful inheritance, Mi la and family were destined for a life of poverty. Perhaps one can now better understand why he and his mother developed such a keen desire to avenge the loss.

Concluding Remarks

Our purpose in writing this essay is to exemplify how analysis of social and cultural norms can lead to a greater appreciation for conflicts presented in Tibetan historical narratives. Zhi byed ri pa no doubt had an intuitive understanding about the issues he documented, and felt little need to explain the significance of kinship relationships and norms of inheritance. His contemporaries would easily grasp the relationships and obligations created and maintained through marriage, and would be aghast at the breach of protocol when Mi la was dispossessed of his rightful inheritance. But for a foreign readership, and even for a Tibetan raised in an ever-changing cultural environment, the full significance of events is not always obvious. Moreover, Zhi byed ri pa’s text provides an early and exceptionally detailed description of village life on Tibet’s southern border with Nepal. For the modern reader, it offers a rare window into the complex events that shaped the childhood of Tibet’s great religious figure as well as the famed story of his life. We therefore hope that the above analysis provides a greater appreciation for the tribulations faced by Mi la ras pa in his youth, and the social complexities of Tibetan village society.

Abstract
Debate narratives found in biographical and historical materials constitute a promising source for the study of the actual practice of debate both in the Indian and Tibetan traditions. This paper investigates the account of a debate opposing the renown Tibetan Buddhist master Sa skya Pandita Kun dga’ rgyal mtshan (1182–1251) to a group of Indian non-Buddhist teachers based on the biography composed by one of Sa skya Pandita’s disciples, lHo pa kun mkhyen. The argumentative statements attributed to Sa skya Pandita are analyzed from a rhetorical and a logical point of view — the paper traces a plausible source for the core argument in the Madhyamakahrdayakārikā and Tarkajvalā — and evaluated in view of Sa skya Pandita’s theory of argumentation. In the conclusion, we discuss the likelihood that lHo pa’s narrative relates a historical event, and to what extent his account can be deemed representative of face-to-face debate in thirteenth-century Tibet.

1. Introduction

Debate is a conspicuous aspect of Tibetan Buddhist scholarly practices and handclapping undoubtedly belongs, in Western perception, to the trademarks of Tibetan monasticism. While the religious and institutional background, as well as the form and the function of modern Tibetan debate have been the object of several studies, the origin and development of such a practice, whether used in actual philosophical confrontation or for didactic purposes, remains to be clarified.

Debate has played an important role in Tibetan Buddhism since the early days of the Earlier Diffusion (snga dar). Indian visiting scholars certainly were influential in this regard. It is revealing for instance that Sāntarakṣita,

* Work on this paper has been generously supported by the Austrian Science Fund (FWF) in the context of the FWF-Project P19862 “Philosophische und religiöse Literatur des Buddhismus.” I am grateful to a number of colleagues who have contributed to this paper by providing useful comments and help in identifying and accessing the necessary source materials. I wish to thank in particular Jonardon Ganeri, Takashi Iwata, Helmut Krasser, Tomohiro Manabe, Shoko Mekata, Alexander Schiller, Marc Tiefenauer, and Toshikazu Watanabe. I am grateful to David Higgins for helping to improve my English.

who visited Tibet twice under the reign of King Khri srong lde btsan, is depicted in the dBa’ bzhed as incarnating the “logical force” in the establishment of Buddhism, working in pair with Padmasambhava’s “magical” one.² As for his student Kamalaśīla, his involvement in the Great Debate of bSam yas speaks for itself. In addition to the direct influence exerted by such living examples of Indian scholarship, Tibetan scholars became acquainted with the rules of debate propounded by Indian Buddhist thinkers as Dharmakīrti’s Vādanyāya and its commentary by Śāntarakṣita were translated into Tibetan.³ As Tibetan epistemological scholarship significantly developed in the early centuries of the Later Diffusion (phyi dar), notably around the monastery of gSang phu Ne’u thog, Tibetan scholars were elaborating theories of argumentation, in particular in connection with Dharmakīrti’s discussion of “inference-for-others” (parārthānumāna, gzhan don rjes dpog) in his Pramāṇaviniścaya. They appear to have also been active in its applied aspect, debate. One learns for instance from Sākya mchog ldan that Phya pa Chos kyi seng ge (1109–1169), whose name is closely associated in the Tibetan tradition with the development of an indigenous epistemological system and the elaboration of new methods of argumentation, entered a debate on Madhyamaka interpretation with the visiting Kāśmīrī scholar Jayānanda, with the translator Khu mdo sde ‘bar acting as an intermediate between the two.⁴ The Blue Annals mention scholars going on “debating tours” (rtos pa’i grwa skor).⁵ Also, the practice of using debate for pedagogical purpose, as a tool for studying, had developed by the thirteenth century.⁶

The epistemological treatises by gSang phu authors that have become available to us in recent years include, as mentioned, considerable discussion on argumentation. They do not, however, shed much light on the

² In the dBa’ bzhed, Śāntarakṣita addresses King Khri srong lde btsan in the following terms at the time of his second visit: “We will compete against all the Tibetan non-Buddhists (mu stegs); in logic (gtan tshigs) they will have to vie with me, in magic they will have to vie with the mantras from U rgyan, Padmasambhava” (folio 12a3–4: bd byi nu stegs kun dang gtan tshigs ni bdag dang ‘dran la; rdzu ’phrub ni u rgyan <ggyi> snags mkhan pad ma sam bha ba dang ’dran te ... Transl. mine; for Wangdu and Diemberger’s translation see dBa’ bzhed p. 55).

³ The Vādanyāya is already included among the “translations in progress” in the IHan catalogue. It was translated and revised around the middle of the eleventh century, while Śāntarakṣita’s commentary was translated around 1100. Sa skya Paṇḍita and Rigs pa’i ral gri mention a second commentary, by Saṅkaranāndana, which would have entered Tibet thanks to Dānāśāla (see Hugon forthcoming). On the influence of the Vādanyāya on Tibetan argumentation theories in the early centuries of the Later Diffusion, see ibid. Previous works on vāda, by Vasubandhu and Dignāga, were not translated into Tibetan.

⁴ See dBu ma’i byung tshul 13b5–6: phya pa dbu ma rang rgyud la bshad nyan byed pa’i dus su / zla ba’i zhab s kyi bryug ‘dzin pa’i tu dza ya a nanta zhes pa zhi g bod du byon / dbu ma la ’jug pa’i ’grel bshad mzas / de’i dus su phya pa rag dons skos d srtsad cing... (cf. Seyfort Ruegg 2000: 37 n. 68) and dBu ma rgya mtsho, le’u gyis pa, pha 53b2–4: thog mar slob dpun phya pa’i drung du rang rgyud kyi tshul la legs par shyangs pa dag go jas de’i tsh ‘kha ch’i pa’i tshul la dza ya a nanda / bod du byon nas... zla ba’i gzhung lugs gwa’i bar mdzad pa yin la / de’i tsh ‘kha slob dpun phya pa dang / kha che a nanda gyis khu lo tshus ba bar du bryug pa’i rtos pa bvas pas phya pa rgyal lo zhes bya ba’i glan du bya ba dag kyung snang... (cf. van der Kuijp 1993b: 193). Sākya mchog ldan provides in the following folios a summarized account of Phya pa’i arguments involving nine points (three threefold arguments).

⁶ It is criticized by Sa skya Paṇḍita (1182–1251); see notably mKhas ’jug ad III.15 and ad III.34.
question of actual debating practices in this early period. Indeed, the models of argumentation presented in these works are prescriptive rather than descriptive and their authors adopt a perspective on debate that concentrates on argumentative statements rather than on debate as a global event. One can, at most, reconstruct for some of them the sequence that these statements are supposed to follow.

It is thus necessary to turn to different sources in order to satisfy our curiosity regarding the more practical aspects involved in face-to-face debates in the early centuries of the Later Diffusion. In this regard, I was greatly inspired by two recent studies addressing this question with regard to India. The first, by Johannes Bronkhorst (Bronkhorst 2007), examines the modes of debate in classical and medieval India by considering a twelfth-century inscription, found near Sravana Belgola, that makes references to situations of debate involving patriarchs of the Digambara branch of Jainism. The second is an essay by José Cabezón (Cabezón 2008) based on Tibetan and Chinese debate narratives involving great Indian Buddhist thinkers. These two studies demonstrate how factual information about actual debating practices can be collected from these sources, but also, especially for the material studied by Cabezón, the heavy symbolism and conventions that lay behind narrative structures. As Cabezón points out, the account of arguments in historical and hagiographical literature, in epics and in drama, have received little scholarly attention, but are likely to constitute, when considered with due care, a promising source of information for us to gain some sense of the circumstances and processes of actual debates.

Following these scholars’ lead, I examine in the present paper the narrative of a debate involving a Tibetan master, who is no other than the famous Sa skyi Pandita Kun dga’ rgyal mtshan (1182–1251), alias Sa paṅ. The debate between Sa skyi Pandita and non-Buddhist masters that allegedly took place in sKyid grong constitutes an especially interesting case of study. First, it is a very rare instance of a debate opposing a Tibetan thinker to a non-Buddhist scholar at the time of the Later Diffusion — actually the only one I could find so far. Even though non-Buddhist thinkers remained opponents of choice in Tibetan literature, by the time of the Later Diffusion, there must have been few occasions for Tibetan Buddhists to debate with Indian non-Buddhists, and virtually none in Tibet proper. Secondly, Sa paṅ ascribes to debating an important place in Buddhist scholarship and identifies it, along with composition (rtsom) and exposition (chad), as an essential competence that scholars should master. The third section of his mKhas ’jug, where he deals with this ideal program, is accordingly devoted to the question of correct debating, and includes elaborate discussions concerning the proper way to debate with Buddhist as well as non-Buddhist opponents. We thus have here an ideal opportunity to

---

7 On the argumentation theories of these early logicians see Hugon forthcoming.
8 According to Glo bo mkhan chen, this is a unique case (mKhas ’jug rnam bshad 24a4–5: nges na bod kyi pañi tas phyi rol mu stegs byed kyi rgol ba bzlog pa ni / chos rje ’di kho nar zad do //). The Deb sugon (285–286) relates a debate between Buddhists and Indian non-Buddhists when listing the “four wonderful spectacles” related in the life story of Lha rje zla ba’i od zer (1123–1182). But it is not Lha rje, but his teacher Jayasena who gets involved in this debate opposing, in Nepal, for the New Year festival, 2000 jaṭila (rał pa can) and 2000 Buddhist panditas and yogins. Chogyay Trichen Rinpoche’s modern biographical account (Chogyay 1983: 18) claims that “Sakya Pandita was the first Tibetan to defeat Indian scholars in debate.”
examine a theoretician in action by assessing the kind of argumentative strategy that is attributed to him by the authors of the various sources that mention the event. By the concluding section, we will discuss the plausibility of the encounter itself and evaluate to what extent the narrative considered gives us an accurate picture of an actual debate or of a debate as it could have taken place in these days.

2. The sKyid grong debate – sources and scenarios

2.1 Sources

Sa pa’s debate against a group of Indian non-Buddhist opponents is quite famous and provides a popular motif in pictorial representations of Sa pa.9 Accounts of the debate — varying from a few sentences to several folios — occur in various types of sources that deal with Sa skya Paññita’s life: rnam thar by his students (contemporaneous and posthumous), biographies by authors of later generations, genealogical and religious histories, political and general histories, as well as biographical sketches found in commentaries on his works.10 The earliest extant material includes biographies by lHo pa kun mkhyen Rin chen dpal and Zhang rgyal ba dpal, that cover Sa pa’s life up to his departure to Ködan’s court, and a posthumous account authored, according to its colophon, by Yar klungs pa Grags pa rgyal mtshan.11 Unfortunately, a number of other early biographies by Sa pa’s

---

9 For an example, see http://www.himalayanart.org/image.cfm/356.html.
10 The main accessible accounts of Sa pa’s life have been listed by Jackson (1987: 23). For a list of the sources used in this paper, see the references preceded by a star in the bibliography.
11 Mekata (2009) contests this attribution and suggests that the Yar klungs rnam thar ‘bring was instead composed by Yar klungs pa Byang chub rgyal mtshan. Her conclusion is based on the study of an anonymous biography (terminus ad quem fourteenth century) that cites repeatedly from two works identified respectively as the “rNam thar rgyas pa” and the “rNam thar bsdus pa” in the text. Mekata shows in her paper that the quotations from the first are literally identical to the text of the Yar klungs rnam thar ‘bring published in the Lam ‘bras slob sbyad, and suggests that the rNam thar rgyas pa (or rNam thar tshigs bcad ma rgyas pa as it is called in the colophon) is none other than the Yar klungs rnam thar ‘bring. The colophon of the manuscript studied by Mekata attributes the rNam thar tshigs bcad ma rgyas pa to Yar lung pa Byang chub rgyal mtshan. Mekata shows that the second text cited in this anonymous biography, identified as the “rNam thar bsdus pa,” is the Chos kyi rje sa skya paññita chen po rnam par thar pa mdor bsdus pa, or Chos rgyal ma. The colophon of the manuscript states that the biography is “extensive compared to the rNam thar tshigs bcad ma composed Yar lung pa Grags pa.” Mekata identifies this “rNam thar tshigs bcad ma” with the short title “rNam thar bsdus pa” used in the text, and on this basis ascribes to Yar klungs pa Grags pa rgyal mtshan the authorship of the Chos rgyal ma. Mang thos and gSang rgyas phun tshogs Ngor chen attribute a “rNam thar tshigs bcad ma rgyas pa” to Byang chub rgyal mtshan. Mekata shows that the text cited in the anonymous biography, identified as the “rNam thar bsdus pa,” is the Chos kyi rje sa skya paññita chen po rnam par thar pa mdor bsdus pa, or Chos rgyal ma. The colophon of the manuscript states that the biography is “extensive compared to the rNam thar tshigs bcad ma composed Yar lung pa Grags pa.” Mekata identifies this “rNam thar tshigs bcad ma” with the short title “rNam thar bsdus pa” used in the text, and on this basis ascribes to Yar klungs pa Grags pa rgyal mtshan the authorship of the Chos rgyal ma. Mang thos and gSang rgyas phun tshogs Ngor chen attribute a “rNam thar tshigs bcad ma rgyas pa” to Byang chub rgyal mtshan and a “rNam thar bsdus pa” to Grags pa rgyal mtshan, but some evidence would be needed in addition to the similarity of terminology to establish conclusively that, by these descriptions, they mean, respectively, the Yar klungs rnam thar ‘bring and the Chos rgyal ma. Zhu chen attributes the “Chos rgyal ma chung” to Yar klungs pa Byang chub rgyal mtshan. On the attributions to the two Yar klungs pa, see also Jackson 1987: 33, n. 5 and 6. As Mrs Mekata kindly informed me, there is no mention of the debate in the anonymous biography she studied. The Chos rgyal ma praises Sa pa for his capacities as a logician but without a specific mention of the debate in sKyid grong (Chos rgyal ma 71,7–10: rtog ge ngan pa’i rgel ba thams cad bzog // rloms pas khangs pa’i rtog ge zil gyis gnon // mkhas pa’i grags pa sa steng thams cad khyab // ’jigs bral khyod la spyl bos phyag
Clapping hands in sKyid grong?

students are lost, such as a biography by ‘U yug pa Rigs pa’i seng ge, as well as biographies by Bi ji Rin chen grags, Dam pa Kun dga’ grags and Barston rDo rje rgyal mtshan that were known to the author of the gSung sgros ma, a biography of Sa pan included in the collected works of Ngor chen Kun dga’ bzang po (1382–1456). Apart from works that include an account of Sa pan’s life, references to this debate are also found in texts related to the region the debate took place, namely sKyid grong.

There is, in addition, a versified composition found among Sa pan’s works that bears the title “Verses of the subduing of the six non-Buddhist teachers” (Mu stegs kyi ston pa drug btul ba’i tshigs bcad). These verses themselves occur in several biographies (see below 3.V). Most of the sources that only mention the event in a very brief way actually do not give more information than what is found in the colophon of this work.

‘tshal lo’i). ‘Phags pa’s biography of Sa pan does not mention the debate either. Another early account by dMar ston Chos kyi rgyal po (ca. 1198–1259), also a student of Sa pan, is found along that of other Lam ’bras masters in his Zhib mo rdo rje. dMar ston’s account covers Sa pan’s life from his birth up to his studies with Spyi bo Ihas pa following his ordination. It ends on the mention of Sa pan’s mastering of the five sciences and of the three scholarly competences of the wise. It does not mention a debate in sKyid grong.

See Jackson 1987: 18, who indicates that this biography is mentioned in the A mdo chos ’byung of dKon mchog bstan pa seng ge.

The latter’s biography also appears to have been known by the author of the biography studied in Mekata 2009, for in the colophon, the author states that his biography is smaller than the one by ‘Bri ‘tshams pa rin chen dpal (=lHo pa kun mkhyen) and “Bi ci rin chen grags pa.”

See Mekata 2006 for a study of this biography, and Jackson 1987: 19 and Mekata 2006: 63–64 on the attribution of authorship to Ngor chen. Mekata questions this attribution, pointing out that in his Thob yig rgya mtho, Ngor chen refers to Grags pa rgyal mtshan’s Bla ma rgyud pa bod kyi lo rgyis, Bla ma dam pa’s Bla ma bsgyud rnam thar, and a Bla ma bsgyud pa’i rnam thar Zhib mo of unidentified authorship, but does not mention the seven biographical works listed in the colophon of the gSung sgros ma. The gSung sgros ma is sometimes attributed to ‘Phags pa, as is the case for instance in the life of hagiographies of Lam ’bras teachers compiled by Lama Choedak T. Yuthok (http://www.sacred-texts.com/bud/tib/sakya-la.htm). The account of the debate found in the gSung sgros ma repeats the one from the biography by Zhang rgyal ba dpal (Zhang rnam thar), a work also mentioned in its colophon.

See notably the texts mentioned in n. 38.

The Mu stegs tshigs bcad consists of 12 lines of 15 syllables, and of 8 lines of 8 syllables, followed by a colophon in prosa (see appendix 2). The verses themselves are non-specific; they represent a colorful description of Indian representatives of various non-Buddhist currents, and claim the superiority of the Buddhist teaching and that of Sa pan as a subduer of non-Buddhist teachers. It is the colophon that specifies: “In the center of Tshong dus, at a place near the temple of the Aryavati in sKyid grong, Mang yul, the six non-Buddhist teachers, ‘Phrog byed dga’ ba, etc., having been vanquished, converted to Buddhism [lit.: entered into the Buddha’s teaching]; this was composed at the time of their ordination.” Mu stegs tshigs bcad 220b2–3: mang yul skiyd grong ‘phags pa wa ti’i gtsug lag khang dang nge ba’i sat’ cha / tshong dus kyi dbus su / ‘phrog byed dga’ ba la sogs pa / mu stegs kyi ston pa drug tham par byas ma / sangs rgyas kyi bstan pa la bcug ste / rab tu byung ba’i dus su sgyar ba’o //.

I take “Tshong dus” to be an orthographic variant of Tshong ‘dus, that is, a toponyme. Tucci translates literally “in the middle of the market place” (Tucci 1949: 680 n. 36).

They are, in the sources consulted, the accounts by Zhang rgyal ba dpal (Zhang rnam thar), sTag tshang Lo tsa ba, Sangs rgyas phun tshogs Ngor chen (Ngog chos ’byung), Zhu chen (IDe mig), Thu’u bkwan Chos kyi nyi ma (Grub mtha’ shel gyi me long). Śākya mchog ldan’s brief account (Chos ’khor rnam gzhag),
2.2 Place and time

The sources agree on the location of the debate, sKyid grong, and some locate it more precisely in the village of Tshong dus (sometimes spelled Tshong dus), in Mang yul, in the vicinity of the Áryavati temple. sKyid grong (the name designates a district as well as a town) is situated near the present border of Nepal, about 200km north of Kathmandu (ca. 28°, 85°).

Invaded by the kingdom of Ya rtse (south-west of sPu rang) in the late 30s of the thirteenth century, in 1267 it became part of the Mang yul gung thang kingdom, which was under Sa skya pa jurisdiction during the Sa skya-Yuan rule of Tibet. Since 1960, sKyid grong has been included in the gZhis ka rtse prefecture of the Tibet Autonomous Region. The Áryavati temple, or Phags pa lha khang, was, until 1959, the home of the Áryavati bzang po figure, one of the four or five “brothers Árya-Avalokiteśvara,” which is nowadays kept in Dharamsala.

That Sa pa’s visit to sKyid grong is confirmed by local sources that mention the members of local families who received teachings from him; some of these sources also mention Sa pa’s victory over a non-Buddhist but do not appear to provide a date for it.

The event precedes Sa pa’s departure to Ködan’s court in 1244. A few biographers specify a date for it: Sa pa’s 51st year (i.e., 1232) according to Zhu chen Tshul khrims rin chen (1700–1769?); Sa pa’s 59th year (i.e., 1240) according to Mang thos Klu sgrub rgya mtsho (1523–1594/96) and Sangs rgyas phun tshogs Ngor chen (1649–1705).

That Sa pa visited sKyid grong is confirmed by local sources that mention the members of local families who received teachings from him; some of these sources also mention Sa pa’s victory over a non-Buddhist but do not appear to provide a date for it.

on the other hand, provides original details not found elsewhere. He states for instance that the debate was held in Sanskrit (see n. 133).

19 Spelt “sKyid rong” by lHo pa kun mkhyen (lHo rnam thar 53a6), “sKyi grong” by Bla ma dam pa (Bla ma brgyud rnam thar A 41a4; B 36b6), “Kyi grong” by Bo dong Pan chen (Lam 'bras lo rgyus 70b6), and “Khyi rong” by sTag tshang rdzong pa dPal ’byor bzang po (rGya bod yig tshang 323,3). Sakyā mchog ldan (Chos ’khor rnam gzhag 5b4) locates the event in “sKyid pa’i grong khyer” (“the town of happy people”). According to Vitali (2007: 287, n. 3), the name sKyid grong seems to be an abridgement of “sKyid pa’i grong khyer,” or of “sKyid mi grong bdun” (“the seven villages of happy people”).

These four indications pertaining to the location of the debate occur together in the early biography of lHo pa kun mkhyen and in the “Verses of the subduing of the six non-Buddhist teachers.” Some later sources mention only the temple (bsTan rtsis, Ngor chos ’byang), some only sKyid grong (Bla ma brgyud rnam thar, sDom gsum legs bshad, rGya bod yig tshang, sTag tshang gzung tibs, Grub miha’ shel gzi me long).

20 Vitali (2003: 74) situates the first war between the Ya rtse and Gung thang kingdoms between 1235 and 1239. According to Everding (2000: 373–374), the invasion of the Ya rtse troops in Gung thang must be dated with 1238 as terminus post quem.

On the early history of sKyid grong, see Everding 2000 on the kingdom of Mang yul Gung thang from the thirteenth to the seventeenth century and the chronology of mNga’ ris skor gsum from the tenth to the fifteenth century in Vitali 2003. Vitali 2007 deals with the history of two noble families of sKyid grong.

22 Mang thos’s account is found in bsTan rtsis 304,11–16. Cf. Everding 2000: 354, n. 903. Sangs rgyas phun tshogs’s account (Ngor chos ’byang 316,6–7) is literally identical to it. Zhu chen’s account (lDe mig 41b3–6) is possibly based on the one by Sang rgyas phun tshogs, but it is somewhat more developed, and proposes a different date for the event.

23 See Vitali 2007: 301–302. Vitali cites from the rTen gsum gzhegs pa’i dkar chag, a text from the 17th century that mentions the debate in sKyid grong in connection with Sa pan’s meeting with Bla chen Nyi ma, also known as “Jam dpal gling pa.” The debate is mentioned also in the Byams pa phun tshogs kyi rnam thar, in connection with Sa pan’s invitation to gNas Byang chub gling bya Khang ston ’Od zer rgyal mtshan and his brother
Clapping hands in sKyid grong?

It remains a moot point whether the debate coincided with the visit to sKyid grong of Sa pa’s nephew, ’Phags pa Blo gros rgyal mtshan (1235–1280). According to Zhu chen, who situates the debate in 1232, ’Phags pa accompanied his uncle to sKyid grong in his fourth year, i.e., in 1238; according to Mang thos, ’Phags pa came with him in his sixth year, i.e., in 1240. Everding argues in favor of the coincidence of ’Phags pa’s visit with the debate on the basis of Mang thos’s account, but rejects the date of 1240 and instead proposes the year 1238 in view of historical sources that mention the meeting of Sa pa with rGyal ba Yang dgon pa on his way to Khab Gung thang in 1237. The debate would thus have happened before the invasion of the Ya rtse troops in Gung thang, which Everding situates in 1238 or 1239.

2.3 Actors

The sources also agree on the identity of Sa pa’s opponent: a group of six non-Buddhist teachers, one of whom is identified by name as ’Phrog byed dga’ bo or ’Phrog byed dga’ ba. None of the Tibetan sources I consulted suggest a Sanskrit equivalent, but “Harinanda is a likely reconstruction, often met with in modern secondary literature.”

According to some versions, a few disciples of Sa pa—including ’U yug pa Rigs pa’i seng ge — were also present at this occasion. The latter’s biography of Sa pa is unfortunately not extant. Considering the inglorious role attributed to him in the versions that mention his presence at sKyid grong (’U yug pa and others are said to flee as the debate becomes heated), it would have been interesting to hear his side of the story.

---

26 One finds for the group of opponents the expressions mu stegs kyi ston pa drug, phyi rol pa’i ston pa drug, phyi rol pa’i mkhas pa chen po drug, phas kyi rgal ba ngan pa drug. Some sources (such as Sakya mchog Idan’s Chos ’khor rnam gzhag and Ngag dbang blo bzang rgya mtsho’s Dalai lama glu dbyangs) do not specify the number of the opponents. Yar klungs pa specifies that they are “clotted-hair followers of the god Brahmana” (Yar klungs rnam thar ‘bring 34b1: dbang phyug tshangs pa’i rjes ‘brang ral pa can’). Sakya mchog Idan considers ’Phrog byed dga’ bo to be the teacher of the others (Chos ’khor rnam gzhag 5b5: phrog byed dga’ bo slob ma’i tshogs dang bas pa).
27 Das (1882: 19) suggests the Sanskrit “Samkharadhvaja.” Bosson (1969: 28 n. 18) cites a Mongol source dating to the end of the eighteenth century, the Subhasidi-yin taiiburu čindamani-yin tüksgür kenenekō (Bosson describes this text as a revised version of Rin chen dpal bzang po’s Tibetan commentary of the Subhàṣītātmanidhi, composed by Blo bzang tshul khrims), that renders his name phonetically as “Nanthihari.”
28 The Yar klungs rnam thar ‘bring 32b2–3 mentions “’U yug bzang rings la sogṣ,” which might refer on the one hand to ’U yug pa bsod nams seng ge (/rig[š] pa’i seng ge) (?-1253) and on the other hand to bZang rings. The latter name is mentioned together with that of ’U yug pa among the “nine sons of gNyal zhig (=gNyal zhig po ’jam pa’i rdo rje)” (gnyal zhig gi bu dgu) in the Deb sngon (407, 12), which adds that he taught at Khro phu. Blo bzangchos kyi rgyal mtshan, who probably relies on Yar klungs pa or some similar account, mentions a variant of the same names (Chos rje glu dbyangs 4b6: Od yug bzang ring la sogṣ pa). Rin spungs pa mentions “’O yug pa” rig pa’i seng ge la sogṣ” (“jam dbyangs legs lam 105a1; note: words appearing within pointed brackets are interlinear notes). “’O yug pa” appears to be a common variant for “’U yug pa,” found also for instance in rGya bod yig tshang 323,14.
While being remarkably consistent regarding the location of the event and the identification of the opponents, the sources at our disposal display, on the other hand, a range of distinct scenarios in the narration of the debate and of its outcome. Sources of later date show a combination of elements that can, for the most part, be traced back to the earliest accounts from the thirteenth century. The sources that give a substantial account of the event can be distinguished in two groups based on the narrative lines they follow:

1. A first type of scenario, which will be fleshed out in the next section, finds its earliest portrayal in the biography composed by lHo pa kun mkhyen. lHo pa’s narrative is repeated with a few changes by Bla ma dam pa bSod nams rgyal mtshan (1312–1375) when dealing with Sa pa’s life in a series of lives of Lam ‘bras teachers, and Bla ma dam pa’s version is repeated in a work of the same type included in the collected works of Bo dong Pa chen Phyogs las rnam rgyal (1376–1451).9 IHo pa’s version also appears to be the source of the biographical accounts by sPos khang pa Rin chen rgyal mtshan (fl. early 15th c.) and Go rams pa bSod nams seng ge (1429–1489) (in an abbreviated version for the latter) that are included in these authors’ respective commentaries on Sa pa’s sDom gsum rab dbye.10 Glo bo mkhan chen’s (1456–1532) account in his commentary on the mKhas ‘jug (mKhas ‘jug rnam bshad 22a3–24a4) constitutes an almost literal repetition of IHo pa’s text. Glo bo mkhan chen’s account is, in turn, repeated quasi verbatim by A mes zhabs Ngag dbang kun dga’ bsod nams (1597–1659) in his Sa skya chronicles (A mes gdung rabs 108–110).11 Many elements of this first scenario are also reflected in the lengthy versified biography by Rin spungs pa Ngag dbang ‘jig rten dbang phyug grags pa/’jigs med grags pa (1542–1625?) composed in 1579, whose author seems to have known also the second scenario.12

2. The second type of scenario is found at the earliest in the versified biography by Yar klungs pa (Grags pa rgyal mtshan?) (Yar klungs rnam thar ’bring), but Yar klungs pa’s account is to my opinion observably a summarized version of a more elaborate one.13 Characteristic of this alternative

---

9 See Bla ma bgyud rnam thar A 41a2–b5, B 36b4–37a6, and Lam ‘bras lo rgyus 70b3–71b4. In what follows, I will speak of the second work as a work by Bo dong even though its author is not identified (see Jackson 1987: 20).
10 See sDom gsum legs bshad 9b4–11a3 and sDom gsum dgos gsal 16a(‘og ma)6–17a4.
11 See the appendix 1 for an edition of the text recording the variants in these versions.
12 ‘jam dbyangs legs lam 101b5ff. This manuscript includes many small explanatory notes that often refer to a “rab riog gi rgyan,” possibly an earlier work used as a source by the author.
13 On the authorship of this work, see the discussion in n. 11 above. The Lam ‘bras slob bshad introduces this seven-folio text as a “medium biography” (rnam par thar pa ’bring po). The colophon, which is maybe not from the hand of the author (see Jackson 1987: 33, n. 6), also specifies that it is a version of medium length (bstd pa bar pa). Jackson (ibid.) notes that Sangs rgyas phun tshogs credits Yar klungs pa Grags pa rgyal mtshan with a short version (bsdus pa), but according to Mekata 2009, this would refer to the rNam par thar pa mdar bsdus pa or Chos rgyal ma, not to the rNam par thar pa ’bring po. Mekata argues that in spite of the term “’bring po” that suggests the existence of another, lost work of greater length, the fact that all the citations whose source is identified as “rNam thar rgyas pa” in the anonymous manuscript she studied are found in the Yar klungs rnam thar ’bring speaks against the existence of a larger version. This is, to my opinion, not a conclusive argument. On the one hand, the description “rNam thar rgyas pa” may hint to the relative size of the work (in comparison with the “rNam thar bsdus pa”) rather than to its original title. Also, one must leave open the option that there is indeed a larger version, but that it does not differ from the medium one as far as the passages cited in the anonymous manuscript are
Clapping hands in sKyid grong?

scenario are (i) the length of the debate, which is said to last thirteen days, twelve days during which the non-Buddhist debaters prevail, followed by a reversal on the thirteenth day; (ii) supernatural elements, in particular the intervention of Mañjuśrī to support Sa pa; (iii) the gory death of ‘Phrog byed dga’ bo when, following his defeat and conversion, he attempts to follow Sa pa into Tibet. All or some of these elements are found also in the versified account by the First Pan chen Blo bzang chos kyi rgyal mtshan (1570–1662), in the shorter prose version by the Fifth Dalai Lama Ngag dbang Blo bzang rgya mtsho (1617–1682) in his Annals of Tibet, as well as in ‘Jigs med nam mkha’’s (1768–1822) Hor chos ‘byung. This scenario, in particular the gruesome death of ‘Phrog byed dga’ bo, is also reflected in works associated not with Sa pa, but with the Jo bo of sKyid grong. The modern Sa skya pa compilation by Sherab Gyaltse Rinpoche (1983: 18) also favors this second type of scenario.

...
3. lHo pa Kun mkhyen’s narrative

The present paper concentrates on the scenario presented in the earliest available biography of Sa skya Pandita, that by lHo pa Kun mkhyen Rin chen dpal. It is indeed the most relevant for our present purpose insofar as it provides an explicit account of a verbal exchange between the two parties, an account that narratives that opt for a scenario involving supernatural events commonly leave out.

lHo pa, who was born in the twelfth or thirteenth century, has been a student of Sa skya Pandita, but also of Śākyasriḥadra, Khro phyu lo tsā ba Byams pa dpal, and bkA’ gdams pa masters such as 'Brom gzhon nu blo gros. He seems to have been particularly active in the field of epistemology: Glo bo mkhan chen lists him as one of the “commentators of the purport” (don gyi ‘grel byed) of the Tshad ma rigs gter and author of a work entitled sDe bdun gsal ba'i rgyan. He also mentions his views on several topics in his own commentary on the Rigs gter. Śākya mchog ldan indicates for his part that lHo pa was well-known among Sa pa’s direct students who specialized in the Praṃāṇavārttikā.

lHo pa’s biography of Sa skya Pandita entitled dPal ldan sa skya pandita'i rnam thar (hereafter: lHo rnam thar) has been published as part of a collection of biographies of the masters included in the Sa skya pa lineage of Lam 'bras teaching. It was composed while Sa pa was still alive, before his departure for Kōdan’s court in 1244, and after the debate, which, as discussed above, is probably to be situated between 1232 and 1240, possibly in 1238. lHo pa’s text ends with brief allusion to a meeting with Sa pa while the latter is residing at the hermitage (dben gnas) of dGa’ ldan, in dBus. Even though lHo pa might not have been an eye-witness to the debate, his narrative provides us with a version that is close in time to the event and by someone who was close to Sa pa. One cannot assume that Sa pa read and approved lHo pa’s biography based on the allusion to their encounter in dBus, although the very allusion might well constitute an attempt at providing authenticity to the text by suggesting that he did.

The sKyid grong debate is introduced towards the end of lHo pa’s biography (53b4–54a3), after the account of Sa pa’s studies. It follows a

40 Information from TBRC (ref. P6145).
41 Cf. van der Kuijp 1986: 54. This mention is found in gSal byed 298,23–24: ... kun mkhyen lho pa sde bdun gsal ba ste // don gyi ‘grel byed rnam byung rnam gsun byung //. The full title of lHo pa’s work, sDe bdun gsal ba'i rgyan, is mentioned for instance in Rigs gter nyi ma 256,7–8. According to van der Kuijp (1986: 55), this work could have been, rather than a commentary on the Rigs gter, an independent work of epistemology along the same line.
42 See for instance on the topic of mānasapratyākṣa (Rigs gter nyi ma 231ff.) in Rigs gter nyi ma 188–189. Glo bo mkhan chen cites lHo pa kun mkhyen’s views twice on this occasion. The first quote is a literal citation in verses; it is uncertain whether the second quote, in prose, is a citation or a paraphrase. Glo bo mkhan chen also gives a longer version in verse on the topic of prasanga in Rigs gter nyi ma 256.
43 Chos 'khor rnam gzha' 7a4–5: te ra pa byams mgon dang / ldong ston shes rab dpal dang / dkar shadgra dang shar pa shes rab 'byung gnas / nag pug gnyis nang / lho pa kun mkhyen la sogs dangs kyi slo ma nram 'grel mkhas par mkhyen pa dag yin zhes dangs la // / lHo rnam thar 56b6–57a1: choi kyi rgyal po nyid dbu ru'i klungs kyi shod kyi dben gnas dga' ldan na bzhugs pa'i tsho / de las byung phugs su cung zad cing byrog pa'i sa'i char / shadgra'i dge sloss / bring mtshams kyi btsun pa rin chen dpal gyis bslubs pa'o //. Jackson (1987: 32, n. 2) transcribes “klungs skyi shod” and states on this basis that “Sa pa was staying at sKyid shod dGa’ ldan” (ibid, p. 28). On the reading “dbu ru’i klungs kyi shod kyi dben gnas dga’ ldan,” “Klings kyi shod” could refer to the location of the hermitage in dBus.
Clapping hands in sKyid grong?

summarized presentation of Sa pa’s realizations and is included among the detailed accounts of his accomplishments. The debate of sKyid grong is not included in a chronological list of events, nor is it presented as an explicit illustration of Sa pa’s capacities as a debater. It is rather introduced as an episode in the long-lasting struggle of Buddhism against non-Buddhist opponents. lHo pa enumerates followers of the great sage Kapila (i.e., the Sāṃkhyaśas), the rśi Vyāsa (i.e., the adepts of the Veda), Kaññada (i.e., the Naiyāyikas/Vaiśēśikas), and adepts of dBang phyug (Īśvara = Śiva), Tshangs pa’ (Brahmā), Nor lhai’i bu (Vāsudeva = Viśṇu), sByin za (Agni), and of the yet unidentified Nyin mo long pa (lit. “sunrise,” i.e., Śūrya? or one of the Asvins?). These non-Buddhist forces at work, among which Sa pa’s opponents are to be included, are said to be “roaming and wandering about in the southern regions” — that is, as Go rams pa specifies, “India.”

Structure of lHo pa’s narrative

One can distinguish several steps in lHo pa’s narrative: I. a prelude that precedes the actual meeting of the opponents; II. the meeting of the two parties; III. the debate proper; IV. the unfolding of the dispute; V. the citation of the “Verses of the subduing of the six non-Buddhist teachers.”

I. Prelude

The prelude informs us about (i) the identity of Sa pa’s opponents — the six “outsider” teachers (phri ro pa’i ston pa drug), ’Throg byed dga’ bo, etc.; (ii) the location of the meeting — Tshong ’dus, in the vicinity of the Aryanavis-temple situated in sKyid (g)rong, Mang yul; and (iii) the circumstances or motivation that led the debaters to be present. No reason is given for Sa pa’s presence in sKyid grong, but the non-Buddhist teachers are said to have come on account of a specific resolution:

Let us go to the Land of Snow, and there we will overturn those who live there who, while pretending to be Buddhist practitioners, have taken up practices involving women (bud med kyi brtul zhugs) and adhere to bad views and conducts.

---

65 lHo rnam thar 53a2–3: de ltor na de dag gi ni bstag cag gi ston pa ’dis gang zhi g nga mngon du ni mdzad pa’i shes bya’i gnas mdo tsam zhi g brjod nas / da ni de’i phrin las kyi bye brag cung zad smod na /
66 lHo pa situates the place in relation to Bodhgayā (byang chub kyi snying po rdo rje gdan), namely 6 yojanas (dpag tshad drug) to the north. This measure should be corrected to the more plausible “60 yojana” (dpag tshad bcu phrag drug) found in the parallel versions of Glo bo mkhan chen and A mes zhabs (see appendix 1), as well as in Rin spungs pa’s version (Jam dbyangs legs lam 102b6–103a1).
67 Glo bo mkhan chen and A mes zhabs read “dge slong,” i.e., “Buddhist monks.”
68 This expression most likely hints at sexual practices. sPos khang pa’s version adds drinking to women (sDom gsum legs bshad 10a3: chang dang bud med kyi brtul zhugs can). In an oral commentary on the History of the Sa skya sect (www.thlib.org/avarch/mediaflowcat/framesets/view_transcript.php?stylesheet=2&transcriptId=1797), the expression “bud med kyi brtul zhugs” is glossed as “spyod pa smad du byung” (bud med kyi brtul zhugs de ni rbad de bod kyi dper na / dge bshes dge slong de gas de gang yin zer na / dper na spyod pa smad du byung ba de / de ni zhi zhing du bā de’ dras red pa /). The expression also occurs in the Vinayakārīkā
In lh’o pa’s version (as well as the parallel versions of Bla ma dam pa, Bo dong and sPos khang pa), the addressee of this criticism bears the explicit mark of the plural. There is no suggestion that the non-Buddhist teachers were specifically looking to have a discussion with Sa pa as other biographies are hinting at.

II. The meeting

The meeting of the debaters is described briefly:

When the previously mentioned six teachers arrived, all of them paid homage neither to the Dharma-master [i.e., Sa pa] nor to the image of the Sugata; they took seats, having uttered a very few blessings and praiseworthy verses.

The first encounter takes the form of an informal confrontation in which the opponent’s behavior, i.e., the six teachers’ lack of respect for the image of the Buddha anticipates their subsequent statement that “they have not taken refuge in the Buddha’s teaching” (see below). This depiction of the opponent exhibiting conspicuous pride (an attitude repeatedly attributed to him in the various narratives) may serve a particular function in the context of the narrative: as pointed out by Cabezón (2008: 80), the pride of an opponent is generally a rhetorical sign that he is about to be defeated.

It is not clear whether this first encounter signifies the beginning of a formal debate acknowledged as such by both parties. The events that follow, however, are interpreted as such by the author of the narrative.

(ACIP TD10165, 129b5: ’dul ba tshig le’ur byas pa) in a passage instructing that “one who is seized by desire upon seeing one engaged in a practice involving women, or one who has taken vows and, upon seeing a woman, is seized by desire, should not stay there longer; they should leave as soon as possible” (gang na bud med kyi brtal zhugs can la mthong nas chags par byed dam! gang na brtal zhugs can gqis bud med la mthong nas chags par byed na der yang yun ring du gnis par mi bya ste // ’ma’ur ba kho nar de nas ’gro bar bya’u o //).

See appendix 1 for the Tibetan text of this and subsequently translated passages from lh’o pa’s biography.

Some sources indeed present the coming of the non-Buddhists as a consequence of Sa pa’s reputation in India. sTag tshang Lo tsā ba (1405–after 1477?) attributes it even more specifically to Sa pa’s criticism of non-Buddhists in the Rigs gter (or more specifically, in the introductory verses), which, according to him, had been translated into Sanskrit (sTag tshang gdung rabs 18b1–2: rigs gter bud skad las rgya skad du bsgyur te rdo rje gdan du phibs pa’i mchod brjod kyi tshig la ma brad pas rgyen byas nas rdod du yongs pa; cf. van der Kuijp 1993a: 150). Rin spungs pa, as reported in Rhoton 2002: 15, similarly attributes their coming to the Rigs gter having been translated into Sanskrit by students of Śākyasībhadrā. Cf. ’jam dbyangs legs lam 102a1–3: khyad par pan chen <shâ kya shrt’i>: slob ma mchog rnaams kyis // rto’gs ge’i ’khrul <pa>: ’jams <par byed sa pan>: nyid <khyi>: gsungs <shad ma>: rig pa’i gter <ches bya ba de> // ’chi med <lha>: grong gi yi ger <la itsa na>: ’khrungs pa’i <am bkod pa> skyes <byang po> // ma <rgya gar baa rnaams kyis>: bu’i rgyan du yun ring <po’i bar la> mza’as par bukti <no> //). In the modern compilation by Amipa (1987: 59), the Rigs gter is said to have been translated in Sanskrit by Sa pa himself.

sPos khang pa’s account sets the first meeting in a friendly atmosphere: “As they came to sKyid grong, none of the other Tibetan “Three-basket-holders” (tripitakakalātra) felt up to it. It was thus the Dharma-master himself [i.e., Sa pa] who made the opportunity of a debate. They said sincerely to one another “Have you been well? Welcome!” and sat down smiling.” (Tib. text in appendix 1.)
III. The debate proper

One can distinguish three steps in the process of the debate as recounted by lHo pa: [III.1] First, a dialectical exchange whose contents lHo pa makes explicit, which includes a statement by Sa pa’s opponent and a reply by Sa pa. This part of the debate will be dealt with in detail in section 4 below. This explicit argument is followed by two sequences of arguments that are merely suggested:

[III.2] As those [non-Buddhist] teachers were overwhelmed and depressed, it was the occasion for an elaborate speech: he [i.e., Sa pa] refuted and defeated the bad teachers individually, leaving them speechless. [III.3] Then, once more, he removed the filth of the pride of all the bad views.

The first sequence [III.2] is described with terms that relate to a formal debate: refutation (sun phyung) and defeating (pham par mdzad). The second [III.3] does not suggest a dialectical exchange, but rather a one-sided argumentative explanation by Sa pa.

IV. The outcome of the debate

In lHo pa’s text and other biographies that follow this first scenario, the debate ends with the conversion of Sa pa’s opponent, symbolized by the ritual shearing of his clotted hairs (ral pa’i khur bregs nas nyid kyi thad du rab tu byung). The parallel versions of sPos khang pa, Go rams pa, Glo bo mkhan chen and A mes zhabs all add that the hairs were kept in a temple in Sa skya, and were still there at the time of writing (lta da yang yod), but as these authors repeat each other (almost literally in the case of A mes zhabs), this does not guarantee that the later ones had themselves ascertained the presence of the hairs. The same caution applies with regard to similar mentions by the Fifth Dalai Lama in the seventeenth century and in 1818 by ‘Jigs med nam mkha’. In the description of a block print representing Sa pa debating with ‘Phrog bye dga’ bo, Jeff Watt — who I assume speaks on the basis of his own experience or of an eye-witness testimony — mentions that “Until 1959, the braid of Harinanda was kept before an image of Manjushri in the Utse Nying Sarma temple in the town of Sakya.”

---

53 In sPos khang pa’s version, the Brahmins set forth to establish their scriptures by putting forward whatever logical reasons come to their mind, and Sa pa defeats them with logic, leaving them speechless.
54 lHo rnam thar reads phyung, but all the parallel versions read sun phyung (see appendix 1).
55 sPos khang pa uses the expression tshar bcad (see appendix 1).
56 The cutting of ‘Phrog bye dga’ bo’s hair is omitted in Bo dong’s parallel version (see appendix 1).
57 Das (1882: 20) and Bosson (1969: 4) have it that the head of ‘Phrog bye dga’ bo was tied to the pillar in the great temple of Sa skya.
58 Dalai lama glu dbyangs: shi ba’i ral pa’i cod pan dpal ldan sa skya’i ka ba’i mdzes byed du yod do /
Hor chos ‘byung 77,9–11: ral pa rnam rgyal ba’i bstan pa la bya ba mdzad pa’i snyan grags kyi dril rgya sngog pa’i rten du / da lta yang dpal ldan sa skya’i gtug lag khang gi ka rgyan la yod dol/.
V. Verses composed by Sa skya Paññita

lHo pa’s narrative ends with the citation of verses that, as mentioned above (see “3.2 Sources”), also constitute an independent work among Sa pa’s writings.61 The verses cited by lHo pa, as well as Go rams pa, Glo bo mkhan chen and A mes zhabs correspond, with a few shared variants (see the appendix 2), to the ones found in the text of the verses published in the Sa skya bka’ bum.

lHo pa introduces the quotation by saying:

Having thought ‘should there arise any discouragement pertaining to the teaching of this King of the Śākya, it should be disciplined once more,’ he said the following...

4. The debate

The part of the debate that I will focus on in this section is the verbal exchange that includes a statement by the non-Buddhists and a reply by Sa skya Paññita.

4.1. The opponent’s statement

The opponent’s statement is presented as follows:

They haughtily declared: ‘Our entire caste started from the guru Brahmā.62 Until these days we have not relied on the teaching of Gautama, we have not taken refuge in the Three Jewels. We are the perfectly pure breed of the rṣis.’.63

By this statement, Sa paññ’s opponent makes a claim as to (i) a genetic dependence on Brahmā; (ii) rejection, or non-reliance on Buddhism and the Buddha; (iii) the purity of his own lineage. The third claim provides, to some extent, an echo to the main theme of the non-Buddhist’s “motivation

61 These verses are omitted in Bo dong and sPos khang pa’s parallel versions. They are also not found in biographical accounts that adopt the second type of scenario, an exception being ‘Jigs med nam mkha’’s Hor chos ’byung (77,4–7), which cites the first verse (in the variant form of two pādas: rgya mtsho’i gos can rgya mtsho’i mtha’ / sa chen ’di na la chen po) and the last four pādas. Huth understands the verses to be spoken by ‘Phrog byed dga’ ba.

62 I follow here Glo bo mkhan chen and A mes zhabs’s reading “nged kyi rigs thams cad ni...” Bla ma dam pa and Bo dong read “nged kyi rigs thams cad kyi bla ma...,” namely “our caste started from the universal guru, Brahmā.” The term “rīgga” that occurs twice in this statement was translated here by “caste” and “breed.” It could be read, at least in the first case, in the sense of “philosophy,” considering that Sa paññ’s answer addresses the worthiness of Brahmā as a teacher. However, I deemed it more likely that the first sentence is referring to the Puranic myth of the origination of the Brahmins’ caste from Brahmā’s mouth.

63 A similar versified account is found in the rnam thar by Rin spungs pa (’jam dbyangs legs lam 1036b–104a2): de nas ‘phrog byed ’di skad lo // brtan g.yo’i byed po gcig pu par // srid pas bsksos ba’i <lha> tshangs chen las // lla’g pa’i skyabs gzhan dmigs su med // <mes po> de nyid nas btsams <te> drang srong <gsi> rgyud // gtsang ma’i rigs ’dzin <pa> kho bo cag // <dkon> mchod gsum <gsi> skyabs <gnas> dang gau ta nu’i // ring lugs dag la llos ma myong <ngo zhes> //.
Clapping hands in sKyid grong?

statement” (see I) in which they invoked the impure conduct of Tibetan Buddhist practitioners. The second claim expresses a rejection of Buddhism both in terms of refuge and teaching. Combined with the reference to Brahmā in the first claim, one can draw an opposition both in terms of the teacher one should rely on (Śākyamuni Gautama vs. Brahmā) and the teaching to follow. In a nutshell: the pure Brahmins that originated from and rely on Brahmā are opposed to the impure Tibetan Buddhist practitioners who take refuge in the Buddha and follow his teaching.

4.2. Sa pañ’s argument

Sa pañ’s reply immediately follows:

At this moment, the Dharma-master [i.e., Sa pañ] said:

[1] However clean this Brahmā may be, [2] he himself has much respect for [our] teacher; [3] but is he not overcome by slumber due to great mental confusion?

[4] As it is said:

The excellent four-armed one, whose faces are turned in the twice-halved-sixteen [= four] directions,

Ricitor of the Rgveda, knowing the rituals of [Mantra]-recitation and expiation,\(^\text{65}\)

This Brahmā, whose birth-place is the spotless lotus, he, too, slumbers.

[5] But our teacher, possessor of the ten powers, is always shining forth/awake) like/in a beautiful dawn’.\(^\text{66}\)

\(^{\text{64}}\) I read the beginning of this sentence (ci tshangs pa de ni) as a pun on the word tshangs pa, which is not only the Tibetan name of Brahmā but also an adjective meaning “pure.” The allusion to Brahmā’s (etymologically grounded) purity echoes here the opponent’s claim as to the purity of the Brahmins issued from Brahmā.

\(^{\text{65}}\) I follow here the reading of the stotra in D (see below n. 72), i.e. nges pa instead of nges pa.

\(^{\text{66}}\) I base my understanding of this sentence on the parallel in sPos khang pa’s version: “This Brahmā, he has much respect for our teacher and he took refuge in him.” Episodes of interaction between Brahmā and Śākyamuni that might be relevant to this reference are for instance the gods’ visit to the newborn Śākyamuni, or Brahmā’s request to Śākyamuni, following his

---

\(^{\text{65}}\) The parallel versions only have minor variants. They notably differ in identifying what belongs to the verse cited by Sa pañ and what is Sa pañ’s own expression. sPos khang pa does not render the cited verse in a metrical form.

\(^{\text{66}}\) Another possibility is to attribute to the initial “ci” an interjective/interrogative meaning pertaining to the sentence as a whole. Bo dong and sPos khang pa omit the construction with “ci” and simply have “tshangs pa de ni” as the subject.
awakening, to teach what he has understood in order to help other people. A famous episode where Brahmā recognizes Sākyamuni’s superiority as a teacher is found in the Kevaddha Sutta (Dīghanikāya 11). In this text, Brahmā is asked a question about the cessation of fundamental elements. Brahmā boasts about being the creator of the world, but must concede that he is unable to provide an answer and ends up sending the questioner to ask the Buddha.

This part of Sa pan’s statement brings to the fore a contrast between the Brahmins’ attitude towards the Buddha (their lack of respect is made clear both in their initial statement [see 4.1] and their behavior at the beginning of the meeting [see II. The meeting]) and Brahmā’s attitude towards the same. One can also, as does Rin spungs pa (see n. 68), identify a faulty lack of “transitivity” on the part of the opponent: the Brahmins show respect and rely on Brahmā; Brahmā himself shows respect and relies on the Buddha; but the opponent refuses to show respect and rely on the Buddha.

[3] The interrogative form of this sentence is merely rhetorical. Indeed, this statement constitutes a central point of Sa pan’s refutation of the opponent (the consequence to be drawn from this argument will be discussed below): Brahmā sleeps, and this slumber is caused by a state of mental confusion, or ignorance (gti mug, moha), one of the three basic afflictions (nyon mongs, kleśa).69 The connection between the two will be inquired into further in section 5 (“The slumber argument”).

[4] A citation is adduced at this point, whose role appears to be the support of the claim [3] that “Brahmā slumbers.”70 This passage enumerates well-known attributes of Brahmā: the four arms, the four faces (from which he emits the four Vedas), his birth from the lotus (which itself arises from Viṣṇu’s navel). As for Brahmā sleeping, one can trace this feature to accounts, such as the one from the Viṣṇupurāṇa, of the world’s dissolution at the end of a cosmic era (kalpa) or “day of Brahmā,” followed by its recreation after a “night of Brahmā” during which “Brahmā, who is one with Nārāyaṇa, satiate with the demolition of the universe, sleeps upon his serpent-bed — contemplated, the lotus born, by the ascetic inhabitants of the Janaloka.”71

One could have imagined that this citation would find its source in Brahmanical literature — Sa pan would thus be adducing support from the opponent’s own scriptures. One is, however, dealing here with a Buddhist

---

69 sPos khang pa adds “da dung” between gti mug che bas and gnyid kys, meaning that Brahmā is overcome both by mental confusion and slumber, without suggesting a relation between the two.

70 In the biography by Yar klungs pa, the Yar klungs rnam thar ’bring, the enumeration of the “great qualities of Lord Brahmā” is considered to precede the actual debate (Yar klungs rnam thar ’bring 34b2: dbang phyug bshungs pa ’i yon tan che ba brjod // de nas bla ma chos rje slob ma’i bkogs // ’phrog byed ral pa can dang rtsod par brtsam //). Yar klungs pa does not provide an account of the argument and adopts a scenario of the second type, where magical events prevail.

71 Viṣṇupurāṇa 1,3.24–25, translation by H. H. Wilson (1840: 25). See also 6,4.44ff, translated ibid. p. 634. I am grateful to Tomohiro Manabe for pointing out the Viṣṇupurāṇa to me as a source for Brahmā’s sleep.
source. The stanza that Sa paṅ is citing in this narrative can be identified as a verse from the "Suprātaprabhātastotram."

The "Suprātaprabhātastotram" (Tib. Rab tu snga bar nam langs pa) is a hymn of praise to the Buddha composed by the King of Kaśmīr Śrīharṣadeva (ruling maybe from 1113–1125). It was translated into Tibetan by the Indian pandit Rājaśrīnānamitra and the Tibetan translator Ke’u brgad yon tan dpal before the middle of the thirteenth century.

In this hymn, the author praises the Buddha by way of contrast with a number of figures of the Brahmanical pantheon, such as Śiva, Viṣṇu, Brahmā, the sun and moon, etc. These figures are, for the most part, not identified by name (Brahmā is one of the exceptions), but supposedly recognizable by the audience via the characteristic features mentioned in the first three pādas of each stanza.

Sixteen verses of the work follow a common model: the description of the non-Buddhist figures ends, in the third pāda (in one case the second pāda) with the mention that the figure in question sleeps (gnyid log gyur, gnyid log, gnyid mthug log par gyur, nyal ba gyur) — in one occasion, is drunk (myos par gyur). The author of the hymn is obviously well acquainted with the various stories linked to the characters he describes and thus might have in mind specific passages (that I fail to identify) where they are described as sleeping.

The slumber attributed to each Brahmanical deity provides the basis for the contrast introduced in the fourth pāda: there, the Buddha, qualified in each stanza by the feature of the "ten powers" (stobs bcu, daśa[tathāgata] balānī), is praised as being always, as the title of the hymn states, “rab tu

---

72 Among the narratives that cite this verse, Bla ma dam pa and Bo dong (who obviously bases himself on Bla ma dam pa’s account) are the only ones who actually provide an identification of its source. The stanza in the canonical version (D239b4–5) reads: rab mchog lag pa lha pa bcu drug phyed phyed phyed phyed kyi gzhung pa can // velas dang nyes pa’i cho ga shes shing nges brjod rig byed ’don pa po // dri med padma’i skye gnas tshang pa de yang rab tu gnyid log ‘gyur // stobs bcu mnga’ ba khyed ni rtag tu rab tu snga bar sad pa’o /// The citation in lHo pa rnal thar is almost literal, but the omission of the expression “rab tu” in the third stanza makes this line non-metrical. Another difference is the reading “nges pa’i cho ga” shared by biographies that cite this verse, whereas sDe dge has “nyes pa’i cho ga.”

73 Both the sDe dge (D1167, bStod tshogs, Ka 239a4–240b5) and Peking (P2056, 280a1–281b7) versions give the Sanskrit phonetic equivalent “su pra bha ta pra bha ta sto tram.”

74 This hymn is included by Bo Com ldan Rig pa’i ral gri (1227–1305) in his survey of Buddhist literature that was probably written in the late 1260s or early 1270s (van der Kuip and Schaeffer 2009: 51; this text figures under the No 28.28 in ibid: 247). I am currently unable to present any hypothesis pertaining to its popularity and diffusion.

75 A list of the ten powers of the Tathāgata (daśatathāgatabalānī), each of which consists of a special knowledge, is provided in the Mahāyānaptattī, No. 120–129: (1) knowledge of what is established and non-established (sthānatthāsāvatārajñāna); (2) of the maturation of deeds (karmaviparyajñāna); (3) of the various inclinations (nādiḥsahasrārajñāna); (4) of the world with its various realms (nādiḥdvalsārajñāna); (5) of the highness and lowness of the faculties (indriyavārdharajñāna); (6) of the path wherever it goes (sarvatraṇaṃvartaprajñāna); (7) of the affliction, purification, and establishment of meditations (dhyāna), liberation, contemplation (samādhi) and equalisations (sarvadhyānāvivaramokṣasamādhisampanklesa-vyavadharmajñātāṣāra); (8) of memory of previous lives (pūrvaivātivāsusrūṣṭijñāna); (9) of death and birth (cyutputtajñāna); (10) of the destruction of streams/defilements (ādi[s]rājakāya[jñāna]). This rendering of the terms is based on the French translation in Renou and Filliozat 1996: 537 (§ 2278). Anacker (1998: 277 n. 12) lists the ten powers as follows (with slight modification of their order): “(1) one knows with insight, as it is, what can be as what can be, and what can’t be as what can’t be, (2) one knows with insight as
Revue d’Etudes Tibétaines

5. The “slumber argument”

The short statement [3] “Brahmā sleeps due to great mental confusion” constitutes an argument which I will refer to as the “slumber argument.” It is supplemented, in IHo pa’s narrative, with the citation of the stanza from the *Suprātāprabhātastotra* [4] together with the adaptation of its last pāda [5].

they really are, the karmic results of past, future, and present actions, (3) one knows with insight, as they really are, the various elements in the world, (4) one knows with insight, as they are, the various dispositions of other beings, (5) one knows with insight, as they are, practices and the processes of afflictions and alleviations, (6) one knows with insight as they are, the faculties of sentient beings, (7) one knows with insight, as it is, the Path that leads everywhere, (8) one recollects one’s various previous lives, (9) one sees the decrease and rebirth of beings as it is, (10) one realizes the end of the all distress.”

The expression *rtag pa nyid du gnyid sad* occurs in the last of the sixteen verses (that lacks the expression *stobs bcu mnga’ ba*), and *rab tu nam langs* in the following one where it is not opposed to “sleep.”

This is found in various sūtras in the Majjhimanikāya (for instance the Bhagabherava-sutta, Bodhirajakumara-sutta, etc.) and repeated in the Lalitavistara as well as in Āśvaghosa’s Buddhacarita (xiv.86 “At the moment of the fourth watch when the dawn came up and all that moves or moves not was stilled, the great seer reached the stage which knows no alteration, the sovereign leader the state of omniscience” [transl. in Johnston 1995]). Note that the Buddha is also held to enter parinirvāṇa at dawn (cf. Dīghanikāya, Mahāparinibbana-sutta).

As this last sentence, although based on the same source as [4], is not a direct quotation, one can understand why other authors distinguish it from the preceding three pādas, adding “*shes dang*” or “*ces pa dang*” between [4] and [5] (see appendix 1).
Before we investigate what type of effect may have been intended by these statements, it is worth taking a closer look at statement [3]. There is indeed an Indian source which offers a relevant precedent for the association of slumber and mental confusion in an argument against non-Buddhist opponents: Bhāviveka’s Madhyamakārikā (MHK) and its commentary, the Tarkajvālā (TJ), attributed to the same author by most Tibetans.\(^{79}\)

Consideration of the place and role of this argument in these texts will help us drawing out a number of implications that are not explicit in the debate narrative under consideration.

5.1 The “slumber argument” in the Madhyamakārikā and Tarkajvālā

In the ninth chapter of the Madhyamakārikā, commented upon in the corresponding chapter of the Tarkajvālā, Bhāviveka takes up to criticize the Mīmāṃsā.\(^{80}\) When answering to the pūrvapākṣa stated in MHK 9.11, which presents the “way favored (juṣṭa) by gods and seers” as being old, good and reasonable (yuṅktam), Bhāviveka presents a series of arguments that arrive at the ironical conclusion that what is reasonable (yuṅktam) is, rather, to reject it.\(^{81}\) The first of these arguments, expressed in MHK 9.59, targets specifically

---

\(^{79}\) Since the authorship of the Tarkajvālā is of no relevance in the present discussion, I will, for simplicity’s sake, adopt the Tibetan ascription and speak of both MHK and TJ as the works of Bhāviveka. For a detailed discussion of this as yet unsettled issue, see notably Seyfort Ruegg 1990 and Krasser forthcoming.

\(^{80}\) The ninth chapter of the Madhyamakārikā, entitled Mīmāṃsātattvaviniṇayāvatāra, has been edited in Kawasaki 1976 (together with a translation of the pūrvapākṣas) and 1987, and translated in Lindtner 2001. The commentary thereupon is found in TJ D271a2–280b5 (dpal pam gi yis de kho na nyid gtan la dbab pa la ’jug pa le’u dgu pa’i rab tu byed pa brtsgam par bya ste). Kawasaki (1974) summarized the pūrvapākṣas of the Mīmāṃsakas presented in the first 17 verses (commented upon in TJ D271a2–278a1) into seven points: i) the primary importance of sacrificial rites for deliverance; ii) the Vedas are the exclusive authority for the rites prescribed in the śāstras; iii) the Vedas are not a human production (apurūṣakartṛtra), and were revealed by the ancient seers and uninterruptedly transmitted, hence they are free from error; iv) the eternal validity of the Vedas is based on the eternity of the word; v) the Vedas give access to knowledge of matters that are beyond human perception and cannot be inferred; vi) Scriptures are an independent means of knowledge that is never infirmed by reasoning; vii) there is no omniscient being – human beings are not free from error and cannot know suprasensorial matter.

\(^{81}\) MHK 9.11 reads: “This old, good and reasonable way, favored by the gods and the seers, [while] accepted by the wise, this threefold [way] is rejected by women and śūdras who are alien to the contents of the Vedas.” (dvavratajuṣṭas atīṣṭasam puraṇaṁ vartamā avham / vedārthabhojyaḥ śāstraśaṅkara yuṅktam yat tiṣāyate trayty). As noted by Krasser (forthcoming), five arguments, presented in MHK 9.59, 9.94, 9.120, 9.127 and 9.139, mirror the pūrvapākṣa in using the words “yuṅktam yat tiṣāyate trayty,” but, “yuṅktam” being used as an adverb, the phrase now has the meaning “it is reasonable that the threefold [way] should be rejected.” In 9.94 Bhāviveka argues that it should be rejected because the Vedas contain bad logic, in 9.120 because they contain erroneous prescriptions (for instance, that sins can be washed away with water), in 9.127 because they contain detrimental prescriptions (for instance, that one can attain Brahman’s world by jumping into a fire or, the TJ expands, by jumping off a cliff or fasting), in 9.139 because they contain erroneous teachings (such as the teaching that trees have a soul). The uttarapākṣa-section pertaining to MHK 9.11 goes on until MHK 9.151.
these gods that favor the way of the Vedas and, first of all, points to their vicious conduct.\(^{82}\)

Having observed the corrupt conduct of the promulgators of the threefold way (\textit{trayāmārgapraṇaytṛ}), Brahmā, Keśava (= Viṣṇu), Śūlin (= Śiva), it is reasonable to reject the three [Vedas].\(^{83}\)

In the verses that follow — cum TJ and a number of supplementary verses in the Tibetan version — the author proceeds to illustrate these gods’ corrupt behavior and to make explicit the logical link that enables one to go from the observation of such conduct to the conclusion that the Vedas should be rejected.

5.1.1. Illustration of the gods’ corrupt conduct

“Corrupt conduct” (\textit{klesātmikā caryā}), as the expression itself makes clear, is linked with and revealing of the presence of afflictions (\textit{nyon mongṣ, kleṣā}). According to the Buddhist model, the three major afflictions are included in the triad of lust/desire (\textit{dod chags, rāga}), hatred (\textit{zhe sdang, dveṣā}), and mental confusion, or ignorance (\textit{gṭi mug, moha}). To exemplify how the three gods adopt behaviors that instantiate these three, Bhāviveka draws from numerous Vedic, Puranic, and epic sources.\(^{84}\)

For instance, in order to demonstrate Brahmā’s affliction by lust, Bhāviveka recalls Brahmā’s incestuous attraction for Prajāpati’s daughters, hence his own granddaughters, which led him to ejaculate as they were pulling him, some by the hand, some by a tuft of his hair, towards the place where Prajāpati’s sacrifice was taking place — Brahmā’s semen, poured into the sacrificial fire, gave birth to Bṛghu, Āṅgira, etc.\(^{85}\) MHK 9.63 further mentions Brahmā and Śiva’s passion for Tilottama, the beautiful nymph (\textit{apsara}) that caused Śiva to grow four heads, and Brahmā five, in order to be able to contemplate her as she circumambulated them.\(^{86}\)

Śiva’s hatred is illustrated by his arson of Tripura, the Asuras’ capital city, and his plucking out Pūṣṇa’s teeth and Bhaga’s eyes for, respectively,

\(^{82}\) Further arguments targetting the gods address the question of the unity of nature of Brahmā, Śiva and Viṣṇu (MHK 9.90–91ab), the contradiction between their respective statements, as each claims to be the sole creator of the world (MHK 9.89), or the mere possibility of a god that is cause of the universe (MHK 9.95ff.).

\(^{83}\) MHK 9.59: \textit{trayāmārgapraṇaytṛṇām brahmākāśaśvāśā śām / dṛṣṭā klesātmikāṃ caryāṃ yuktā yaṁ tāyaṅyate trayāṃ //}.

\(^{84}\) Brahmā’s affliction with desire is dealt with in the additional Tibetan verses 14–19 (TJ D291a5–7). Further examples involving Viṣṇu and Śiva occur in the course of subsequent discussions, for instance in MHK 9.63, 9.67, etc. Hatred is illustrated principally in MHK 9.64 (TJ D293a2–6), while Brahmā’s murderous activities are recounted in TJ D291b6–7. Mental confusion, according to TJ, is the object of MHK 9.65 (TJ D293a6); see n. 89 below.

\(^{85}\) TJ D291b1–4. The extra Tibetan verse 19 concludes the enumeration of Brahmā’s lustful activities (transl. Kawasaki 1992: 134): “The sexual act of dog and ass is disdainfully treated by the sacred gods. But, what is their difference from such beasts, in case they also have incestuous relations?”

\(^{86}\) We are dealing here with another incestuous passion of Brahmā, as, according to the \textit{Skanda Purāṇa}, Brahmā actually qualifies as Tilottama’s father insofar as he is said to have created her.
laughing and winking at him.⁶⁻⁷ Viṣṇu’s affliction by hate is demonstrated by the evocation of actions (such as destroying entire armies) perpetrated at the time of his incarnation as Kṛṣṇa,⁸ Brahmadeva’s hatred by the murder of various demons (TJ D291b6–7). We will come back to the issue of the “killing of enemies” below (see under 5.1.2.2.i).

Slumber as revealing of mental confusion

Lust and hatred receive significantly more attention than mental confusion. Indeed, when it comes to provide illustrations for this affliction, Bhāviveka lacks vivid anecdotes. According to the TJ, this third affliction is dealt with in MHK 9.65⁹:

Slayer of Brahmā, drinker of intoxicating drinks, libidinous, this is the Lord who supposedly sees the truth; what should one say of those who do not see the truth, who follow his path?¹⁰

In this verse, aside from lust and slaughter (the paragon of hateful behavior), we find the mention of the drinking of alcohol, which might be intended as an illustration of (or a metaphor for?) mental confusion. A more explicit illustration of this third affliction is provided in the TJ in a passage meant to summarize the three afflictions pertaining to Viṣṇu. One finds there, first, a list of the three afflictions (the expression “complete stupidity” [kun du rmongs pa nyid] replaces here mental confusion) and their associated behaviors:

He is subdued by lust, because he stole other people’s wives and riches.
He is subdued by hate, because he killed the Asuras Hayagriva, Sunda, Upasunda, Hiranyakaśipu, Kaṃsa, etc.
He is completely stupid, because he is a follower of the Vedas who deceived Bali, was regaled by Kuce, and stole bsil byed ma (=?)(or let it be stolen?)¹¹

Three illustrations of mental confusion are alluded to in this passage. The first one refers to the episode in which Viṣṇu tricks the Asura Bali (Tib. gtor

---

⁶ MHK 9.64. According to the gloss in TJ D293a4–6, Pūṣṇa’s and Bhaga’s amusement was due to Śiva’s appearance as he showed up late at a sacrifice “his head decorated by a garland of cranes, his body anointed with ash, holding cranes in his hands, and acting infuriated.”

⁷ See notably the extra Tibetan verses 30–31.

⁸ TJ introduces this verse with the words “gthi mug drag po can yang yin te” (TJ D293a6). MHK 9.65: brahmahār madyapah kāntī drṣṭatattvaṃ yuddhavāh / kā kathakṛṣṭatattvānām ** tatpadḥatyanuṁgaṇiṁ†anām // (* Kawasaki ‘atavi; ** Kawasaki ‘atvānām). The expression brahmahāt means here “slayer of Brahmā,” as the Tibetan translation “tshangs bsad” suggests, and not, as translated by Lindtner, one who can “kill a priest.” This is confirmed by MHK 9.90 and TJ D295b5–4, where this epithet of Śiva is explained by the fact that the latter cut off one of Brahmā’s heads.

⁹ TJ D294a2–4; P332b2–5: de la gzhan gyi bud med dang nor ‘phrog par byed pa i phyir chags pas zil gyis mnan pa nyid kyang yin pa ‘ggar ro // rta mug dang sun da (P ‘da’) dang / nye bo’i sun da (P ‘da’) dang / hi ra nu ka sī bu dang / kang sa la sos pa i lha ma yin bsad pa’i phyir zhe sdang gis zil gyis mnan pa yang yin no // gtor ma bslus pa dang / gos yug gi’es (em.; D gyes; P gyi) mgnor (P ‘gtron) du bo pa dang / bsil byed ma phrogs (P ‘phrogs) pa la sos pa rig byed pa nyid kyi phyir kun du rmongs pa nyid kyang yin no. //
ma) at the time of his fifth incarnation as a dwarf (Vāmana). The second could refer to the meeting of Kṛṣṇa with his former fellow student Kucela (Tib. ṡos ngan pa, lit. “poorly clothed”) or Sudāman. Although the latter and his family are starving, Kṛṣṇa eats the rice brought by Kucela as a gift and sends him back without food. The story ends on a happy note: when Kucela comes home, he finds a palace offered by Kṛṣṇa in place of his hut. I am unable to identify a source for the third example.92

Immediately following this list, Bhāviveka introduces what appears to be a citation:

One could also say:

Nārāyana is endowed with lust, because he ravished 16,000 wives, like a bad king;93 or because he was enamored with herdswomen and he enjoyed their erotic games (*rasālī), like any herdsman.

Nārāyana is also endowed with hatred, because he constantly engages in killing, like hunters and fowlers, etc.

Nārāyana is endowed with mental confusion, because he sleeps during four moons, like frogs and snakes.94

In this second passage we find mental confusion illustrated by slumber (gnyid log). Everyone is familiar with Viṣṇu’s cosmic sleep. However, here, the specification “four moons” hints to another event: Viṣṇu’s seasonal yogic-sleep (yogānīdrā) during the monsoon period, a four-month period accordingly called Caturmāsa that runs from the last week of July to the last week of November. The comparison with frogs and snakes (which, in itself, is probably not very flattering) certainly refers here to the hibernating habits of these animals, although, contrary to Viṣṇu, frogs hibernate during the dry season (and for more than four months) and wake up at the beginning of the monsoon, as pictured in the famous “Frog-hymn” of the Rg-Veda.95

Why associate slumber with mental confusion? There is more to this than the simple popular association of a slow mind or lesser intelligence with slumber, a figurative association also reflected in the Buddhist context by

---

92 In the third illustration, bsil byed ma, literally “the cooling one,” could be the name of someone (“ma” possibly indicates a feminine figure) or something (such as a jewel). TJ D295a7–b1 states that Viṣṇu created “Marana” (i.e., “Death”), who ravished bsil byed ma, and that at some point of the story bsil byed ma had “entered into the earth” (sa’i nang du zhugs par gyur pa).

93 This is an allusion to the 16,000 girls enraptured by the demon Nāraka, which Viṣṇu (as Kṛṣṇa) married, supposedly to protect the reputation that they had remained virgins. The story is recounted for instance in the Mahābhārata.

94 TJ D294a4–6; P332b5–7: sred med kyi bu ni ’dod chags dang bcas pa yin te / bud med stong phrag bcu drug ’phrog par byed pa’i phyir rgyal po ngan pa bzhin zhes bya ba’an / phyugs rdzi (D rj) mo dang lhan cig kun du chags (P cig tu chags) shing ’dod pas rtsa ba nyams su myong bar byed pa’i phyir ba lang rdzi gzhan bzhin (P cig tu chags) sred med kyi bu ni zhe sdang dang bcas pa yin te / rtag tu srog gcod pa la bzhugs pa yin pa’i phyir / rinon pa dang / bya b (D pa / ba) la sogs pa bzhin no // sred med kyi bu ni gli mug dang bcas pa yin te / zla ba bzhis barg cu bral la sogs pa bzhin no / . It is possible that this passage, like many others in this section, is issued from a non-Brahmanical source criticizing the gods and refuting the Vedas. TJ (D290b3–4) names the Bhrāhaspatītantra (Hla’i bla ma phur bus bstan pa’i rgyud) as being one such source.

95 See Bender 1917: 187ff. on the frogs’ hibernation habits. Bender notes (ibid., p. 188) that “In the Harivamsa, Viṣṇuparvan 95.23–8803 the frogs croak after having slept eight months. In RV.7.1031,8, 9 the frogs raise their voices after having lain silent for twelve months.”
expressions such as mohanidrā (“the sleep of mental confusion”).96 Sleep is also found in association with mental error in Buddhist philosophical texts: the mental states that take place in sleep are delusive insofar as what appears as their object is in fact not existent. Dharmakīrti explains for instance in PVin 1.29 that people who sleep — just like people deluded by lust, fear, etc. — see things that do not exist as if they where there.97 For philosophers of idealist persuasion, the dream provides an analogy par excellence as a state where objects seem to appear that do not exist in reality.98 Moreover, in addition to constituting pseudo-perceptions in this sense, dream-states also do not allow an awareness of the objects that are actually present, for sleep prevents the unobstructed sensorial perception of these objects. Hence, one who is “sleeping,” whether he is dreaming or lethargic, is one who does not apprehend reality correctly.

There is, however, a difficulty with regard to this explanation. To anticipate our discussion of the rationale behind the slumber argument, one can note already that the relation that is postulated by Bhāviveka between the three afflictions (kleśa) and the corresponding corrupt conduct (kleśātmikā caryā) is a causal one. The presence of afflictions causes one person to act in a certain way, and from the observation of a certain type of conduct, one can infer the presence of the relevant affliction that is its cause. This premise, as we will see, is not unproblematic. In the case of mental confusion and its illustration by the state of slumber, one can raise the question whether some slumber-states might not have another source than mental confusion. Unfortunately, neither the MHK nor the TJ venture an explanation. The Abhidharmakośa (AK) does provide some ground for the association of certain kinds of states comparable to slumber with afflictions and further with a lack of understanding. In particular, stūyna (apathy, torpor) and middha (sloth, languor) are classified among the “manifestly active defilements” (paryaavasthāna) in AK 5.47–48a. Both stūyna and middha have the same action, namely, making the mind lackadaisical, and are nourished by the same five factors: tiredness (tandṛā), dullness (araṇī), yawning (vijṛmhikā), drowsiness after eating (bhakta ‘samatā), mental languidness (cetaso ṭīrṇatva). In AK 5.59 and Bhāṣya, both are described as obstacles (nīvaraṇa) among the defilements (kleśa) and secondary defilements (upakleśa), insofar as they destroy the element of discrimination (praṇāskandha) and thereby generate doubt about the Truths. The Bhāṣya specifies that middha can be good, bad or neutral (but it is either bad or neutral in the Kāmadhātu), and is only a manifestly active defilement in the second case.99

There is thus a background in Buddhist literature for treating slumber as a negative state associated with the absence of mental clarity. Whether a

96 For instance, the sGra sbyor bom pa gyus pa (D133a1–2) explains the “sangs” of sangs rgyas (buddha) in terms of awakening from the sleep of mental confusion (gti mug gi gnyid sangs pa, mohanidrārabuddhatva). David Higgins, whom I thank for this reference, also informed me that many rNying ma sources build on the association of sleep/ignorance and waking/wisdom; an illustration can be found for instance in Klong chen Rab ‘byams’s Theg mchog mdzod (I, 1026.6): kun gzhis gnyid lta bu ‘khrul snang gi rmi ’lan thams cad ’char ba’i rten du gṣur pa las sangs pur byed dgos....
98 See as an example the analogy with sleep in Vasubandhu’s Viṃśatikā.
99 The various sorts of middha are discussed in AK 2.30cd and 5.52cd with reference to the Kāmadhātu.
non-Buddhist opponent would be ready to accept this association is another matter. An investigation of the value attributed to sleep in non-Buddhist systems would exceed the scope of the present paper, but let us just note that if sleep is on occasion negatively connoted in the Brahmanical tradition, it may also constitute an opportunity to access higher truths.

5.1.2. The rationale behind the Madhyamakah\text{\text}s dayak \text{\text}rik \text{\text}Tarkajv\text{\text}s argument

5.1.2.1 Ad personam accusation

The observation of a lustful, hateful, or mentally confused conduct certainly provides the ground for an ad personam accusation. Such an accusation may be used per se, in order to discredit the person. For instance in the case under consideration, Vi\text{\text}u\text{\text}s sins certainly undermine his reputation of “Great man” (purusottama). But there is usually more at stake behind an ad personam accusation. Such accusations, in a form termed “ad hominem argument,” are often used in disputation as a means to dismiss the opponent’s thesis, attacking the person of the opponent rather than the thesis that she professes or the evidence that she presents. In the case under consideration, the direct opponent of Bh\text{\text}viveka are the proponents of the M\text{\text} (\text{\text}, but the target of the accusation are the gods that they recognize as teachers and leaders. By undermining the truth of these gods’ teaching, one can expect that the implicit thesis of the direct opponent, namely, that these gods’ teaching should be followed, is refuted as well.

Ad hominem arguments are generally classified as argumentative fallacies. They are rhetorically advantageous for sidetracking the opponent, leading him to a self-justification process that has nothing to do with the matter at hand. They are especially effective in influencing the subjective perception that the audience has of the speaker, for they cast doubt on the credibility of the opponent. They often do so by way of putting doubt on the opponent’s respectability rather than on his intellectual capacities — accusations or insinuation thus frequently bear on conducts that deviate from social or legal norms of morality (sexual practices, consumption of drugs, alcohol abuse, etc.). From a logical point of view, however, the assumption that a person’s statements are incorrect on account of this person’s actions, immoral as they may be, is unfounded. Still, in informal logic, criticism of the person is deemed appropriate if the accusation directed to the person establishes either a biased disposition towards the issue at

---

100 The Vi\text{\text}upur\text{\text}a (2,6.29) mentions for instance that sleeping during the day may lead religious students to fall into hell. But this unhappy fate is not linked so much with sleep itself than with its side-effects, namely, the emission of seminal fluid amounting to an involuntary breach of their vows of chastity. Parallel passages are found in the Garu\text{\text}pur\text{\text}a, Brahmapur\text{\text}a and V\text{\text}ypur\text{\text}a (I thank Marc Tiefenauer for this information).

101 For instance, Śāmkara states in the Brahmaśāṭrabhāṣya that the nature of Brahman is experienced in deep sleep (Potter 1998: 173).

102 See MHK 9.73 (rāgadvesādiśavalam kim tār\text{\text}caritam hareḥ / anāyacaritaś caivaṃ katham sa purusottamaḥ //) and TJ D295a3–4.

hand, linked with a possible willingness to deceive, or the lack of capacity to make a correct statement regarding the subject matter of the discussion.\footnote{Groarke (2008) summarizes: “One may, for example, reasonably cast doubt on an arguer’s reasoning by pointing out that the arguer lacks the requisite knowledge to make appropriate judgments in the area in question, or by pointing out that the arguer has a vested interest.”}

In the religious context, the question is whether the accusation of immoral conduct is pertinent insofar as the subject matter touches precisely morality itself, a vast issue that the present paper does not intend to unravel. In the Indian context, one must take into consideration the important concept of “person of authority” (āpta) attached to persons who promulgate or reveal religious truths, who are characterized by a number of qualities, notably moral ones.\footnote{On this topic, see Eltschinger 2007: 75ff. Eltschinger points out three aspects of the āpta’s qualities shared across philosophico-religious schools: knowledge, moral purity, compassion (ibid. p. 79).}

One can mention for instance\footnote{For more references, see Eltschinger 2007: 76 n. 28.} the five epithets with which Dignāga qualifies the Buddha in the salutatory verse (māṅgalalokā) of the Pramāṇaśaṅkucaya, and Dharmakīrti’s commentary thereon in the Pramāṇasiddhi-chapter of the Pramāṇavārttika\textsuperscript{107}, the characteristics of the āpta described by Vātsyāyana in the Nyāyabhāṣya\textsuperscript{108}, or the discussion on the “good man” (sad, sādhū) in Kumāraśīla’s Tantravārttika.\textsuperscript{109} Personal authority established on this basis generally serves as a ground to derive scriptural authority.\textsuperscript{110} In such a model, ad hominem argumentation is thus especially
pertinent, and one that targets morality is bound to be effective. Bhāviveka’s argument goes yet one step further, for it suggests that the relation between the nature of the teacher and the rejection of the teaching can be established logically. His resort to an ad personam accusation against the gods, who both profess and personify the Vedic teaching, thus aims at a conclusion that necessarily follows from the evidence.

5.1.2.2 Logical grounding

Commenting on MHK 9.59, Bhāviveka sets out to present the logical grounding of the argument:

What is said by one who is endowed with undefiled wisdom precisely on account of being devoid of afflictions, this corresponds to reality. But the words of those who indulge in desires endowed with afflictions, having fallen under the influence of negative forces, those words do not correspond to reality. Since it is the deed of someone endowed with afflictions, it is only correct, not incorrect, that the triple view should be discarded.

Let us unpack this explanation, which introduces the central element of Bhāviveka’s argument: the notion of wisdom. Bhāviveka’s essential claim is that (i) afflictions prevent wisdom, in other words, correct apprehension of reality, and (ii) a correct teaching requires that the teacher has a correct understanding of what he teaches.

i. Afflictions and wisdom

The presence of afflictions is repeatedly presented as a ground for rejecting someone’s wisdom. For instance in MHK 9.63, Brahmā and Śiva’s passion for Tilottama is invoked as a ground to refute that their mind is one that sees the truth (tattvārthaśānti buddhiḥ); in the same way, Viṣṇu’s thefts and murders mentioned in MKH 9.66 and 9.67 contradict the notion that he is one who sees the truth (dyṣṭatattva). The relation between the lack of wisdom and the converse relation between the lack of wisdom and the presence of afflictions (or corrupt conduct) is mainly

112 TJ D291a3–5; P329a3–5 nyon mongs pa dang bral ba nyād kyis sgrīb pa (P la) med pa’i ye shes dang ldan pa’i gsum ni don ji lla ba (P ji lla) bzhin yin par ‘gyur gyi // gang yang gdon gyis zin pa bzhin du nyon mongs pa dang bcs pa’i ’dod pa’i rjes su zhugs pa ruams kyi tshig gi don ji lla ba bzhin ma yin te / nyon mongs pa (P om. pa) dang bcas pas byas pa yin pa’i phyir lla ba gsum po nyoñi ni spang bar rigs pa kho na yin gyi mi rigs pa ma yin no /.
described in terms of positive and negative concomitance. For instance in TJ’s commentary on MHK 9.65:

For those who are not stupid, there do not arise lust, hate, and mental confusion.¹¹³

Or when commenting on MHK 9.66 that describes Viṣṇu’s corrupt conduct:

On the one hand, due to such manners he is not one who understands the ultimate, and on the other hand if he did see the ultimate, it wouldn’t be correct that he is endowed with such a behavior.¹¹⁴

The relation that afflictions might have with wisdom is transparent in the case of the affliction of mental confusion. It seems undisputable indeed that ignorance is incompatible with wisdom. But what about lust and hate? The only hint of an answer that Bhāviveka provides is when commenting on MHK 9.87; there he mentions that afflictions are “obfuscators” or “defilements” (sgrīb par byed pa, āvarana) of wisdom,¹¹⁵ which is reminding of the discussion in the Abhidharmakoṣa about primary and secondary afflictions that are obstacles (nīvaraṇa) to understanding the truth,¹¹⁶ and more generally of the notion of klesāvaraṇa. This matches the contrapositive formula that we have seen in the commentary on MHK 9.59, namely “endowed with undefiled wisdom precisely on account of being devoid of afflictions.”

This claim must be put into relation with the notion of wisdom that is considered here. In MHK 9.87 cum TJ, wisdom is explained in terms of knowledge of the cause of samsāra (i.e., the afflictions) and of liberation (i.e. the cutting of the afflictions).¹¹⁷ But Bhāviveka’s understanding of wisdom also involves the idea that wisdom is the result of a change in the mental continuum. In MHK 9.61 Bhāviveka characterizes a “learned man” by his capacity to burn away the afflictions (klesādahana); this is, comments TJ, precisely what it means to have wisdom: not to collect afflictions, or if one has collected them, to have pacified them.¹¹⁸ We can note in addition that it is not wisdom, and in particular the understanding that afflictions are the cause of samsāra, that prompts the wise to pacify his afflictions; on the contrary, the pacifying of afflictions is presented as a condition for wisdom. This excludes the option that a teacher would have wisdom, and thus satisfy the conditions for providing a correct teaching, and still would be demonstrating a corrupt behavior.
Afflictions and corrupt conduct are often used interchangeably by Bhāviveka in this context. As mentioned in the previous section, the relation between the two is conceived as a causal one. This is made clear in MHK 9.61 cum TJ: a learned man — one who is endowed with wisdom — does not commit evil acts (pāpa) because he lacks the cause of the latter, namely the three afflictions.119

If it could be accepted that some evil acts result from the presence of afflictions, it is questionable to identify all sins — killing being a prototypic example — as the effects of afflictions. In MHK 9.68, an opponent argues that killing, in some cases, is not even a sin; for instance, the gods’ killing of their enemies is in fact prompted by their desire to protect the dharma (dharmagupti). This suggests that killing might have another cause than the affliction of hatred. Bhāviveka’s answer consists in showing that the gods cannot in fact qualify as “protectors of the dharma.” In MHK 9.69, he argues that the gods’ alleged “desire to protect the dharma” would be in conflict with other corrupt actions that they perform, such as theft, adultery, deceit, etc., so many actions that cannot be explained to be for the benefit of the dharma. In MHK 9.68, he characterizes the “protection of the dharma” in terms of either realizing the true dharma oneself or teaching it to others. The first option is denied to the three gods precisely by the argument that refutes that there can be correct understanding, or wisdom, when afflictions are present. As TJ ad MHK 9.87 concludes: “Therefore, the claim that ‘These [gods] know the truth’ is to be negated: Brahmā, Viṣṇu, and Śiva do not understand the ultimate, because one observes that their behavior is lustful, etc. (rāgādisamudācāra), like gangs of robbers and hunters, etc.”120

The second option, as we will see below (ii.), is refuted as well for it relies on the first.

In summary, afflictions both cause corrupt behaviors and prevent wisdom. In view of the relationship between these terms, one could thus characterize the logical model that Bhāviveka is suggesting along the lines of these logical reasons that Dharmakirti assimilates to logical reasons qua effect insofar the logical reason and the probandum, although they are not properly speaking cause and effect, both result from the same sufficient complex of causes.121

In the case under consideration, since corrupt behavior and defiled wisdom are the result of the same sufficient complex of causes — the presence of afflictions — one can legitimately infer the second from the observation of the first.

---

119 See MHK 9.61cd: nātāḥ prakurute pāpaṁ jñānt tadāḥ taddhetvasambhavati / and TJ D292a4–5; P330a7–8: shes pa dang ldan pa rnam m ni srog gcod pa la sog s pa’i sdig pa’i las ni byed de l’‘dod chags dang / zhe sdom dang / gti mug ces (P’zhes) bya ba’i sdig pa’i rgyu rnam m med pa’i phyir ro // ‘dod chags sam / zhe sdom ngam / gti mug gis ni sdig pa’i las byed par gyur te...

121 See Iwata 1991. This case is otherwise illustrated by the inference of taste from shape, or of rain from the fidgeting of the ants. Note that Bhāviveka himself does not attempt to characterize his argument as a specific type of inference relying on a specific logical reason.
ii. Wisdom and teaching

The second part of Bhāviveka’s reasoning relies on the premise that to be correct a teaching must be the verbal expression of a correct understanding, thereby excluding an ignorant teacher professing what are merely “lucky guesses” or parroting someone else’s words without personal understanding. Lack of correct understanding prevents one from giving a true teaching, and therefore to lead others in a meaningful way. In MHK 9.93, an ignorant teacher is thus compared to a guide attempting to lead others while having himself fallen into a precipice. On the contrary, someone who knows the truth is able to guide others. Teaching on liberation, thus, can only come from someone who is liberated, and whose behavior testifies to their liberated state. In brief, true religious teachers necessarily practice what they preach.

From i. and ii., there is only one conclusion to be reached: the gods’ teaching should be rejected, as should be the teaching of any putative teacher who does not see the truth, for these cannot lead one to liberation.

5.2 The “slumber argument” in lHo pa’s narrative of the sKyid grong debate

Let us go back to sKyid grong. As seen in our analysis of Sa pan’s statement, the notion of “slumber” appears twice: first associated with mental confusion in the short statement [3] “Brahmā slumbers because of great mental confusion,” then in the third pāda of the verse from the *Suprāta-prabhāṣṭotra* [4], where it stands in contrast to being awake.

The two statements certainly support each other rhetorically. The force of the argument from the hymn is one of contrast and depreciation: contrast, as it opposes Brahmā and the Buddha in terms of slumber vs. awakened state; depreciation, because this contrast presupposes a positive pole — being awake — and a negative one — slumbering. Statement [3] provides a justification for this polarization by associating slumber with the affliction of great mental confusion (*gti mug chen, *mahāmoha*). Reciprocally, the hymn provides support to the argument in [3] by implying that Brahmā’s slumber is a fact that is well-established in the opponent’s Scriptures from which the author of the hymn draws his descriptions.

The specificity of the association of “slumber” with “mental confusion” strongly suggests that the author of the argument is relying on a precedent for this type of argumentation. MHK/TJ would then appear as a likely precedent.

122 The same conclusion is pointed out in TJ D293b1 (P331b7–8) ad MHK 9.65: *de’i phuyin na re zhi g de nyid la yang de kho na nyid mthong ba yod pa ma yin na yang de’i mge brstan pa’i lam nas’ jug pa la lla gro la yod par ji ltar ‘gyur te mi ‘gyur ro/.* See in parallel the passage cited in n. 115, and TJ D298b6 (P338b1) and MHK 9.88: *de dog ni bdag nyid kyang phyin ci log tu sgrub pa la gnas pa yin na (P om. na) ji ltar gzhon dag yang dag pa’i sgrub pa la ’god (P dgod) par nus par ’gyur/.*

123 His lack of afflictions, one could add, would guarantee that he has no motivation for lying or deceiving his audience. Bhāviveka, who concentrates on the case of the one who does not know the truth, does not address the question whether one who knows the truth would not, due to the absence of afflictions, also lack the motivation to teach at all. For a recent treatment of Dharmakirti’s discussion of the question whether the Buddha, if devoid of desires, could still have the motivation to teach, see Pecchia 2008.
candidate. If one presumes that the association of slumber and mental confusion in [3] is indeed intended as in Bhāviveka’s argument against the Mīmāṃśā, Sa pañ’s statement goes beyond the ad personam contrastive and depreciative effect, as it now implies a logical argumentative structure leading to its conclusion — the rejection of the opponent’s teaching — by way of an inferential process.

One can wonder, in such a case, why the enunciator of the argument chose to concentrate on “slumber,” which is, after all, not very spectacular in terms of corrupt behavior. Also, as discussed in the preceding section, slumber is one of the illustrations of corrupt conducts whose connection with the intended corresponding affliction, mental confusion, is disputable. Aside from this difficulty, one can see two advantages for this choice. First, mental confusion is the affliction whose connection with the absence of correct understanding is the most readily acceptable. Second, in combination with the "Suprātāprabhātastotra, the argument from slumber gains both support for its premise (the fact that Brahmā sleeps) and rhetorical efficacy as its intended logical impact is combined with an informal type of argumentation.

The hypothesis that the author of the argument is indeed intending a MHK/TJ-like line of argumentation has further implications for the way this statement stands in regard to the opponent’s “motivation statement” (I in section 3) and initial statement (4.1).

For one thing, the claim that Brahmā is guilty of some type of corrupt behavior works as a tu quoque against the claim that Tibetan Buddhists adopt depraved conduct. It is true that slumber and sexual practices do not exactly generate the same shock-effect when discussing morality, but for someone familiar with the line of argumentation used by Bhāviveka, the mention of slumber would probably recall the associated accusations pertaining to lust and hate. If this is assumed, it is not only the authority of Brahmā and of the Vedic teaching that is discarded by this argument; Brahmā’s purity, and thereby indirectly the purity of the Brahmins of his descent, also becomes an implicit target.

As analyzed in section 4.2, the slumber argument is only one part of Sa pañ’s argument. Parts [1] and [2], as I have argued, can also be read as informal arguments that address respectively the question of purity and that of the respect due to the Buddha. Taken as a whole, these statements constitute a multifaceted attack on Brahmā and a defense of the respect due to the Buddha. The statements representative of the slumber argument can be taken without presupposing a formal structure, or on the contrary by supposing an elaborate logical background. The argument attributed to Sa pañ may actually have served precisely such a double role of confronting non-Buddhist masters with a formal logical argument, while providing also an effective way to address an audience of non-specialists, maybe including some arrogant passing-by Indian Brahmins failing to pay respect to the renowned Jo bo of sKyid grong.

124 The question whether this text itself could have been used as a source is discussed in section 6.2. So far I have not been able to find a similar argument in another Indian or Tibetan source predating lHo pa’s narrative.
125 The depraved aspect of promiscuity with women touches in particular practitioners who have taken monastic vows.
5.3 Theory and practice

As discussed above, one can distinguish in Sa paăn’s argument layers of formal and informal arguments. What needs to be investigated in view of our initial questioning is whether the form of these statements matches a known type of proof-statement. In particular, can the steps of the narrative that we have detailed in section 3 be mapped onto Sa paăn’s prescriptions concerning the correct unfolding of a debate and the presentation of a correct argument?

The model of debate that Sa paăn presupposes in the mkhas ’jug relied on the one hand on Dharmakīrti’s discussion of “inference-for-others” in the Pramāṇavārttika and Pramāṇaviniścaya and on the other on his discussion of points of defeats in the Vādanyāya. According to Sa paăn, a proper philosophical debate also requires two debaters who affirm tenets worthy of examination and disagree with each other. One of them, the proponent, presents a proof-statement that enunciates a triply characterized reason, while the other, the respondent, attempts to refute him by pointing out faults pertaining to the probans. According to Sa paăn, Dharmakīrti’s texts would support the idea of an additional step between the presentation of the logical reason by the proponent and the respondent’s refutation, namely, the proponent must “remove the thorns,” that is, he must show that the three characteristics are indeed established.

In the narrative of the dialogue between Sa paăn and his opponent, it is possible to map their respective statements with a pūrvapakṣa/uttarapakṣa-model. Namely, the non-Buddhists’ initial claim constitutes their pūrvapakṣa (as discussed in 3.1, a threefold claim), which Sa paăn attempts to refute by means of an argument (uttarapakṣa).

What is the form of a correct proof-statement according to Sa paăn? Sa paăn’s opinion is that the proponent should make explicit the triply characterized reason by expressing its pervasion by the property to be proven (“whatever is R is Q, like E”) and the fact that it qualifies the subject (“S is indeed qualified by R”). Following Dharmakīrti, Sa paăn denies that the statement of the thesis (or conclusion of the argument) should be part of the proof. Indeed, as it does not contribute as a means of proof, it would count as a superfluous expression and make the proof statement fallacious. While any supplement to the expression of the pervasion and the pakṣadharmatā (the qualification of the subject by the logical reason) is ruled out, Sa paăn concedes, on the other hand, that it is not always necessary to state both these members. Relying on a passage from Dharmakīrti’s Svavṛtti, Sa paăn defends the idea that when the opponent is “knowledgeable” or “learned”

---

126 Note that in this text Sa paăn only discusses problematic issues, without presenting the steps of debate in a systematic way. For a sketch of the later Sa skya pa system based on Śākyamchog ldam’s explanation, see Jackson 1987: 197–199.
129 PV 1.27 cum Svavṛtti PVSV 17.13–19.22 (translated in Steinkellner 2004: 238ff., where the verse is numbered k.29): “Surely in the example (the fact) is conveyed to (someone) who does not know (either of) these (two facts), (namely) that [the property to be proven] is [in reality nothing but] that (reason or its) cause. To those, on the other hand, who are already familiar with (the fact that that which is to be proven) is [in reality] this (reason) or (its) cause, (i.e.,) For to those who know (this), only the mere reason needs to be mentioned. The purpose for which an example is stated, that is (already) achieved. Thus, of what avail is its formulation then?”
(mkhas pa), the statement of the pervasion is not required.\textsuperscript{130} For instance, to prove that sound is impermanent to a knowledgeable opponent, one who is well aware that whatever is produced is impermanent, it would suffice to state: “Sound is produced.”

Considered in this light, statement [3] can be interpreted as the presentation of a logical reason — “slumber” — to a knowledgeable opponent. The proponent, in this case, only expresses the paksadharmaṭā, namely “Brahmā sleeps,” and presumes that the opponent does not need to be reminded of the pervasion, namely, that slumber entails that the teaching of such a teacher ought to be rejected. This entailment, as discussed in section 5.1, can be made to rely on the idea that the affliction of mental confusion — which is hinted at since the full statement reads “Brahmā sleeps because of great mental confusion” — is both the cause of slumber and the sufficient cause for an incorrect understanding of reality, and hence the incapacity to give a teaching relevant to liberation. In short, it is possible to interpret Sa paṅ’s statement as a proof-statement following rules he himself prescribes. But to do so, a background similar to the one found in MHK/T is to be presupposed.

If “Brahmā sleeps” is a proof-statement (in the short version that is appropriate for knowledgeable opponents), what is the role of the citation from the *Supratāprabhāśastotra*? This citation may be interpreted as an attempt to remove the thorns pertaining to the paksadharmaṭā, that is, here, to counter the eventual objection that Brahmā does not sleep. The passage cited by Sa paṅ is not actually a scriptural passage taken from the opponents’ scripture. It refers, however, to a feature that is indeed associated with Brahmā in the opponents’ literary corpus (Brahmā sleeps inbetween the dissolution and the re-creation of the world), and would thus play a role equivalent to a citation from a Brahmanical source.

This brings up, however, another issue: even if the opponent recognizes the source as genuine (i.e., as repeating elements from his own scriptures), scriptures are not accepted in Buddhist logic as a valid means of cognition. They can be invoked, however, when it comes to suprasensorial matters. This appears to be case here, for how could one ascertain the state of affairs “Brahmā sleeps” if it was not for the scriptures giving us this information? One could wonder, in this case, if the logical reason of the argument would not in the first place qualify as an appeal to scriptures, namely: “your scriptures state that Brahmā sleeps.” When commenting on *mKhas ’jug III.37ff.*, Sa paṅ qualifies debate on the scriptural teachings in a way that would indeed match the stakes of the sKyid grong disputation:

When debating on the scriptural teachings, it is proper to inquire and it is not an occasion for laughter if one asks questions ... about [completely] hidden phenomena not taught in the Sūtras or Tantras concerning places of refuge other than the Three Jewels, such as Īśvara, or concerning [theories] different from the [four] “seals” which are the marks of the doctrine for theory, such as a theory of a

\textsuperscript{130} See Rigs gter XI.31d (mkhas pa la ni gtan tshigs nyid) cum rang ’grel. Sa paṅ’s position on this theme and the difference with that of his predecessors are discussed in Hugon forthcoming.
self or person, or concerning modes of conduct different from the Middle Way, such as physical pleasures and mortifications.\textsuperscript{131}

If one takes for granted that Sa paṅ and his opponents are thus discussing “completely inaccessible” matters — such as Brahmā as a place of refuge — what kind of argument is considered proper? Sa paṅ prescribes two kinds of answers when debating on scriptures: “One should refute that [argument] by means of [quotations from] scripture or by means of reasoning based on scripture.”\textsuperscript{132} The example Sa paṅ deals with in the mKhas 'jug (III.20ff.) is the famous Vedic claim that “who performs ablutions on the shore of the Ganges will not be born again.” Insofar as followers of the Veda agree with the Buddhists on the cause of Cyclic existence — actions produced from desire, hatred and confusion — and its cessation — freedom from these evils — such a passage reveals an internal contradiction because the washing of the body is unrelated to the mental factors that the three poisons imply. Citing this passage provides a suitable argument in this context.

In the case of the sKyid grong debate, the citation from the hymn, which states that “Brahmā sleeps,” is not directly revealing of an internal contradiction. However, once the link between afflictions and the incapacity of seeing the truth is assumed (and in the case of the affliction of mental confusion, the link is obvious), the opponent is placed in the self-defeating position that he accepts scriptures that themselves present their teacher as showing signs that he is unworthy of being a teacher.

We have thus so far identified two ways to make sense of the argument in lHo pa’s narrative: (i) it consists in the statement of the paksadharmatā of the logical reason “slumber” for the subject “Brahmā,” a paksadharmatā which is, if not formally established, presumed to be accepted by the opponent on account of his own scriptures; (ii) it consists in an appeal to scriptures whose contents include the claim that “Brahmā sleeps,” to demonstrate the contradiction, for the opponent, to accept both these scriptures and Brahmā as a teacher. Both these interpretations presuppose an argument addressed at a knowledgeable opponent, one who is aware of the causal relation between the three types of afflictions and corresponding behaviors, and of the way afflictions prevent the understanding of the truth.

If the opponent’s pūrva-pākṣa is summarized as “Brahmā should be followed as a teacher,” the formal aspect of the slumber argument provides an adequate reply, as the inference leads to the conclusion that Brahmā is not worth as a teacher, and that his teaching should hence be rejected. As to the other aspects of the opponent’s claim, in particular the claim of purity, we have seen in 5.2 that it is indirectly addressed by the association, in the original argument, of slumber with the other illustrations of vicious conduct.

6. Conclusion – from narrative to facts

We can, at this point, address the question whether lHo pa’s narrative provides us with anything like a factual account, be it of an actual debate between Sa paṅ and a non-Buddhist in sKyid grong, or a plausible picture of

\textsuperscript{131} Transl. in Jackson 1987: 336.

\textsuperscript{132} mKhas 'jug III.30, Jackson 1987: 338.
what a debate might have looked like at that time. One question that is obviously linked with this one, although secondary in view of the purpose of the present enquiry, is whether the sKyid grong debate is a historical event. Its occurrence is taken for granted in the Tibetan tradition and, so far I know, has not been questioned by modern scholars who, at most, argue on its date. The reason I pose the question is not that there is strong evidence that the sKyid grong debate did not take place. There are, on the other hand, good reasons that can be invoked for the insertion of such an event in Sa pan’s biography even if it did not take place. I suggest, therefore, that rather than readily accept any of the related accounts at face value, one should examine carefully what stands in favor of its actual occurrence.

6.1 Did the sKyid grong debate ever take place?

Why would biographers recount such an event if it did not take place? One has to take into account the fact that the earliest sources that mention the event belong to the genre of “rnam thar.” Although loosely translated as “biography” or “biographical account,” Tibetan rnam thar are often better described, as the Tibetan term connotes, as accounts of an exemplary life leading to liberation. Sa pan was a renowned logician, and also a theoretician who ascribed an important place to debating among the competences expected of a learned scholar. The mention of a debate to illustrate Sa pan’s embodiment of the very qualities he put forward in his program therefore does not come as a surprise. One can even note that several biographers (for instance Zhang rgyal ba dpal, Bla ma dam pa, Go rams pa, Bo dong, etc.) precisely organize their description of Sa pan’s deeds and qualities according to the triad of exposition, composition and debate, the three skills of the wise according to the mKhas ‘jug.

Why would Sa pan be made to debate with a tirthika? Two reasons could be invoked: first, being exhaustive. For instance, Zhang rgyal ba dpal has Sa pan vanquishing in debate both Buddhists — among whom Tibetans and non-Tibetans — and non-Buddhists. Another reason is Sa pan’s specific dedication to refute tirthika views, principally in his epistemological work, the Rigs gter. Additionally, Sa pan’s knowledge of Indian languages and of non-Buddhist treatises are also put to the fore in Sa pan’s biographies – a live debate against a tirthika provides a perfect event combining these elements.133

Why, then, locate such a debate in sKyid grong? One can find, as well, several good reasons to do so. First, it is a plausible place for the encounter. Sa pan’s presence in the region, on several occasions, is attested by sources that describe the people he met and the teachings he gave at these times. The location of sKyid grong and the function of this township as a market-place on a trade-road coming from the Kathmandu valley make it a likely place for Tibetans to meet tirthikas of Nepalese or Indian origin. There are, additionally, layers of symbolism that are associated with sKyid grong as a frontier location, both in religious and lay history, that make it an especially

133 Śākyā mchog Idan mentions in his biographical account that Sa pan debated with his opponents in Sanskrit. Cf. Chos ’khor rnam gzhag 5b4: sam skrī ta’i skad kyis de dang brtsad pa na.
suitable place for a confrontation with an opponent who is neither Tibetan nor Buddhist.\textsuperscript{134}

One can add to these considerations that several accounts of the debate, principally those following the second type of scenario, include a number of events that a modern reader is bound to classify as poetic elaboration. But even a down-to-earth account of the event as in lHo pa’s narrative contains elements that bear too much symbolic significance to be entirely trusted at first sight. For instance, the number “six” given for Sa pa’s opponents immediately brings to mind the famous six non-Buddhist teachers (whose views are presented for instance in the \textit{Samaññaphalasutta}) whom the Buddha defeated in Śrāvastī, as recounted in the \textit{Prātīhāryasūtra} of the \textit{Divyāvadāna}. It is also curious that the name of the chief disputant, “Phrog byed dga’ ba/bo, is not given in a phonetic adaptation of the original Indian name, whereas other Indian names usually are (for instance the names of the Indian pandīts Sa pa studied with). This leaves the impression of a customized name, if not a customized opponent.

The mention of a debate involving Sa pa in the latter’s biography is thus something that is expected by the reader, and is likely to be inserted by a biographer even if the latter has neither witnessed the event himself nor heard about it from a reliable source. One cannot say that the author commits thereby an intended historical lie; rather, he is making pious additions of facts that are so likely to have happened that they can just as well be considered to have happened.

What, then, speaks in favor of the debate as a historical fact? The best argument, it appears, is that of the proximity of the redaction of the earliest biographies that mention the event to its presumed date of occurrence, and the proximity of their authors to Sa pa. There is, however, no indubitable indication that Sa pa would have read and approved their account. As for local sources that mention Sa pa’s stay in sKyid grong and the debate, their late date of composition (Vitali mentions seventeenth-century works) raises the question whether their authors rely on a local tradition or mix several sources, among which biographical accounts of Sa pa of external origin. The “Verses for the subduing of the non-Buddhist teachers” would be a pertinent support provided that the part in prose that follows the verses, which identifies the occasion of their composition, was indeed written by Sa pa. As for the clotted hairs hanging on a pillar in Sa skya, that have been claimed to be seen from the early fifteenth to the twentieth century, they can hardly be taken as material evidence for the sKyid grong debate, although the presence of such an item in Sa skya is certainly telling about the importance of this episode associated with Sa pa for the Sa skya pa collective memory.

\textsuperscript{134} I intend to deal in a forthcoming study with this aspect of the location of the debate, which becomes especially relevant when one considers narratives that follow the second type of scenario. One can mention, among the points that can be taken into consideration, that the temple of Byams sprin in sKyid grong belongs to the border temples whose construction is attributed to Srong btsan sgam po; the region, more precisely mTshams (lit. “border”), north of sKyid grong, was also declared a border-place by Padmasambhava; further, the invasion of Mang yul gung thang by the Ya rtse kingdom took place in the same period, leading to the death of the king of Mang yul in mTshams.
As I will argue in the next section, the position one adopts on the issue of the historicity of the debate does not prevent one from drawing some conclusions as to debating practices based on lHo pa’s narrative.

6.2 What can one learn from lHo pa’s narrative?

There are, I would suggest, three main options to take into consideration to evaluate lHo pa’s narrative:

a. A debate involving Sa pa and a non-Buddhist did take place, in sKyid grong or at another location. lHo pa may have witnessed it himself or have heard about it from an eye-witness or a secondary source.

b. lHo pa is not aware of any contemporaneous debate of Tibetan scholars against non-Buddhists.

c. A less likely alternative is that no such debate involving Sa pa took place, but lHo pa witnessed or heard about some debate involving another Tibetan scholar and a non-Buddhist teacher.\(^{135}\)

Although we are not in the position to determine which of these options is the correct one, there is, I suggest, one fact that can help us answering our initial questions — how debates were conducted in these days and whether lHo pa’s account gives us a plausible account of such practices. This fact is that lHo pa was both Sa pa’s disciple and an expert in epistemology (see section 3). He was thus certainly aware of the theoretical aspect of argumentation rules as discussed in epistemological works, and in particular Sa pa’s model in the *Rigs gter* and *mKhas jug*. One can also expect that he had some experience of what debates actually were like in the practice.

In the first case of possibility (a), the basis for lHo pa’s narrative would be an actual event. As lHo pa was well-versed in logic, he was in a position to understand the unfolding of the argument conveyed by the various statements of the debaters.\(^{136}\) That lHo pa was recounting a real event does not preclude that the author arranged the facts when putting it in writing. No account is ever purely objective and exhaustive. Abbreviation and paraphrase must be presupposed, reformulation as well, for there was little chance that the non-Buddhist opponent would have been conversant in Tibetan. In other words, even in lHo pa’s account is based on a real event, we are still dealing with a narrative. The rhetoric of debate narrative must thus be taken into consideration when evaluating the status of the various statements. For instance, the opponent’s “statement of intention” is more likely an addition of the author than a reflection of something that was said before or during the debate. It is also conceivable that the alleged conversion of the opponent following his defeat is simply a literary convention.

In the case of figure (b), as lHo pa would be attributing an argument to Sa pa in order to illustrate his skills in debate, one can expect that he would

---

\(^{135}\) This option is less likely in view of the apparent rarity of debates between Tibetan Buddhists and Indian non-Buddhists; see n. 8. The inclusion of such an episode in Sa pa’s biography in cases (b) or (c) can be explained in view of the reasons discussed in 6.1.

\(^{136}\) I come back below to the question of the plausibility of lHo pa’s familiarity with MHK/TJ’s line of argumentation.
take special care to put into the mouth of his teacher an argument that is not only pertinent, but also formally valid. In brief, he would construct or recycle (in case c) an argument suitable to be attributed to the renowned Sa pa, and that would have been recognized as a clever logical argument against non-Buddhists by contemporaneous readers familiar with debates. One would, in this case, presume that LHo pa addresses a readership who is familiar with the argument from MHK/TJ cryptically hinted at and would possibly recognize the citation of the hymn, and that the form of the reported argument matches quite precisely the prescriptions of theoretical treatises. The form of the argument found in LHo pa’s narrative — a one-member proof-statement — shows that even if LHo pa constructed the argument, he did not settle for a stereotyped version of a proof-statement.

Whichever of the above three options prevails, we can draw the conclusion that LHo pa’s narrative is representative of debate argumentation as it did or could have taken place in these days, but that his narrative is not a mirror-account of actual events. An unsettled question in both cases is that of the familiarity LHo pa might have had with the line of argumentation developed in MHK/TJ and thereby recognized (in case a) or put forward (in case b) the mention of slumber as a pertinent and logically grounded argument. That Sa pa might have drawn from this source is plausible. Sa pa certainly knew MHK and TJ, which had been available in Tibet since the eleventh century (they were translated on the request of rNgog legs pa’i shes rab by Atiša and the translator Nag tsho). They are not mentioned by Sa pa’s biographers among the texts enumerated when accounting for his studies, but Sa pa refers to TJ for instance in the mkhas ’jug when enumerating the various kinds of non-Buddhist views.

The “slumber argument” in the sKyid grong debate is composed of the association of slumber with mental confusion, presumably based on a MHK/TJ-like background, in combination with the contrastive claim of the *Suprātapaṭṭasūtra*. It remains a question whether one is dealing with an original combination — by Sa pa, by LHo pa, or by another scholar — or if Sa pa or LHo pa is drawing from a pool of well-known ready-made arguments against non-Buddhist opponents that the learned audience, respectively readership, would be expected to recognize. In such a case, one could expect the slumber argument to surface in other Tibetan works when it comes to refuting non-Buddhists. I have not as yet identified any such instance. The only possible echo to the MHK/TJ argumentation that I have identified...

---

137 The mention, in LHo pa’s narrative, of subsequent steps in the debate [5] is not in itself a decisive element. It may admittedly indicate that LHo pa himself considered that Sa pa’s explicit statement was not the best way to illustrate Sa pa’s capacity as a logician, and that this addition was meant to secure Sa pa’s status of renowned logician by mentioning a follow-up, involving logical arguments, to the first exchange. But on the other hand, it is quite plausible that the debate did not stop at this first exchange of views and that the discussion went further, maybe in a less remarkable way; i.e., the first argument was held as most representative of a logician’s prowess, which then did not need further exemplification. Zhu chen mentions that the opponent is defeated by “logic and scriptures” (lDe mig 11b4: lung rigs kyis tshar bcad), which is not in itself indicative of his perceiving the first argument as “scriptural” insofar as the formula pairing the two is a locus classicus. Several biographers only mention logic.

138 They also do not appear in the list of Madhyamaka works studied by earlier Sa skya pas. See Jackson 1985.

139 mkhas ’jug 11.43. See Jackson 1987: 344.
found so far (apart from lHo pa’s narrative and other narratives adopting the same scenario) occurs in annotations to the biography of Sa pa composed in 1579 by Rin spungs pa Ngag dbang ’jigs med grags pa, although not in the chapter where this author deals with the debate of sKyid grong. In the fourth chapter (pp. 179–190) that deals with Sa pa’s studies with Indian and Tibetan masters, Rin spungs pa mentions the three gods Brahmā, Viṣṇu and Śiva. Anonymous annotations added to the versified text associate each god with one of the “three poisons” (dug gsum, the expression occurs in the following verse) or basic afflictions: Brahmā with mental confusion, Viṣṇu with hatred, and Śiva with lust. No mention is made there of behaviors associated with these afflictions, but these annotations strongly suggest knowledge of the passage of MHK/TJ that we discussed.

As for the citation from the *Suprātāprabhāastrotrota*, Bla ma dam pa, writing a century after lHo pa (his work dates from 1344), identifies it by name; so does Bo dong (who obviously bases himself on Bla ma dam pa). But in sPos khang pa’s account (dating from 1427), although the author mainly repeats the elements of lHo pa’s version (or of a like version), his rephrasing of Sa pa’s statement suggests that he did not recognize it as a citation from the *Suprātāprabhāastrotrota*. sPos khang pa does not, either, reproduce the logical articulation between the notion of “slumber” and that of “mental confusion.”

What can we learn from lHo pa’s narrative about the practice of debate in Tibet? In spite of lHo pa’s down-to-earth approach, there is not much that we can learn from his text pertaining to the practical aspects of a debate in the broad sense of the term. lHo pa’s narrative hints at the possibility that one party, that of the non-Buddhists, is seated at the beginning of the debate (see section 3, II). It is explicit about the consequence of defeat, namely, the conversion of the opponent, but, as indicated above, such an outcome may reflect the rhetoric of debate narratives rather than what actually transpired.

In his study of the third chapter of the mKhas jug, Jackson notes that if this treatise would appear at first sight to be a practical guide to debating, it actually deals with quite particular theoretical or technical points. The reason for this, Jackson suggests, is that “the basic steps of debating were apparently so well known that he considered them not to require a detailed separate exposition.” We might be facing a similar phenomenon when it comes to debate narratives: by the simple evocation of a “debate,” familiar images and situations would come to the mind of the readers, making the description of well-known practical details superfluous.

As far as the form of proof-statements is concerned, it is interesting that the argument (insofar one agrees to interpret it as a formal proof-statement)

---

140 Note that Rin spungs pa also has a version of the sKyid grong debate involving a slumber argument, which is stated as follows: *tshangs <pa de nyid kyi>-kyang rmongs <pa>-chen <po>-’khor ba yi // mngal gyi rgya las thar <par>-ma gyur <pa de ’phyir>-// gti mug mun pa’i dra ba che<en po>-// bcings nas mu<up>-<pa ste gnyid do song>-ba ma yin nam //- (*Jam dbyangs legs lam 104a5).  
141 *Jam dbyangs legs lam 90b3-4: bram ze’i slob dpon dpal ‘dzin sdes // phye ba’i ‘grel par bcas pa dang // <gti mug can>-tshangs dang <zhe sdang can>-khvb ‘jug <’od chags can>-nam mkha’i skra can <te dbang phyug>-gyi // rkang sen zla ris sphyi bor blangs pa’i mod // dug gsum rgya mthor ‘phyur ba byang grol nyid // thob byed nger len rgyu ru khas ’ched pa//.  
142 See n. 72. I take the dates of composition from Jackson 1987: 23.  
Clapping hands in sKyid grong?

constitutes an instance of a one-member proof-statement, a form that is acceptable in Sa pa’s system, but rejected by several other thirteenth-century authors. If lHo pa is reporting faithfully this aspect of the debate, this would indicate that such “short versions” of proof-statements were indeed used in debates and not a mere theoretical possibility. If he is customizing an argument, the fact that he chose a one-member proof statement rather than a two-member one might be indicative that this form was not exceptional.

If the present study may not have elicited any definitive answers to our questions pertaining to the details of debating processes — despite the allusion contained in the title of this paper, we still do not know whether debaters clapped hands when debating in sKyid grong — it did reveal an original argument that was deemed effective against Indian non-Buddhists, however rare their presence would have been in thirteenth-century Tibet.

A note on the history and future of the 'Wylie' system

Nathan W. Hill

The 'Wylie' system of Tibetan transliteration, although it has gained some currency in North America, has achieved nowhere near the universal employment which Wylie had envisioned for it (1959: 263). Many self-ascribed users of the Wylie system do not themselves consistently employ it. Wylie put forward two principles for his system: that it use no diacritics and that it employ no syllable internal capitalization. The second proposal has attracted subsequent practitioners less than the first. Wylie himself makes clear (1959: 267) that this criterion of capitalization is the only difference between his system and that used by René de Nebesky-Wojkowitz (1956: xv).

A number of logically possible systems could cohere with the principle of no diacritics. The specific decisions of Nebesky-Wojkowitz on several points are unfortunate. His system uses the letter 'h' in three completely different meanings, aspiration (th, ch), palatalization (sh and zh), and the glottal fricative (h). A more consistent system would write either 'nh' for the palatal nasal or 'sy' and 'zy' for the palatal fricatives. The inconsistent choices put forth by Nebesky-Wojkowitz and retained by Wylie show a provincial anglocentrism. A Portuguese reader would not object to 'nh' instead of 'ny'; a French or German would have no special reason to think the choice of 'sh' rather than 'sy' natural.

The capitalization which Wylie prefers is rendered impossible in the case of the 23rd letter of the Tibetan alphabet, by the bizarre practice of rendering this letter with an apostrophe. Perhaps for this reason in China a modified system is used where v- represents the 23rd letter and x- the final letter of the alphabet, which is left untransliterated in other systems. Wylie erroneously refers to the 23rd letter as 'a-chung'. This practice appears to originate in Das' grammar (1915: 11), where it is however used only for the small letter written below a ming-gzhi to indicate a long vowel in Sanskrit.

The major advantage which Wylie himself points to, that diacritics cause needless work and lead to needless mistakes, is in these more technologically advanced times simply no longer the case. Nearly all library catalogs employ the Library of Congress system; this system has the further advantage of being compatible with the traditional transliteration of Sanskrit. Since all students of Tibetan must consult libraries and read Sanskrit, using the Library of Congress system has advantages over the Wylie system.

Although Nebesky-Wojkowitz does not mention any antecedents to his system of transliteration, the responsibility for the diacriticless system of Tibetan transliteration, with anglocentric warts and all, rests not with Nebesky-Wojkowitz but rather Heinrich Laufer. In his 1900 inaugural
dissertation *Beträge zur Kenntnis der Tibetischen Medicin* Laufer employed a system which differs from that of Nebesky-Wojkowitz predictably only in the treatment of the 23rd letter. H. Laufer uses a small circle for Nebesky-Wojkowitz’ apostrophe (1900: 6). Heinrich Laufer does not however implement his own system immaculately, for example using -v- rather than -w- for the *wa-zur* on page 54.

His dissertation was Heinrich Laufer’s only contribution to Tibetan studies. His better known brother Berthold Laufer is in contrast one of the major figures in the history of our discipline. Berthold Laufer in his own works was content to use a system of Tibetan transcription laden with difficult diacritics. In his life cut short by suicide Berthold Laufer made major contributions to the study of Tibetan, Japanese, Chinese, Mongolian, and anthropology, in a volume and quality that is hard to fathom. It appears that even at his time diacritics were not so cumbersomeness or time-consuming as Wylie feared.

In the land of its greatest success the Laufer-Nebesky-Wojkowitz-Wylie system is steadily losing ground to systems of transcription which claim to be ‘phonetic’. Little notice seems to have been taken of the fact that Khri Srong brtsan is a perfectly accurate way of reflecting the pronunciation of the name of the emperor frequently called Songtsen Gampo, in a manner the emperor himself would have recognized, i.e. Tibetan spelling already reflects Tibetan pronunciation as it once was.

The only transcription system that can legitimately claim to be phonetic is the International Phonetic Alphabet, of which the vast majority of Tibetologists are ignorant. The system which Nicholas Tournadre proposes (Tournadre and Dorje 2003: 475-478) accurately reflects the pronunciation of Modern Standard Tibetan and is quite easy on the American eye. However, for authors such as Tuttle (2005: xvii) and Kapstein (2006: xvii) among others the symbol ‘ä’, although it represents a sound in Modern Standard Tibetan quite distinct from ‘e’, is too confusing and ugly (Tournadre and Dorje 2003: 431). Such authors replace ‘ä’ with ‘e’, rendering the system no longer phonetically accurate. Inexplicably, the symbols ü and ö, just as familiar from German and just as odd looking in English, these authors embrace.

Despite the North American abhorrence of diacritics, these authors also put an acute accent over a final ‘e’ in Tibetan transcription, merely to indicate this letter is not silent. North American Tibetanists and their students do not have to spell the name Jacques Bacot, Christina Scherrer-Schaub, and Takeuchi Tsuguhito as Zhak Bako, Kristina Shaier-Shop, or Takéuchi Tsuguhito, in order to more or less pronounce them correctly. How surprising that Tibetan, the one language one would expect everyone interested in Tibet to have familiarity with, causes such consternation. Students of Irish history and literature—even undergraduates—are asked to pronounce an ‘m’ sometimes as a ‘v’ without apology.

A propos du terme ‘riz’ et de l’hypothèse du groupe dialectal de Sems-kyi-nyila en tibétain du Khams

Hiroyuki SUZUKI
(Aix-Marseille Université / CNRS / JSPS)

1. Introduction

Il est indiscutable que, d’un point de vue traditionnel, les dialectes tibétains parlés dans le Yunnan font partie des dialectes du Khams, et plus précisément à une sous-classification de ce groupe que j’ai déjà discutée ailleurs (Suzuki 2009a:17). Cependant, cette sous-classification pourrait être sujette à caution dans la mesure où elle repose principalement sur la base de critères phonétiques. Certaines caractéristiques phonétiques sont parfois franchement étonnantes, mais équivalent néanmoins à des correspondances régulières du tibétain écrit. Si ces caractéristiques sont partagées par certains dialectes du voisinage, elles permettront de valider la sous-classification de ces dialectes.

Cet article se propose d’expliquer les formes phonétiques des mots qui désignent le ‘riz’ dans plusieurs dialectes appartenant au groupe dialectal de Sems-kyi-nyila (dérivé du terme moderne Shangri-La), avec pour objectif de montrer que ces formes proviennent du tibétain littéraire. Le but de cette analyse est d’étayer l’existence de ce groupe dialectal.

2. Classification dialectale du tibétain du Yunnan

J’ai proposé ailleurs (Suzuki 2009a:17) une classification du tibétain parlé dans le Sichuan et le Yunnan, fondée à la fois sur des correspondances phonétiques et sur le degré d’intercompréhension entre les dialectes. Cette classification a été révisée plus récemment (Suzuki 2010). J’ai depuis effectué d’autres recherches sur le terrain et la classification actuelle comprend au total trois groupes et dix sous-groupes. La classification des dialectes parlés dans le Yunnan, actualisée et complétée par un plus grand nombre d’exemples, est la suivante:

1. La plupart des données tibétaines traitées dans cet article ont été obtenues avec l’aide des membres du Makye Ame - Palais tibétain de Shangri-La (Kunming).
2. Les noms des groupes et des sous-groupes sont donnés en phonétique, suivi d’une translittération en Wylie correspondant au tibétain écrit. Le nom des dialectes apparaît en phonétique, tandis que le toponyme est donné en pinyin (entre les parenthèses). Cette

 Nagskerag (Geza, Xianggelila)

Quelques dialectes manquent à ce schéma, par exemple, le dialecte de Bodnjug-lo parlé à Bingzhongluo (Gongshan, préfecture de Nujiang), celui de Wengshui parlé à Geza (Xianggelila) et celui de quelques villages de Foshan et de Yangla (Deqin), parce que les recherches sur le terrain n’ont pas encore pu être effectuées. Dans cet article, parmi les dialectes énumérés dans le tableau ci-dessus, on abordera uniquement le cas des dialectes classifiés dans le groupe de Sems-kyi-nyila.

Les dialectes appartenant au groupe de Sems-kyi-nyila partagent fondamentalement les caractéristiques suivantes pour la correspondance :

- la série de c, ch, j correspond aux affriqués ou occlusives rétroflexes,
- la combinaison avec un ra-btags ne produit pas de rétroflexe sauf (’dr,
- l’initiale l correspond à une latérale alvéolaire,
- l’initiale y correspond à une approximante palatale.

On trouve bien entendu quelques exceptions à ces règles.

3. Le mot ‘riz’
Dans les dialectes appartenant au groupe de Sem-kyi-nyila, et en particulier dans ceux du sous-groupe de rGyalthang, il existe un mot ‘riz’ dont la forme ne semble pas provenir de la forme ‘bras’ correspondant au tibétain littéraire.

3-1. Liste et explication du mot ‘riz’

Voici une liste des formes dialectales pour le ‘riz’:

3 Cet article utilise la description phonétique et elle inclut plusieurs signes phonétiques qui ne sont pas définis en API, mais utilisés en Chine pour assurer une description rigoureuse (cf. Zhu 2010), exception faite du ton, pour lequel on utilise les signes ci-dessous qui peuvent être ajoutés avant un mot: 

°: haut ^: montant _: descendant-

4 Le dialecte actuel de Phuri a deux variétés : celle authentique et celle des immigrants dont le village natal est Wengshui et Dongwang. Le dialecte présenté ici correspond à la seconde variété. Le parler de la jeune génération ne possède plus la série occlusive palatale, et on doit
D'après cette liste, on voit que plusieurs dialectes utilisent une forme dérivée du tibétain écrit drus ma, tandis que les autres formes semblent être des correspondances quelque peu aberrantes du tibétain écrit 'bras. En outre, quelques dialectes qui utilisent la forme correspondant à drus ma possèdent aussi celle correspondant à 'bras, et ces deux mots ont un sens différent : 'riz prêt à manger' versus 'riz en tant que plante.'

Envisageons d'abord la forme du dialecte de Lamdo /ɲɟː/. Elle est presque régulière, dans la mesure où le ra-btags a généré un changement de la consonne initiale en palatale (sauf la combinaison (')'dr). Tous les dialectes, exception faite de ceux du sous-groupe de Melung, présentent ce type de correspondance initiale, mais dans la plupart des dialectes, l’articulation palatale a convergé avec celle de la prépalatale. En subissant cette palatalisation, le mot ‘riz’ devrait devenir une forme avec une initiale prépalatale, mais en fait, dans la plupart des dialectes (sauf Lamdo, Phuri et mBacug), il présente une initiale vélaire. Or, d’après l’analyse que j’ai faite en 2010 (Suzuki 2010) pour le dialecte de Lamdo, ce dernier possède un système consonantique plus archaïque que les autres du groupe de rGyalthang; on peut faire l’hypothèse suivante pour le changement phonétique5 :

*br > /ç/ > /ɕ/
*br > /ʒ/ > /dz/ 

Dans ce processus, la fricative palatale a convergé avec la prépalatale, tandis que l’occlusive palatale maintient l’état palatal dans le dialecte de Lamdo6. Si l’on considère que la forme de Lamdo est archaïque, on peut alors affirmer que le mot ‘riz’ a évolué de la forme /ɲɟː/ à celle d’une initiale vélaire dans la plupart des dialectes. Il n’est pas non plus exclu que la prononciation réelle [ɲɟː] puisse être analysée par les locuteurs comme une variante de /ŋgiː/, qui se prononce souvent [ŋgeː]. Les formes de sKadgrag/ mTshongu /ŋgiː/, de

5 Cette hypothèse peut être étayée en raison de la linguistique historique portant sur les données de dialectes tels que ceux de Yangthang/Choswateng, Nyishe/Jiangdong et mBacug, mais il n’est pas possible d’en donner une explication détaillée ici.

6 Le dialecte de Lamdo possède /ç/, qui ne provient pas de by mais de sl et lh en tibétain écrit. Les dialectes qui possèdent /ç/ provenant de by sont ceux de Yangthang/Choswateng et Nyishe/Jiangdong.

7 On peut noter que le dialecte de Qidzong a une initiale vélaire pour le mot ‘riz’, même si ce dialecte possède une phonème /ʃ/, qui correspond à 'br comme /ŋʃ/ 'brug ‘tonnerre,
Maoniuping /ˈŋgiː/, de Nyishe/Thangsme /ˈŋgiː/ et de Qidzong /ˈŋgeː/ pourraient corroborer cette deuxième hypothèse. Toutefois les formes dans les autres dialectes (sauf mBacug) possèdent une voyelle postérieure. Le dialecte de mBacug possède une forme correspondant quasiment régulièrement à ‘bras’. Quoi qu’il en soit, si le mot ‘riz’ est bien dérivé de la forme ‘bras’, on aurait affaire à un développement singulier de l’initiale commun aux dialectes de Sems-kyi-nyila.

D’autre part, la forme du dialecte de Daan /ˈŋguː/ est aussi régulière, comme je l’ai mentionné (Suzuki 2011:125), la plupart des exemples de la combinaison d’une labiale avec un ra-btags correspondant à une fricative vélaire ou à une occlusive vélaire dans le cas de l’existence d’une prénasalisation. Mais le changement de son n’est pas identique à celui du dialecte de Lamdo, parce que la chute du ra-btags est une correspondance normale dans le dialecte de Daan.

Dans les sous-groupes du Mont Yunling Est et de Melung, tous les dialectes utilisent la forme drus ma sauf les dialectes de Nyishe/Thangsme et de Daan. On peut noter la forme de Daan, qui est isolée dans l’aire linguistique du naxi depuis environ 500 ans selon la tradition locale (Suzuki 2009b) ; par conséquent on peut penser que le mot correspondant à ‘bras’ a été progressivement remplacé dans les dialectes du sous-groupe de Melung par un mot correspondant à drus ma. Ce processus peut s’appliquer au cas du sous-groupe du Mont Yunling de l’Est, dans lequel la forme attestée dans le dialecte de Nyishe/Thangsme est préservée jusqu’à aujourd’hui. Plusieurs dialectes possèdent les deux formes, mais elles diffèrent d’un point de vue sémantique.

3.2 Note à propos du mot ‘faire’

dragon.’ L’initiale palatale qui précède une voyelle antérieure pourrait être indistincte avec cette vélaire.

8 /ax/ provient d’une rime ar en tibétain écrit.

9 On peut ajouter un autre exemple du dialecte de Yangthang/Gyennyemphel. On y trouve deux mots /ˈhuː/ ‘piller’ et /ˈhʊː/ ‘démanger,’ qui pourraient correspondre à ’phrog et ’phrug en tibétain écrit respectivement. Cela semble suggérer que la correspondance phonétique /ɕ/ dans nombre de dialectes est articulée de façon plus postérieure devant une voyelle postérieure. Comme ce dialecte de Yangthang/Gyennyemphel ne possède aucune fricative vélaire, il est prononcé comme une glottale /ʰ/.

10 En voici un autre exemple : le dialecte de mBalhag (appartenant à un sous-groupe indépendant du groupe de sDerong-nJol ; parlé à l’ouest du district de Xianggelila). Ce dialecte a une correspondance de la série palatale avec ’br, par exemple, /ˈɲɟə/ ’bri ‘yak femelle,’ mais /ˈdʒiː/ ‘bras ‘riz.’ Ce type de correspondances multiples pour la même orthographe est actuellement à l’étude.

11 Le village de Nixi se situe à l’endroit le plus près de Jiantang parmi les villages où on parle un dialecte appartenant au sous-groupe de Mont Yunling Est. La proximité géographique de l’aire dialectale de rGyalthang est susceptible d’avoir influencé le développement du dialecte de Nyishe/Thangsme.

12 Il est notable que les dialectes avec une telle distinction sémantique au sujet du ‘riz’ sont parlés dans la région où le riz se plante.
Curieusement, dans une partie des dialectes appartenant aux sous-groupes de rGyalthang, de Phuri et de Lamdo, le mot ‘faire’ a également une correspondance similaire avec le mot ‘riz.’

Cette section présente le verbe ‘faire’ qui peut fonctionner comme verbe support. Voici une liste des formes dans les divers dialectes :

</table>

D’après cette liste, on constate que le mot ‘faire’ correspond à las dans le dialecte de Nyishe, et qu’il est associé à byed dans les dialecte des sous-groupes du Mont Yunling de l’Est et de Melung. Les autres formes sont mystérieuses. En tibétain écrit, le verbe bgyid ‘faire’ semble correspondre à la forme de rGyalthang /⁶gi:/ . Toutefois cette identification est problématique, parce qu’une seule partie de locuteurs l’utilise et les autres utilisent /⁹gi:/ , une forme avec une prénasale comme des autres dialectes. Or, une occlusive vélaire avec un ya-btags ne produit jamais une initiale occlusive vélaire dans aucun des dialectes ci-dessus.
Les formes incluant /ˈjeʔ/, /ˈweʔ/ ou /ˈbeʔ/ proviennent de *byed* et constituent des correspondances exceptionnelles, mais ce mot a une forme exceptionnelle dans d’autres groupes dialectaux, notamment en Amdo.

Il est probablement plus difficile d’expliquer que l’origine des formes avec une initiale /ɡ/ est *byed*, comme dans le cas du ‘riz,’ parce que la série *py, phy, by* génère presque toujours des fricatives prépalatales dans tous les dialectes. En outre, toutes les formes dialectales possèdent une prénasale devant l’initiale vélaire, en dépit de l’absence d’‘a-chung’ devant les diverses formes verbales de *byed* en tibétain écrit. Il est donc encore difficile de se prononcer sur ce point. Ce type de correspondances se retrouve seulement dans les sous-groupes de *rgyal-thang*, de Phuri et de Lamdo.

### 4 Conclusion

Mon objectif dans ce bref article a été de proposer des clarifications qui permettent d’expliquer certaines formes aberrantes du terme ‘riz’ dans les dialectes du groupe de Sems-kyi-nyila du Khams. Dans ces dialectes, certaines formes comportent une initiale vélaire étonnante qui ne semblent pas, à première vue, dérivée du tibétain écrit ‘bras ‘riz.’ Toutefois, grâce au cas du dialecte de Lamdo, on peut avancer l’hypothèse d’une évolution phonétique commune présentée dans le § 3.1, et trouver une régularité pour cette correspondance phonétique exceptionnelle. En outre, le mot ‘aller’ ‘gro’, qui comporte également une forme exceptionnelle, correspondant à la forme sans *ra-btags*, vient aussi étayer cette hypothèse.

L’existence de cette innovation très particulière dans l’évolution du système consonantique vient à l’appui de l’hypothèse du groupe dialectal Sems-kyi-nyila. La classification finale des dialectes est pour le moment une question “secondaire”, et l’essentiel reste dans l’immédiat de concevoir une description précise et détaillée d’un nombre important de dialectes, qui rendra possible une classification dialectale plus détaillée.

### Références

13 Dans la plupart des dialectes en amdo, on utilise /je, ji/ pour ‘faire.’

14 On peut noter que la forme du verbe ‘faire’ avec une initiale occlusive vélaire existe dans le dialecte de Thewo /gi/ (Diebu, Gannan, Gansu) et également dans la langue Sherpa /ki/ (Solukumbu, Népal) [selon Nicolas Tournadre (contact personnel, 2011)]. Il y a un autre avis au sujet de l’origine du mot ‘faire’ avec une initiale vélaire, selon lequel ce mot peut correspondre à ‘gul’ ‘trembler’ en tibétain écrit, dont le sens a changé et est devenu celui de ‘faire’ [selon Ellen Bartee (contact personnel, 2011)].

15 Cette particularité phonétique du mot ‘aller’ est courante dans les dialectes parlés dans le Yunnan, y compris dans une partie de dialectes du groupe de sDerong-njol.
Le terme ‘riz’ dans le dialecte de Sems-kyi-nyila

‘Light’ on the Human Body
The Coarse Physical Body and its Functions
in the Aural Transmission from Zhang zhung on the Six Lamps

Henk Blezer

IASTAM, ICTAM VII, September 7th–11th, 2009
Asian Medicine: Cultivating Traditions and the Challenges of Globalisation
Institute of Traditional Medicine Services, Thimphu Bhutan

The Instructions on the Six Lamps: sGron ma drug gi gdam pa

This contribution starts from the premise that there is a fount of Tibetan knowledge on human physiology that is not explicitly medical or primarily available in medical texts. In this paper, I shall attempt to mine some of this knowledge outside medical treatises and render it more accessible for a non-tibetologist audience, by organising its quantitative data in tables and adding brief discussion. More in particular, we shall examine relevant knowledge of human physiology that is implicit in Bon Great Perfection (rdzogs chen) texts of the so-called Aural Transmission from Zhang zhung or Zhang zhung snyan rgyud; henceforth abbreviated to ZZNG. I should like to discuss one particularly spectacular example that appears in The Instructions on the Six Lamps from the Aural Transmission from Zhang zhung of the Great Perfection (rDzogs pa chen po zhang zhung snyan rgyud las sgron ma drug gi gdam pa), including information from some of the commentaries and dependents of this instruction text.

Doctrinal and Scholastic Matters

The Six Lamps appears in the ‘inner section’, on practical guidance in the secret instructions, of The Four Orally Transmitted Cycles (man ngag dmar khrid of ZZNG bKa’ brgyud skor bzhi). The four cycles are (see e.g., YTKC: pp. 336ff):

- **Outer**: the general definition of the view (*phyi lta ba spyi gcod*);
- **Inner**: practical guidance in the secret instructions (*nang man ngag dmar khrid*);
- **Secret**: perceiving awareness directly (*gsang ba rig pa gcer mthong*);
- **Ultra secret**: finally deciding on the way things are (*yang gsang gnas lugs phug gcod*).
Some Further Background

The text, like most of the root texts in the *Four Orally Transmitted Cycles* is undated. It is supposed to have been revealed, in so-called ‘near transmission’, by dPon chen Ta pi hri tsa to sNang bzher lod po (placed in the 7th/8th c. AD). As the story goes, Ta pi hri tsa appeared to sNang bzher lod po when he resided at Brag sha ba gdong hermitage, in the North of Dra bye.

It will not come as a big surprise that six lamps, in total, are explained in *The Instructions on the Six Lamps*. There is no occasion to discuss all six teachings here. The first one holds most relevance to our study. Later sections of the text, on the other lamps are very much involved with varieties of ZZNG tantric Great Perfection subtle physiologies, a topic that need not detain us here.

Which are the Six Lamps?

1. The lamp of the abiding base or primordial ground (*gnas pa gzhi'i sgron ma*);
2. The lamp of the flesh and the mind or heart (*tsi ta sha yi sgron ma*);
3. The lamp of the soft-white channel (*dkar 'jam rtsa yi sgron ma*);
4. The far-reaching water lamp (*rgyang zhags chu yi sgron ma*);
5. The lamp setting face to face with the pure realms (*zhing khams ngo sprod kyi sgron ma*);
6. The lamp of the time of the intermediate state (*bar do dus kyi sgron ma*).

The Formation of the Human Body — Great Perfection ‘Cosmology’ avant la lettre

At the first lamp, the lamp of the abiding base or primordial ground (*gnas pa gzhi'i sgron ma*), we find a curious brief discussion on cosmology and formation of the human body. This is not one of the more usual discussions of the gestation of the individual body after conception, such as appears in medical ‘embryology’ and other treatises (cf. Garrett 2008)—which are particularly ubiquitous in discussions of so-called intermediate states or *bar do* between death and rebirth, in the phase of ‘becoming’ or rebirth. This section is surprisingly articulate and—perhaps not so surprisingly—systematic on the constitution of the coarse human body and its (dis)functions. In the process, primordial light, sound and rays (*’od sgra zer*) mix with awareness (*rig pa*), and we witness a gradual ‘development’, ‘condensation’ or ‘coagulating’ of primordial light etc. and nescience-based mentation into coarse material or physical existence, while straying further and further from a non-conceptual primordial ground or base.
This text and its commentarial traditions develop a somewhat solipsistic perspective on the universe and how it came into being, for instance, deriving the material factors of existence, both internal and external, from light and mental factors. They discuss, amongst others:

- The emergence of the external world (phyi snod) and;
- The sentient beings contained in it (nang bcud);
- Their mentally and physically conditioned existence;
- And also the contextualisation and manifold relations of the former.

The systematic treatment of these topics, quite literally in the ‘light’ of Great Perfection view and vision, such as typical tropes of cosmogenesis and anthropogenesis from primordial light, of duality emerging form nonduality, may be revealing in several ways. Its treatment of the constitution of the body gives data on physiology in the ZZNG Great Perfection systems, but also reveals aspects of the wider episteme that is implied in this knowledge of the universe and the human body that is displayed here, and of its complex relationships to other Tibetan epistemes, such as we can find in medical treatises and scholastic digests of doctrinal matters in Buddhist traditions known as Abhidharma (Tib. mNgon par chos mdzod) but in Bon, where the ZZNG is native, mostly referred to by the abbreviated term mDzod.¹ For more information on the Great Perfection see Germano (e.g., 1994); for an introduction to the lights or lamps in Buddhist Great Perfection traditions, see Scheidegger (e.g., 2007).

In the following, I shall also briefly touch on comparable materials from a Bon po text from the Mother Tantra, The Sun of Compassion of the Mother Tantra (Ma rgyud thugs rje’i nyo ma), which—considering its specific tantric background, not surprisingly—is equally much concerned with yogic techniques and also shares a similar Great Perfection view.

The Instructions on the Six Lamps richly deserves to be opened up to discussion from more explicitly medical, cosmological or scholastic perspectives and to be subsequently studied in more detail. With this first and admittedly very preliminary contribution, I intend to provide the raw materials for such a future discussion, and also attempt to trace the first epistemic clashes and outlines that have come into view. First, I shall present the major data regarding anthropogenesis and cosmogenesis, contained in this text, in tabular form, both in Tibetan and in English translation (cf. a conspectus of the text with commentaries in Appendix 1).

¹ Note that for ideological reasons Sanskritic terms usually are avoided in Bon discourse.
Table Ia — Anthropogenesis and Cosmogenesis in *The Instructions on the Six Lamps*

Contextualising The Instructions on the Six Lamps

When we review this peculiar ontological-cosmological classification in more detail, below, it will quickly become apparent that it is difficult to relate to other extant Bon systematisations of the world and the human body.

— There appear to be only very minor matches with Bon ‘Abhidharma’ or mDzod.
— There is even less overlap with medical texts.
— There is a modest degree of overlap with discourse on intermediate states (bar do).
— Indeed, this ‘system’ does not seem to relate to much else, outside its own ZZNG Great Perfection environment or texts on comparable yogic expertise (Mother Tantra).

But, for all its uniqueness, the classificatory system employed here, structurally, is a variety of the fivefold tantric system (with some parts in threes), in which the Great Perfection partakes. It also resonates with the latter’s involvement with death and dying. Expertise on death, dying and intermediate states (bar do), in its history, appears closely entwined with the type of Great Perfection discourse that later, both in Buddhism and Bon, has become systematised as ‘leaping beyond the highest’ (thod rgal). But it relates best to another early ZZNG text, which is more explicitly cosmological, The Union of the Four Wheels (‘Khor lo bzhi sbrag’).
'Light’ on the Human Body

Systematisation of Bon Great Perfection ‘Abhidharma’
The Union of the Four Wheels (‘Khor lo bzhi sbrag)

ZZNG Great Perfection ‘Cosmology’

The systematisation in The Instructions on the Six Lamps relates well to the one employed in The Union of the Four Wheels. Both texts are included in The Four Orally Transmitted Cycles (bKa’ brgyud skor bzhi) of the ZZNG. Considering the subject matter—straying from a (non-dual) primordial state—the data presented above relate especially well to the second, i.e., the ‘samsaric’ part of the Four Wheels: the wheel of the interdependence of realisation and illusion (rtogs ’khrul rten ’brel gyi ’khor lo). The second part presents the way that a lack of realisation arises as sāṃśāra (ma rtogs ’khor bar shar tshul) and indeed looks like a more systematic discussion of very similar material categories.

Great Perfection cosmology, such as appears in the Four Wheels and the Six Lamps, usually is phrased as a process of straying from original awareness or the primordial state. It is in fact, just another solution to the conundrum of bridging the gap from transcendent origins, beyond existence and non-existence, to existence in space and time, which every system of transcendence has to account for in its grand historical narratives, one way or the other.²

As said, the Great Perfection ZZNG cosmological approach deviates considerably from regular Bon mDzod (‘Abhidharma’), which is the basic text on Bon mDzod, The Inner Treasury of Existence (Srid pa’i mdzod phug) and finds no satisfactory match.³

Usually, Bon cosmology and theogony involve imaginative narratives on primordial eggs and mythic episodes of darkness and light, rather than this typically Great Perfection, epistemologically slanted ‘evolution through nescience’. In the Tibetan world, the egg theme appears most often in Bon traditions, but the egg imagery has a much wider and more universal currency as well, in China, North Asia and elsewhere (see Blezer 2000).

Let us look at some extracts from the nirvanic and samsaric sections of the Four Wheels cosmology, in Tibetan, followed by Karmay’s (1998a) rendering.

² Incidentally, the cosmological parts of the ZZNG neatly match the architecture of the post hoc restructuring or even new invention of the earliest, transcendent origins of the ZZNG lineages. They reveal the same doctrinal or intellectual sensibilities of the Great Perfection and, of course, pertain to the period of creation of the narratives. The manner of construction of the ZZNG lineage around transcendent origins I discuss elsewhere (Blezer 2010).

³ Likewise not in the rTsa rgyud gsang ba bsen thub or the rTsa rgyud nyi zer sgyon ma (which follows the latter in this respect).

Parallels in The Sun of Compassion of the Mother Tantra
(Ma rgyud thugs rje nyi ma)

The ‘subtle body’ part of these schemes in much richer detail also appears in a commentary to the Bon The Sun of Compassion of the Mother Tantra (Ma rgyud thugs rje nyi ma).\(^7\) As so often, its root text is divided into ground, path and result (gzhi lam ’bras). The commentary is attributed to Guru rNon rtse, believed to have been born in 1136 AD. Most relevant to us is the third section of the commentary on the ground (gzhi), the Ma rgyud thugs rje nyi ma las bon nyid thig le’i ’grel pa rtsa’i de nyid bzhi bcu rtsa lnga (pp. 317–356), on the ‘sphere of reality as it is’ (bon nyid kyi thig le). The ‘Bon body of reality as it is’ (pp. 319.6ff), is the first of four bodies of fundamental voidness, further

---

\(^7\) Dolanji dPe cha edition (870pp.). Thanks to Colin Millard for pointing to possible Mother Tantra parallels.
specified as spontaneously present. The other three bodies are discussed in later sections. The discussion of the first body of reality is subdivided into five parts (which begins on p. 319.6, near the very start of this section of the Ma rgyud cycle). Most pertinent is the fifth and last of these parts, on the manner of arising as the three maṇḍalas of the pure abodes (p. 328.4: zhing kham kyi dkhyil ’khor gsum du ’char tshul). The three maṇḍalas are: outer, inner, and secret (p. 328.5ff.). Of immediate interest is the maṇḍala inside the body (pp. 331.3ff.), which has an elaborate discussion of the ‘subtle body’, of channels, winds and drops (rtsa, rlung, thig le) and the like, for instance, pointing out the basis of establishing the body in primordial wisdom (pp. 331.5ff), it includes detailed discussion of the five types of wind (rlung) in relation to the inner organs, etc. (pp. 333ff.), and, incidentally implies a classificatory system that is very similar to that of the Six Lamps. The five impure organs and substances (bdud rtsi lnga), skilful practice of ‘extracting the essence’ (bcud len) and their transformation from demons of disease into power of medicine (deities), are also discussed (pp. 337.7ff).

Instructional Drawings from The Union of the Four Wheels

We should compare the scheme in the Six Lamps to schematic pictorial representations in instructional drawings, such as those depicted and discussed in Karmay (1998: 85ff.) these are not infrequent. There is a clear reference to these teaching devices in Yang ston dPal bzang’s classification of ZZNG texts: when discussing the second category of The Four Orally Transmitted Cycles (bKa’ brgyud skor bzhi): the ‘inner section’, on the practical guidance in the secret instructions, the Nang man ngag dmar khrid (as the fifth Bon section or bon sde), Yang ston dPal bzang (13/14th c. AD) mentions these booklets of drawings with writing on their backs. See the rdzogs pa chen po zhang zhung snyan rgyud kyi rtis byang thems yig rgyas pa, contained in the Zhang zhung snyang rgyud bon skor (sigla YST.1), pp. 12.4–13.1, esp. p. 12.4–7, Dolanji 1974: Inga pa snyan rgyud thugs kyi snying rnam [gtan] nyams kyi man ngag gnyis ste/1) ’khor lo dpe chung gi skor dang / 2) zhal bdams [gdams] gcig rgyud do/ ad 1) ’khor lo la shag pa [sbrag pa] bzhis yod de/ de gang zhe na/ • gnas pa bzhis i’[gzhis i]’ ’khor lo <b>rgyab yig dpe’ chung shag pa [sbrag pa] dang gcig/ • rtags ’khrul rten ’brel gyu ’khor lo <b>rgyab yig dpe’ chung shag pa [sbrag pa] dang gnyis/ • lus gnas rtsi’ ‘khor lo rgyab yig dpe’ chung shag [sbrag pa] gsum/ • bar do dus kyi ’khor lo rgyab yig dpe’ chung shag pa [sbrag pa] dang bzhis/o de ltar shag pa [sbrag pa] bzhis po de las ’khor lo bzhis shag [sbrag] zhes bya/o/ ad 2) zhal bdams gcig rgyud yi ge ris su ma bta bla ma i’ zhal la shes pa kho na/o de snyan rgyud kyi dam tshig yin pas gcig rgyud ma yin [13] pa kun la mi ston par gsungs so’i. Where do these Great Perfection Classifications Come from?

How do the cosmological systematisations in the Six Lamps relate to those in the Four Wheels and to the basic text of Bon mdzod: The Inner Treasury of Existence (Srid pa’i mdzod phug) and to important syntheses of medical knowledge in Tibet, The Fourfold Collection (’Bum bzhi), transmitted in Bon traditions, and a very similar compendium The Fourfold Tantra (rGyud bzhi). These collections, in an early form, probably date back to the 11th–12th c. AD. There is a good chance that The Fourfold Collection preserves an earlier redaction of The Fourfold Tantra, which is to say that the latter at some stage may have passed through bon po hands (cf. Blezer 2007). We will first investigate:

1. How The Union of the Four Wheels relates to The Instructions on the Six Lamps; then,
2. How The Inner Treasury of Existence relates to The Instructions on the Six Lamps; next,
3. How The Inner Treasury of Existence relates to The Union of the Four Wheels, and, lastly,
4. How The Instructions on the Six Lamps and The Union of the Four Wheels relate to The Fourfold Collection (’Bum bzhi) and The Fourfold Tantra (rGyud bzhi).

The Union of the Four Wheels (’Khor lo bzhi sbrag) & The Instructions on the Six Lamps (sGron ma drug gi gdams pa)

The Union of the Four Wheels and The Instructions on the Six Lamps

The Four Wheels in its section on saṃsāra (the ma rtogs ’khor bar shar tshul), elaborates on materials that also are systematised in the Six Lamps. Yet, as we can see in Table III, the received text of the Four Wheels relates best to the commentaries on the Six Lamps: the sGron ma’i ’grel pa nyi ’od rgyan and the sGron ma drug gi dgongs don ’grel pa. In the Four Wheels, the exposition appears more comprehensive, better organised, and more systematically classified and explained. See for example the section on the arising of disease, for which the Four Wheels includes the commentary (section 2, item 12, in Table II, above).

Relation of The Union of the Four Wheels and The Instructions on the Six Lamps

All this suggests that the Four Wheels may have to be dated after the Six Lamps, in any case. Considering the fact that the Four Wheels also includes bits and pieces from the Six Lamps commentaries, perhaps it even has to be dated after the probably earliest commentary, the sGron ma’i ’grel pa nyi ’od rgyan. That would put the Four Wheels well after the 12th–13th c. AD. The Four Wheels text indeed reads like a later systematisation of Bon Great Perfection mdzod, particularly of issues addressed specifically in the ZZNG.

One particular section of the Six Lamps that deals with rather generic issues (afflictions and constituents of a person) relates well to the root text of the Bon mDzod, called The Inner Treasury of Existence (Srid pa’i mdzod phug), with only slight alterations.

The Inner Treasury of Existence is a gter ma attributed to several discoverers. The version used here (Delhi 1966) is attributed to Gyer myi ’od, in the early 12th c. AD (1108 AD). Refer to section number 22, on the last page of the two-page tables on the Six Lamps (Table I).
For this we need to refer to Table IV. As we can see from the detailed juxtaposition of these three sources, the commentary on *The Teachings of the Six Lamps* (*sGron ma drug gi dam pa pa*), called *sGron ma'i 'grel pa nyi' od rgyan*, at this passage, merely cites the root text without any further comments. The commentary by Bru sgom, the *sGron ma drug gi dgongs don 'grel pa*, completely glosses over this passage. We may conclude that this piece of *mDzod* apparently was considered common knowledge and needed no comment.

Does this mean that this early 12th c. AD systematisation of Bon *mDzod* is one of the sources of the *Six Lamps* or is it merely common knowledge that could also have entered the ZZNG otherwise?

The Basic Text of Bon ‘Abhidharma’ (Srid pa’i mdzod phug) & Union of the Four Wheels (’Khor lo bzhi sbrag)

More Bon mDzod

As we can see in Table V, below, not only some parts of Six Lamps, but two particular sections of the Four Wheels also relate well to chapter (8) of the same root text of The Inner Treasury of Existence. They appear in items 10 & 11 of the section on saṃsāra in the Four Wheels (the ma rtogs ’khor bar shar tshul):

10. The five types of behaviour from the causes (of the afflictions) (rkyen las spyod lnga);
11. The five resulting constituents of a person (’bras bu phung po lnga).

Please note that these sections here appear in reverse order, relative to the mDzod phug. These passages also relate to generic categories, such as afflictions and constituents of a person, and afflicted behaviours. One, obviously, is nearly identical to the passage quoted above for the Six Lamps and indeed relates to the same mDzod phug section (compare Table V, below, to nr.22 of the Six Lamps tables, Table I, above, in the second section).

Relation of The Inner Treasury of Existence and The Union of the Four Wheels

If we refer to Table V, below, we again observe slight alterations. These correspondences may likewise have been common knowledge; under the circumstances that would be difficult to disprove. But, on the other hand, it may also indicate that this 12th c. AD systematisation of Bon mdzod is one of the sources that the Four Wheels lives from? Considering however, how little information from The Inner Treasury of Existence seems to have actually made it into the Four Wheels (or into the Six Lamps, for that matter), and also considering the deviating cosmologies, it seems rather unlikely that there would be any direct borrowing.

The Teaching on the Six Lamps (sGron ma drug gi gdam pa),
The Fourfold Collection ('Bum bzhi) & The Fourfold Tantra (rGyud bzhi)

Straying from Perfection: the Arising of Disease;
Nad ‘du ba rnams bzhi and Balance

At some point in the Six Lamps, the arising of disease is briefly mentioned. From flesh, blood, heat and respiration, from these four, arise the four types of ‘gatherings’ (of the triad wind, bile and phlegm: rlung, mkhris pa, bad kan; and ‘dus pa’i nad, combination disease): sha khrag drod dbugs bzhi las ‘du ba rnams bzhi byung. The four factors are explicit only from the commentaries: From respiration arises wind (pneuma) disease, from heat: bile disease, from blood: phlegm disease, and from flesh: combination disease.14

With a view on the interdependence and ‘balance’, or cha snyoms, of these humours or pathogenic factors, I might add: as already pointed out by Geoffrey Samuel (2001), that the issue of ‘balance’ of the humours, as in the Galenic or Islamic system, may be somewhat problematic when applied with the same implications to Tibetan version of the three factors of disease (Skt. dosas), the nyes pa gsun. Tibetan nyes pa gsun, or here, the ‘du ba rnam bzhi, the four types of ‘gatherings’, may also have been conceived of as pathogenic factors per se, in any case they are here explicitly labelled as such: as nad ‘du ba, pathogenic ‘gatherings’ or ‘du ba nad (see, e.g., the Four Wheels, p. 459.3ff.; the Tibetan is quoted in the note above).

The Fourth nad: ‘dus pa’i nad. E.g., Bad kan smug po,
Brown Phlegm or Black Bile?

The fourth of the (nad) ‘du ba rnam bzhi, confusingly is called (nad) ‘dus pa’i nad. This may need some explication. Usually ‘dus pa’i nad is considered a fourth category of illness, which is due to a combination (Tib. ‘dus pa, Skt. sannipātīka) of the three mentioned (or more) pathogenic factors. In chapter 5 of the ‘Bum nag po (that is in collection (‘bum) 4) of the Fourfold Collection (‘Bum bzhi) and in The Oral Instruction Tantra (Man ngag rgyud, that is tantra (rgyud) 3) of The Fourfold Tantra (rGyud bzhi), bad kan smug po is mentioned as an example of a first category of three ways in which ‘dus pa’i nad manifests. Bad kan smug po here is only an example for a disease that arises from four combined factors: bad kan, khrag, mkhris pa and rlung. Because of this complex causation, it is said to be difficult to cure.

Now I should like to speculate a little, might Bad kan smug po perhaps also be translated as ‘black bile’ rather than the more literal ‘black phlegm’, a rendering which tends to connect it with mkhris pa, or ‘(yellow) bile’, somehow. But that choice opens a veritable can of worms. Let us now first look what the Bon Fourfold Collection (‘Bum bzhi) and The Fourfold Tantra

Incidentally, this comparative table shows some of the interesting differences between these two compendia of Tibetan medicine. A different ordering of the materials and the more elaborate text in The Fourfold Collection immediately catch the eye. It should not detain us here, but it would be a worthwhile effort—that I look forward to take on, some day—to compare these various recensions of what originally looks to be the same ‘text’, and to work out the historical relationships between the two; as provisionally noted before, The Fourfold Collection looks like an early recension of what later became better known as The Fourfold Tantra (cf. Blezer 2007).

16 ... as per the treatment of the ailment caused by the combination of all the three nad-pas (doṣas), such an event takes place in three different ways, as follows:

(1) Combination of the nad-pas (doṣas) because of their own causative factors;
(2) Combination of nad-pas (doṣas) by the way of their time of manifestation; and
(3) By the way of simultaneous aggravation of these three nad-pas (doṣas).

Afterwards they get manifested in the uncooked (ma-smin = ṭma) form which is hot and poisonous ailment (ṭma-viṣa).

To begin with, as an illustration, Bad-kan Smug-po (Āruṇa-kapha) will be described with reference to its eight different aspects as follows:
A Long Example: *bad kan smug po*

Structural Problems in *The Fourfold Tantra*

The sections on *bad kan smug po* in *The Fourfold Collection* and *The Fourfold Tantra* are disproportionately long and fill an entire chapter. Apparently, *bad kan smug po* was considered important. But there also seem to be problems with the received text of *The Fourfold Tantra*. Fortunately we have another witness, *The Fourfold Collection*, with significantly different readings; which may help to clarify some of these problems. The main issue is that going by the way things are phrased in *The Fourfold Tantra*, *bad kan smug po* is only an ‘illustration’ or ‘example’ (*mtshon byed*), apparently even only of the first of three ways that *dus pa’i nad* manifests. The inceptive *dang po* (“first”), which appears immediately after the enumeration and which Dash glosses over by translating as “to begin with”, indeed suggests that the text here resumes the first item of the three foregoing—read: *dang po ni*.

Originally, there may have been a brief resume of the preceding enumeration in three, in this place in the text. This is first borne out by the deviating readings extant in versions of the Bon *Fourfold Collection*, which, immediately following this, has a numbered second and a clearly recognizable but unnumbered third item. This is in fact the part that corresponds to *phyi ma ma smin-tsha ba dug nad de* in *The Fourfold Tantra*, which Dash translates as “Afterwards they get manifested in the uncooked (*ma-smin = āma*) form ...”—the first half, which in *The Fourfold Collection* connects to point 2—and “... which is hot and poisonous ailment (*āma-viṣa*)”—the latter half, which in *The Fourfold Collection* connects to 3. Thus, that phrase in *The Fourfold Tantra*, which there appears rather awkwardly orphaned, in *The Fourfold Collection* stands in a more logical place. Secondly, if we read *dang po* as indeed pointing to the first item, which the readings of *The Fourfold Collection* and commentaries recommend us to consider, the *The Fourfold Tantra* would fail to resume the other two points explicitly in its text.

*The Fourfold Tantra* refers to *bad kan smug po* as “an illustration” or “an

---

(i) *Rgyu* (*viprākrṣṭā-hetu*) or distant cause;
(ii) *Rkyen* (*samvākrṣṭā-hetu*) or immediate cause;
(iii) *Gnas* (*sāthāna*) or location;
(iv) *Dus* (*kāla*) or time of provocation;
(v) *Rigs* (*kāla*) or varieties
(vi) *Rtag* (*laksana*) or signs including method of examination
(VII) *Bcos-pa’i thabs* (*cikitsā-vidhi*) or line of treatment; and
(VIII) *Rjes-bcad* (*uttarakāla-cheda*) or the treatment of the residual morbidity.

(i) As per the *rgyu* (*viprākrṣṭā-hetu*) or distant cause, [this ailment *bad-kan smug-po*] is caused by the aggravation or vitiation of four elements, viz., *bad-kan* (*kapha*), *khrag* (*rakta*) or blood, *mkhri-pa* (*pitta*), and *rlung* (*vāyu*).

Since the ailment is caused by the combination of all the *nad-pas* (*doṣas*), signs of all these *nad-pas* are manifested because of which it is difficult to cure. ... [freely rendered by Dash 1999, pp. 2f.; note that Dash translates *The Fourfold Tantra* as if it originally were an Indic text and he tries to reconstruct the supposed Indic original, in Sanskrit. Needless to say, *The Fourfold Tantra* never may have existed in that form in India; in fact, *The Fourfold Tantra* looks to be a later, Tibetan systematisation of medical knowledge, including Indic Ayurvedic knowledge.]

example”. But it would be odd, indeed, to dedicate a whole chapter to just one example, perhaps even as a clarification of only one of three items, without the other two being resumed. But the seemingly exclusive connection to the first point listed may not always have been explicit in the root text. Most likely that reading is due to a loss of text and context in The Fourfold Tantra, The Fourfold Collection, on the other hand, avoids citing bad kan smug po as an “example” but at this point explains the name bad kan smug po, in a way that is in keeping with what follows. In this passage at least, The Fourfold Tantra seems to reveal a condensed and dislocated text. The order in The Fourfold Collection makes more sense; its extra text also finds an organic place in the exposition. The many rounds of redaction that The Fourfold Tantra underwent before it reached our hands may here have resulted in a loss of text.

Probably, the long digression on bad kan smug po is appended to the discussion of the three humours for a good reason: considering the nature of combination diseases it is logically inserted at the discussion of the combination of nyes pa, in both fourfold medical compendia. Considering these remarks on structure, the excessively long example of bad kan smug po looks like a later insertion into a pre-existing system. Furthermore, it looks like it could only be integrated into the Indo-Tibetan Ayurvedic humoral system at the cost of some epistemic dissonance. If we appreciate the actual discussion of the primary causes of bad kan smug po, as it is presented both in The Fourfold Collection and The Fourfold Tantra—especially the emphasis on the factor blood—there is a suggestion of an attempt to harmonise two diverging humoral systems: the three Indo-Tibetan nyes pa (gsum) and the four Greek humours. The ‘Greek’ ones are simply inserted into the primary causes for this particular ailment; to which one should then perhaps add the resulting combined disease, bad kan smug po.

Bad kan smug po and Melancholia: A Culture Clash of Humoral Systems?

Indeed, there is something interesting in the manner in which the causes of bad kan smug po are described in the two fourfold collections. The factors causing bad kan smug po are said to be: phlegm, blood, bile and pneuma (bad kan, khrag, mkhris pa and riung). All these factors combined indeed effectively span two different humoral systems. Thus, on the face of it, the chapters on bad kan smug po of The Fourfold Collection and The Fourfold Tantra may reveal traces of a collation of different medical systems. It is indeed well known that The Fourfold Collection and The Fourfold Tantra are, perhaps are the result of the first successful attempt, after the Moon King or Zla ba’i rgyal po (see Meyer 2002), at synthesis of the disparate elements of various medical systems that reached Tibet at the end of the first millennium AD, such as from Indian, Chinese, and Greek systems—the latter mediated through Islamic culture. In Greek humoral theory, with yellow bile, blood, phlegm and black bile, blood (cf. khrag), indeed appears as one of the four humours, while yellow bile (cf. mkhris pa) and black bile (cf. the combined disease, bad kan smug po, brown phlegm or perhaps black bile) appear as two others, and, lastly, ordinary phlegm (cf. bad kan) as the fourth.

- Both the fourfold medical compendia (the ’Bum bzhi and the rGyud bzhi) thus add the Greek humour blood (khrag) to the primary causes
of bad kan smug po.

- ‘Black bile’ (μελαγχολία), or at least a factor that structurally takes its place, may be included in the total picture in the form of the combined disease (‘dus pa’i nad) bad kan smug po, which latter usually means brown phlegm, but here perhaps refers to black bile. It is well known that the term bad kan can occasionally also mean bile. Already in an earlier systematisation of medicine in Tibet, the aforementioned Moon King (Tib. Zla ba’i rgyal po, Skt. *Somarājā), brown (smug po) bad kan often is associated with the liver and gall bladder, and black bad kan with the spleen; these passages are to be discussed in detail in forthcoming publication.

- Phlegm then corresponds to regular bad kan (which in this case would not be bile).

The ‘Greek’ yellow bile may correspond to the ‘Tibetan’ bile proper (mkhris pa); nb. cf. also the semantic fields of Skt. pitta and pītā, which both imply yellow.20

But then there still is ‘Tibetan’ wind (rlung), which does not correspond to any factor in the Greek system, but apparently could not be omitted. If only to match the Tibetan system, the primary causes of bad kan smug po include rlung, and thus add up to five in total (if we also count the combined disease, bad kan smug po, itself).

A good working hypothesis is that there is influence from Greek humoral theory on the bad kan smug po chapter(s), which is still visible in a clash of humoral systems. This may be due to the inclusion of the ab origo xenotic category melancholia, as bad kan smug po, in early synthesising collections such as The Fourfold Collection and The Fourfold Tantra—and also in The Moon King (Zla ba’i rgyal po), already before that. The trace of that inclusion is visible structurally as a category, but not in the concrete symptoms: the symptoms do not match and bad kan smug po does not look like the same ailment as melancholia. One might thus speculate whether bad kan smug po, as a category, in Tibet, is ultimately of Greek-Islamic descent? Testing this hypothesis will have to wait for a separate article. The study of earlier attempts at integration, in The Moon King, may be essential to unlocking the problem. Pursuing this here, near the end of this long and detailed exposé, would lead us too far beyond our main concern: introducing knowledge of human physiology in the Six Lamps and the implied knowledge system—yet also, be it more tangentially, its relationship to bordering epistemes in Tibet and beyond—to which the present bad kan smug po hypothesis pertains.

---

Avicenna’s Graeco-Arab humoral system

according to element | air | fire | water | earth

According to the table, the Tibetan ZZNG system of the Six Lamps and Tibetan medicine is compared to the Graeco-Arab humoral system of Avicenna. The table highlights the similarities and deviations between the two systems, with specific focus on the five elemental causes, five elements, wind, fire, water, earth, and combined disease. The table also includes a comparison with the Skt. vāta, pitta, kapha, sanātipātīka “aranākapha”.
Another Epistemic clash: Five and Seven Constituents of the Body

There are more epistemic clashes visible, regarding human physiology, in the *Six Lamps* and Tibetan medical knowledge systems. For example, the *Six Lamps*, being a Great Perfection text, is developed according to the five-fold tantric Great Perfection system. This tantric system combines poorly with seven-fold classification system of constituents of the body in *The Fourfold Collection* and *The Fourfold Tantra*. As we saw above, the systematisation of the *Six Lamps* has:

1. The five elements (*byung lnga*): space (*nam mkha’*),
2. respiration (*dbugs*),
3. heat (*drod*),
4. blood (*khrag*),
5. meat (*sha*).

Compare this with, for instance, the *Fourfold Collection* (*Bum bzhi*), *Bum khra bo* or with *The Fourfold Tantra* (*rGyud bzhi*), the Explanatory Tantra (*bShad rgyud*), which derives from Ayurvedic theory (Vāgbhaṭṭa): lus zungs (bodily constituents):

1. food essence/chyle (*dvangs ma*)
2. blood (*khrag*)
3. flesh (*sha*)
4. fat (*tsil*)
5. bone (*rus pa*)
6. marrow (*rkang mar*)
7. semen (*khu ba*).  

---

23 Full quote: /lus zungs dzels khrag dang sha dang tshil/ *rus pa rkang mar khu ba bdun du bshad*/. Cf. also a very interesting article by Maas on constituents of the body in WZKS 2008.
Concluding Remarks

*The Instructions on the Six Lamps on Cosmology*

The *Six Lamps* shows an epistemologically tinged framing of the arising of the outer and inner cosmos, which is somewhat typical for Bon Great Perfection discourse: it starts with the first wavering from a non-dual primordial state. This of course addresses an age-old conundrum: how to articulate or visualise transcendent origins. It is the paradox of ‘getting’, somehow, from the ‘unbounded spaces’ beyond existence and non-existence, to concrete existence, embodied in space and time—in whichever episteme that is framed.

The ZZNG cosmologies that we reviewed, such as they appear in the *Four Wheels* and the *Six Lamps*, appear to deviate considerably from the regular Bon ‘Abhidharma’ or *mDzod*. We found some very minor, generic and inconsequential overlap with *The Inner Treasury of Existence*. But the cosmological and theogonical sections in Bon *mDzod* typically involve imaginative narratives on primordial eggs and mythic episodes of darkness and light, which on the whole are relatively characteristic for Bon; e.g., in texts such as *The Inner Treasury of Existence* (but, as said, also in the *rTsa rgyud* *gsang ba bsen thub* or the rather similar *rTsa rgyud nyi zer sgron ma*). In fact, it appears difficult to relate the cosmology of the *Six Lamps* to anything but its own kind, that is, to ZZNG and other Great Perfection materials. The best matches provide the later and more systematic *Four Wheels* or a late-12th c. AD witness, *The Sun of Compassion of the Mother Tantra*, a Mother Tantra commentary that treats of closely related matters.

**Death, Dying, Rebirth, and Intermediate State or Bar do**

There is obvious and more considerable overlap with literature on death, dying and rebirth, and with *bar do* discourse in general. But that match is far better for the more complete and systematic organisation of cosmology that appears in the ZZNG *Four Wheels* than it in fact would work for the older classification of the *Six Lamps*. In a preliminary way, Reynolds has summarised some of the overlap (Selections from the Bonpo Book of the Dead, San Diego 1997). This is a very involved issue and falls outside the scope of this paper.

Important to retain here is that this still is very much on Great Perfection home turf. It underlines the fundamental *indebtedness* of certain Great Perfection systems (such as the mentioned ‘leaping beyond the highest’ or *thod rgyal* practice) to the influential Tibetan discourse on death, dying, rebirth and intermediate states (*bar do*) in the 11th c. AD and later. If anything, the apparent lack of Bon or Buddhist textual antecedents for the systematic of the *Six Lamps* shows that Bon Great Perfection writers were entirely capable of developing their own unique knowledge systems or starting something new, if needs be—and factional identity indeed tends to make people stand in need of a distinctive teaching system.
By comparing it to the *Six Lamps* and its commentaries, we were able tentatively to date the *Four Wheels* to at least after the 12th c. AD. In general, ZZNG teaching traditions appear curiously insulated, both doctrinally and ‘historically’. It moreover is an a-temporality that appears almost cultivated, as if the ZZNG, more or less consciously, rhetorically, places itself outside time. This resonates well with the described cosmological episteme, but also with the literary design of the ZZNG lineage and its antecedents. We face a relatively characteristic Tibetan historicity that shows much overlap with other Tibetan historical sensibilities, such as we find in visionary and revelatory treasure or *gter ma* type systems, but also shows features that seem specific and perhaps even native to varieties of the Great Perfection.

Tibetan historicities show interesting variance. For example, one commonly meets historical sensibilities that prioritise moral over temporal causalities, while some, like here, apparently even cultivate a-temporal historical sensibilities. In the Bon ZZNG corner, on closer analyses, every document that has something of substance to say on a historical framework appears later than the late 11th c. AD, that is to say, with or after Yang ston chen po (see Blezer 2010).

Melancholia and *Bad kan smug po*, to be Continued

We also gained an interesting tangential hypothesis for further research. By all appearances, *bad kan smug po*, as a category rather than as a cluster of concrete symptoms of disease, may have entered from the Graeco-Arab cultural sphere into the grand eclectic syntheses of the fourfold medical compendia, *The Fourfold Collection* and *The Fourfold Tantra*, but before that also into the *Moon King*, perhaps the earliest effort at such a grand Tibetan synthesis.

*Bad kan smug po* may relate to black bile (*μέλας χολή*) in Greek medicine, which there implies the affliction *melancholia*. Yet, in Tibet, *bad kan smug po* does not involve the range of mainly mental afflictions that melancholia came to entail. Still, on a structural level in their redaction, the fourfold medical compendia seem to reveal a confluence of humoral systems. The category of black bile diseases, in spite of adjustments, looks like an important group, which apparently could not remain without discussion, and subsequently seems to have been integrated into an Ayurvedic humoral system. In the fourfold compendia it appears appended rather uncomfortably as a combined disease, at the end of the discussion of the three humours, as an example that covers a whole chapter. More work is definitely needed to make this firm, both from Tibetan and Graeco-Arab sources; particularly also detailed comparison with earlier attempts at synthesis, such as the *Moon King* probably represents, may be crucial.

The records of Tshul khrims mchog rgyal on the Black Phur pa cycle of the Tibetan Bon pos

J.F. Marc des Jardins, Concordia University

Abstract

The deity Phur pa is important not only in Tibetan Buddhist circles but also among practitioners of Bon. The Bon pos possess several different ritual cycles of Phur pa in various forms with unique liturgies. These traditions, their history and their particularities are still little known and have not yet been the object of scholarly research. This article focuses on one such ritual cycle, that of the Black Phur pa tradition, which is considered one of the most ancient in Bon. The goal of this essay is to contribute to the understanding of the tradition based on contemporary settings, lineage history, ritual artifacts and the personal chronicles of some of its important lineage transmitters.

Introduction

This article is part of a larger research project on the corpus of ritual practices of the Black Phur pa of the Tibetan Bon religion. Phur pa is a deified ritual dagger which is associated with rites of demarcation of sacred boundaries, exorcism, the pinning down and subjugation of enemies, killing, and commitments (dam tshig). It was probably imported to Tibet from India sometime during the Imperial Period or shortly later. The history of its spread can be understood from a number of sources, principally traditional religious lineage accounts, local historical records, monastic chronicles and sectarian historical archives.

Among both Buddhists and Bon pos Phur pa has come down through many different lineages of practice. The practices associated with each lineage are varied but generally resemble one another in strategies, goals and methods. However, they differ from one another principally in their iconography, doctrinal emphasis, individual history and their position within the general hierarchy of the classification of their sect’s teachings. The long history of the various Phur pa lineages is a testimony to the endurance and the social and religious relevance of these ritual techniques in Tibet. This article intends to research the lineage transmission of one corpus of Phur pa practice that claims a history of continued practice since the eleventh century, if not from antiquity. It is still performed by Bon po ritual specialists.

No previous studies have been conducted on the Bon po Phur pa. This lacuna is no doubt due to the small number of Bon specialists and to the relative scarcity and availability of written Bon po sources.

1 The author wishes to thank Concordia University, Faculty Research Start-up Grant for partially enabling this research.

2 The Canon of Bön Scriptures, the Kangyur (bka’ ’gyur, here K.) became available for only a short period at the beginning of the 1990s. It has been out of print for a number of years; however, thanks to the efforts of the Bon po lama Smon rgyal lha sras from Dbal khung
which make for the majority of written material on Phur pa, are also difficult to acquire due to the religious restrictions imposed on their circulation. The practices are esoteric and secret by nature and are transmitted through rituals of empowerment (dbang), explained through personal transmission (lung) and instructions (khrid), and learned through repeated communal or supervised rehearsals. Their lineage is acquired through an obligatory retreat, the length of which varies according to the peculiarities of the local tradition. Samten Karmay is the first to have discoursed about the Bon po Phur pa, though with great restraint, as his concise explanations comprise only four paragraphs. He briefly highlights the commonalities between the Buddhist and Bon po Phur pa and mentions the originator of the lineage, Stag la me ’bar, and the rationale for this practice, without additional detail.

The indigenous literature on Phur pa is quite large and is divided by functional categories and ritual cycles. These will be addressed in a subsequent article. Nonetheless, it is important to point out that there are currently at least nine traditions of Phur pa in contemporary Bon. There may have been other traditions of which we are unaware, which have not survived into contemporary times. Considered to be the most ancient Phur pa compendium of practice, the Ninefold Tantra of Phur pa and its commentary, the Tenth (Phur pa rgyud dgu ‘grel bcu), are traditionally held to have been transmitted by Stag la me ’bar, a disciple of Ston pa gshen rab, the mythical originator of Bon in Zhangzhung. Another considered equally ancient by the tradition is the Black Phur pa (Phur pa nag po) rediscovered by Khu tsha zla ’od, the twenty-sixth lineage holder according to the tradition. Yet another tradition, propagated widely only starting in the nineteenth century, is the Revealed Phur pa (Snyan rgyud phur pa, T.025) associated with Dbal ’bar stag slag can (Bstan ’dzin dbang rgyal). This practice is part of the Great Perfection Transmission (Rdzogs chen brgyud) which is considered the dgon in Nyag rong, it is currently available again in Chengdu. In this article, the volumes are referred to as K.n following the catalog published by Kværne, Per. Yasuhiko Nagano and Dan Martin (eds). Bon Studies 8: A Catalogue of the Bon Kanjur, Senri Ethnological Reports No.40. Osaka: National Museum of Ethnology, 2003. The publication of the commentarial section of the Canon (bka’ brten, here T.) began during the late 1990s and is still available in China. Its references to its volumes follow the catalog published by Karmay, Samten G. and Yasuhiko Nagano Bon Studies 5: A Catalogue of the New Collection of Bon po Katen Texts – indices. Senri Ethnological Reports No.25 (with CD-ROM). Osaka: National Museum of Ethnology, 2001. Very few copies of these two sets are currently held by North American libraries. It is also important to note that not all texts, commentaries and ritual compendium, on Phur pa are available in the Bka’ brten.

5 This information was given to me (May 2004) by one of the masters of Ye shes monastery in Nyag rong, the scholar monk (dge bshes) and reincarnated master (sprul sku) Seng ge sprul sku Rig ’dzin nyi ma (b. 1967). The Cultural Revolution (1966-1976) has apparently claimed several Bon po lineage holders and he has indicated to me that there may have been other Phur pa ritual cycles which were not included in the present edition (1998) of the Bka’ brten.
The Black Phur pa cycle of the Bon pos

most elevated Vehicle of Bon. These three systems, which are independent from each other, are considered to be part of the Old Treasure transmission (gter rnying) and are considered, by some monasteries, as more orthodox.

The following six other lineages are part of the New Treasure transmission (gter gsar) and incorporate Buddhist elements which are accepted as contributions from Padmasambhava (fl. 8th century). This Buddhist charismatic figure is considered by the followers of New Bon to be the younger brother of Tse dbang rig ‘dzin and son of Dran pa nam mkha’, two important Bon po masters of the period. Kun grol grags pa (b. 1800) was considered as one of the founders of what became known as New Bon and is recognized for having started a new wave of discovery of Textual Treasures. These were purportedly hidden in the eighth century, by the three aforementioned masters, to prevent the Teachings from disappearing during the persecution of Bon which followed. Hiding texts and artefacts is an old practice of the Tibetans. In fact, in times of persecution, the Tibetans hid their possessions by burying them under recognizable features of the landscape in order to perpetuate their location in the family memory and to be able to retrieve the goods at a later, more peaceful time. Tibetans have resorted to this again in recent times following the occupation of their lands by the People’s Liberation Army troops in the 1950s and during the Cultural Revolution (1966-76). As an aside, this has also resulted in a new wave of rediscovery of spiritual treasures involving contemporary Tibetan masters within and outside the Tibetan territories.

The nineteenth century was a period of great religious syncretism in Eastern Tibet. In order to counteract the religious hegemony and ardent proselytizing of the Gelug (dge lugs) sect, which controlled temporal power in Central Tibet until 1959, religious hierarchs of the other four competing Buddhist schools began to share teachings. This phenomenon was known as

---

7 I am uncertain why Seng ge sprul sku Rig ‘dzin nyi ma considered this as part of an Old Gter ma transmission. Being from the Ye shes monastery in Nyag rong, which upholds both New and Old Transmissions, it is possible that the claims of this system relating to the antiquity and orthodoxy of the tradition are accepted at face value by him. However, having been schooled at Snang zhih Monastery, which is a bastion of orthodoxy, he must have been aware of what, according to the Sman ri tradition, were the Old and New in the Phur pa traditions. I have not been able to verify this point further and it is my hope that this aspect will be clarified later.

the Rime (ris med, i.e. Non-Sectarian) movement. Accompanying this was a renaissance in Buddhist teachings with new ritual trends and a homogenization of ritual practices. Starting in the eleventh century, and slowly gaining increasing momentum, was another important movement involving the discovery of hidden teachings left by early sages, unearthed by predestined individuals. These Hidden Treasures, the Terma (gter ma), uncovered by charismatic Buddhist and Bon lamas, came on the religious scene in the form of documents, sacred objects – crystals, ritual daggers (phur bu), etc., signs, sounds, written syllables and revelations (mental treasures: dgongs gter). This mechanism of renewal was based partly on the charismatic authority of the Treasure discoverers, the Terton (gter ston), recognized as the reincarnation of a former master; and the institution of reincarnated lamas having the tacit support of the legitimizing religious authority, the monastic establishments.

Thus, the Terton were living religious authorities who renewed their own lineage with ideas, practices and rituals which were not necessarily in existence previously within their own schools.

The Bon pos have been rediscovering their teachings from the time of the initial persecutions, which started in the seventh century under the Buddhist King Srong btsan sgam po, and lasted until the fall of the Ganden Podrang (dga’ ldan pho brang) government of the Dalai Lamas in 1959. In the ninth century, under the reign of King Khri Song lde'u btsan, followers of Bon had either to convert to Buddhism or go into exile. Religious texts were hidden and it was not until the eleventh century that Bon po masters reorganized their religion in order to be able to compete with Buddhism, which had continued to be imported to Tibet until the end of the thirteenth century.

Thus, most written teachings of Bon are gter ma. They are generally classified in two main branches, as seen previously: the Old Treasure and the New Treasure Traditions. The canonical texts included within the Kangyur are categorized as Rediscovered Treasures (gter),10 Mental Treasures (dgongs gter), Southern and Northern Treasures (lho byang gter), Revelation (snyan rgyud), Rediscovered Treasures of/from a Protector (srung gter), and Scriptures (rgyud).11 Phur pa texts are part of the Rediscovered Treasures category when it comes to canonical texts such as the Nine Chapter Tantras of Phur pa (phur pa rgyud le’u so dgu pa; K.35, K.113, K.114).

The six other lineages of Phur pa are:

4. The Phur pa lower-robe of Tagla (stag la phur shams thabs?), rediscovered by Kun grol grags pa.
5. The Phur pa of Dechen Lingpa (bde gling phur pa), rediscovered by Bde chen gling pa.12

---

10 In this paper, when both Tibetan and Chinese transliterations are supplied, the first will be the Tibetan transliteration.
12 For a brief biography and a catalogue of his writings, revelations and discoveries, see Jean-Luc Achard, Bon po hidden Treasures: A Catalogue of gTer ston bDe chen gling pa’s Collected revelations. Leiden-Boston: Brill, 2004. In this work, there are references to a number of texts on Phur nag, however it is not yet clear whether those are independant gter ma, instructions on the old Phur nag tradition or on a Black Phur pa version of Bde chen gling pa. Further research needs to be completed first.
6. The Fierce Phur pa of the Three Body (*sku gsun drag phur*), rediscovered at the cave of sbas yul g.yung drung spungs tshal in Nyag rong by Gsang sngags gling pa. 13

7. The Canopy of Phur pa (*gdugs phur*), possibly the same as the Fierce Phur pa of Dranpa Namkha (*dran pa drag phur*) received by Gter chen bya btang Tshe dbang ‘gyur med in a Pure Vision (*dag snang*) (T. 208).

8. The form of Phur pa propitiated within the Tantric cycle of Dge khod (*dge khod phur pa*).

9. The form of Phur pa propitiated within the Tantric system of Me ri (*me ri phur*).

10. The Canon of commentaries (*bka’ brten*) also contains other forms of Phur pa, such as the Blo ldan phur (T. 077) written by G.yung drung tshul khrims dbang ldan; the Phur pa of Za from the cycle of Meri (*Zoa phur me ri’i dkyil khor*, T. 099) discovered by Sangs sngags gling pa; the Phur pa of the Eight Life-sap (*brgyad bcud phur*) of Mkha’ ‘gro ’Od ldan ‘bar ma, together with a host of other writings consisting of praises, concise rituals, supplication and prayers.

**Source Material on Ritual, History and Lineages**

The sources relevant to the history, lineages and practices of Bon po Phur pa include ritual texts, canonical literature, historical chronicles, root-Tantras (*rtsa rgyud*), initiation cards (*tsa ka li*), local monastic chronicles, paintings (*thang ka*) and local lineage history. The data derived from these documents follow an internal reasoning which supported earlier material as well as an ‘insider’s’ interpretation of the scripture and practices. Conducting an external investigation, corroborating dates and identifying members of the lineages remain constant challenges.

Canonical materials contained in the Kangyur and the Katen on the Black Phur pa are numerous. The source of the practice is to be found in the root-Tantra of Phur pa (K.33, K.113 and K.114). 14 This was rediscovered at a cave in Paro (*spa gro phug gcal*) in Bhutan, by Khu tsa zla ‘od ‘bar (b. 1024) in 1038. 15 The Tantra is made of nine texts with a commentary, altogether comprising ten volumes. The root-tantra itself consists of thirty-nine chapters. In conformity with the general genre of the Bon Tantras, the bulk of this scripture consists of ritual instructions, commitments (*dam tshig*), descriptions of several circles of deities manifesting as Phur pa, methods to control water demons (*chu srin*), gods, the burning of corpses (*ro bsregs pa*), *homa* ritual (*sbyin sreg*), the making of offering cakes (*gtor ma*), and a host of other practices. Each of the nine Tantras contains individual instructions regarding these various rites. This corpus is thus fairly significant in size and

---

15 This would then suggest that Khu tsa was 14 years old. Karmay has already pointed this problem out but has not yet suggested a way to resolve this chronology. However, he does mentions that Yon tan rgya mtsho suggested that the discovery must have happened during the second Rab byung (1087-1146). Karmay *Treasury*, 145 n. 1.
contains groups of rites which are extensively covered by later Phur pa systems. Although the Root-text establishes the rationales and the antecedents which legitimize the practices of the corpus, exact directions as to how to apply them are found in the many ritual manuals (sgrub thabs) of the later Phur pa corpora. The latter are therefore invaluable for studying the methods of practice of this system. Among them are also found prayers to the masters of the lineages. It was not until recent times that Bon po lamas resorted to printing these and other manuals in significant numbers. Local productions record the names of the masters who handed down the teachings. It is in using these that a clearer history of the dissemination of the Black Phur pa can be reconstructed.

Conciseness is a characteristic of gter ma and rituals of the later New Bon movement.16 Because of this, New gter ma texts are very commonly used by monks when performing privately sponsored rites in households. The larger cycle of the Black Phur pa is rarely performed in these circumstances because of the complexities of its recitation and length. Therefore, at least in the Khams and Amdo areas, the Black Phur pa rites are predominantly performed within monastic compounds and on grand occasions.

The main commentary on the Black Phur pa is the Great Commentary on the Concise Meaning of the Root-text (Don 'dus rtsa ba'i 'grel chen) allegedly written by Khu tsa. These texts are not readily available in contemporary monasteries. Most practitioners of Phur pa rely on their master’s instructions, which may or may not come from this last collection of instructions. The nature of these consists for the most part in drumming, ritual cake making, chanting, and directions on the proper order of recitation of the collection of texts, which can number well over thirty with excerpts inserted at strategic places during the larger unfolding of the ritual. These excerpts come from the daily liturgies of the mother monastery, which holds that particular branch of the tradition. Other parts, called “lore” (gzhung) are either from the root-verses which constitute the essential core or the “original” words of the purported first teacher, in this case either Stag la me 'bar, or Byams ma.

When one begins the enterprise of becoming a lineage holder, the essential part of the retreat consists of not only reciting the proper quantities of the various mantras but also of becoming proficient in the recitation of the core texts and various associated rituals. Thus, with the exception of the beginning and the concluding rites, most other miscellaneous texts and prayers to be recited are, in the task of daily recitations, not used with the exception of all the lore material. The gzhung constitutes the essential text, while all the remaining material was composed by different masters and added to the corpus. Although the lore is the essence of the practice, the other addenda are, for the scholars, the main objects of research.

The Phur nag corpus, being particularly bulky with added liturgy, makes it very complicated to recite. The ritual was expanded over time through the addition of prayers, entreaties and others miscellaneous rites unique to the

16 The gradual diminution of Bon po lamas over the centuries and the complexities of their ritual might have been a contributing factor to the emergence of New Bon. The later ones favored shorter, simpler rituals with abbreviated instructions. New Bon also came under intense criticism, not only from Buddhists but from Bon pos, for mixing heterogeneous elements from Buddhism. Many of the latter’s symbols and concepts, had by then been absorbed in the greater Tibetan religious culture and were indistinguishable from indigenous culture.
tradition of each particular lineage. Not all monasteries use the same standards in their yearly or occasional recitations. These accord with received tradition and can be abbreviated or enhanced with sacred dances (‘chams) and other grand public displays.

The canonical texts, found in private or monastic libraries – e.g., the Nine Root Tantras and the Great Commentary – are seldom if ever consulted by ritualists. Contemporary testimonials and the current situation indicate that the tradition has focused on individual training through regular communal ritual. The relative simplicity of later gter ma may be due, in part, to the ritual complexity of the Old Treasure Tradition which made learning difficult for novices and taxing to teach for Bon po masters. Monastic training in pre-PRC times started with rote memorization of the entire ritual corpus. This was followed by ritual drumming, chanting and learning to make the gtor ma. The inner aspects of the practice, such as visualizations and the exegeses attached to these, would be imparted only to a minority of committed disciples who would enter a period of retreat to perfect or acquire the lineage. This would further entitle them to have disciples, and to transmit the lineage to those who followed in the footsteps of the master. The Phur pa specialist would also be asked regularly to perform the various rituals associated with the system of his tradition mentioned above. This could have involved the performance of exorcism, subjugation of evil spirits, healing, and ritual killing (gsod pa). My observations at Ye shes monastery indicate that the latter rite would be left to higher lamas of the monastery. Monks who are involved in private ritual performance for patrons seemed to believe the regular performance of the gsod pa rite may either shorten their lifespan and/or produce negative karma. In any case, the requirements for attaining mastery of this system are such that they necessitate a long period of apprenticeship, training, and ascetic discipline which would make the lama a “tradesperson” in the realm of the Bon priesthood; that is, a professional priestly member of an institution that supplies services of a religious and cultural nature to the local or greater population at large. In fact, religious organizations in Tibet may almost be compared to guilds that created specialists and guarded trade practices and secrets. The extensive use of esoteric and secret rituals to transmit teachings is very much in line with such ideology applied to the realm of the sacred.

Ritual demands a group of specialists trained in its intricacies. Despite the general trend towards secularization in China and the Tibetan areas, the demands for ritual performance seem to continue and even to be on the rise following the liberalization of the practice of religion starting in the mid-1980s. For decades there has been a vacuum in the local religious market in the Tibetan areas of Sichuan due to the political upheavals of the Cultural Revolution and its aftermath. Monks who can fill the traditional offices have only recently been trained, thanks to the knowledge of religious elders and the concerted efforts of communities. This relatively recent renewal is in keeping with many Tibetan communities which have turned to traditional lore and organizations rather than to the national political ideology and organizations. One of the reasons for this may have to do with the relative isolation of the Tibetan regions in contrast to the Chinese (Han) populated areas. Economic development as well as the lack of infrastructure (roads,
electricity, hospital, etc.) have left the Tibetans to themselves in many regards. This may have provoked many to return to traditional systems which have proven reliable in the past, if not adaptable to the contemporary world.

Monasteries used to keep records of important visitors, of activities and of historical moments. Unfortunately, many of these chronicles were destroyed during the Cultural Revolution (1966-76). With their disappearance there vanished an important portion of the local cultural heritage. However, from the moment religious freedom manifested itself once again, elders, former heads of monasteries and some of the latter’s disciples began to rewrite their history. Some have recently been published privately, such as the *History of the Yeshe Monastery* or the *History of the Nangzhi monastery* by the late Bya ‘phur Nam mkha’ rgyal mtshan. Other historical information can be gleaned from recent government sponsored publications produced by Prefectures. They provide us with portraits of local geography, natural resources, recent history, culture, demography and society. Prefectures along the Sino-Tibetan frontiers have in the past produced local gazetteers in Chinese. Although most do not distinguish between the different schools and sects of Tibetan religions, they nevertheless provide us with important historical information, sometimes reaching far into antiquity. Contemporary archaeological reports also provide glimpses of material culture. These are particularly important for the understanding of ancient Tibetan civilization which, according to historical records, supported a system of kingship closely tied to a religious aristocracy and from which contemporary Bon claims its ancestry.

### The Black Phur pa Tradition

The Bon historical accounts of the Black Phur pa start with the story of a disciple of Ston pa gshen rab, the mythical founder of Bon. The sage Stag la me’ bar was one of two twin sons of the king Yang rgyal lha and the queen Stag za he ting of Stag gzig. One was pure-minded whereas his brother, Dha sha ghri ba, was evil. Before the birth of their twins both king and queen treated their servants very badly. One of their servants, before his death, told the couple that he would be reborn as both their sons. His good side reincarnated as Stag la and his resentful one as Dha sha. The latter soon

---

19  Renmin chubanshi is producing county gazetteers in Chinese as well as in Tibetan. Similar productions on Aba, Songpan, Jinchuan, Xinlong, Heishui and other Tibetan inhabited regions have also been published. There are also local reports on local institutions, their history and masters produced by the bureaus of Religious Affairs (zongjiao bu) in each Prefecture. These, however, are not readily available to foreign researchers since they are classified as Internal Documents (neibu).

20  For instance, Songpan has a series of five volumes on its local history. Sichuan Province has also produced a series of eleven books covering the pre-republican (1911) period and going back to the Han dynasty.
The Black Phur pa cycle of the Bon pos began to persecute his parents. He beat his mother and eventually cut off the head of his father and left home. It was said that he left for the south of Stag gzig and became wild. It was rumoured that he ate humans and threatened the country with chaos and destruction. Stag la was forced to fight his own brother. But Dha sha apparently won, leaving Stag la at a loss as to how to subdue his brother.

After learning the rituals of Phur pa from his master, ‘Chi med gtsug phud, Stag la retired to Brag phug rong can to practice. However, despite his best efforts, he was not able to contain his brother. Seeing his great distress, the goddess of compassion, Byams ma, appeared to him and explained that his compassion towards his brother was preventing him from achieving his goals. She instructed him further on the techniques of Phur pa and recommended him to cultivate a strong and arrogant frame of mind. After doing so, Stag la was able to kill his brother by magical means and “save the country and sentient beings.”

Stag la transmitted the teachings to Lha gshen Yongs su dag pa, Klu grub Ye shes snying po, and Rgyal btsan Mi lus bsam legs. They promulgated these teachings respectively in the realms of the Celestial deities, the subterranean world of the nāga, and the realm of the humans. The first disciple, Lha gshen, was born in the celestial realm and was a disciple of Gsang ba ’dus pa, a legendary master, who transmitted the teachings of one of the Bon po systems of the Great Perfection, the Zhang zhung snyan rgyud. This important system of meditation, in Bon, permits adepts to accomplish the Rainbow Body (’ja’ lus) and attain total Enlightenment, leaving no body behind.

The story of the second disciple, Klu grub, is an epic one. After first becoming a disciple to several masters, he transformed himself into a garuda and then later into a fish to seek out his destined master, Gshen lha ’od dkar. Failing to find him, he returned home to meditate. Only then did Gshen lha ’od dkar appear to him and begin to instruct him. He was told that his divine master had never been apart from him and that all the beings he encountered while travelling in the sky or in the ocean were none other than his master. He was eventually redirected to another master and later received the Black Phur pa lineage from Stag la me ‘bar.

Mi lus bsam legs was born in Rgyal dkar ba chod. He was the son of a king who had just died. His country had been condemned by a soothsayer to be taken over by a neighbouring kingdom. The population fervently prayed to the goddess of compassion mentioned above and Mi lus bsam legs was born to the queen a year later. He studied under six masters of Bon, who included Stag la me ‘bar, and eventually became the lineage holder of Phur pa and also of the important Tantric cycle of Magyud (ma rgyud).

---

21 Karmay, Treasury, xxii.
23 Karmay, Treasury, xxii-xxiii.
24 Karmay, Treasury, xxiv.
The early history of the Black Phur pa cycle is linked to another larger corpus of practices known as the Three Cycles [of the Propagation] of Chipung (ṣpyi ṣpungs skor gsun). These are teachings related to the propitiation of Wrathful Male divinities, used to subdue and control chaotic forces. The Chipung is literally the “topmost heap” (ṣpyi ṣpungs), with ṣpyi here a metaphor for “universal,” thus the “Universal heap of deities.” These are gatherings of divinities that are cosmic in character. They are believed to be able to affect “current events” in the three realms of the celestial divinities, humans and nāgas. Some other divinities, still widely worshiped by the Bon pos today, are Dbal gsas rngam pa, Khro bo Gtso mchog mkha’ ’gying, Dbal chen ge khod and Lha rgod thog pa. When all the various early teachings of male divinities (together with Phur pa) are classified together, they are also named the Five Supreme Ones of the Citadel (gsas mkhar mchog lnga). The whole collection comprises various rites involving all types of practices for controlling spirits, demons, gods, subterranean creatures and other beings of Tibet’s extensive pantheon.

The three masters mentioned above who received the teachings of Phur pa are believed to have produced their own lineages of disciples. However, they are each better known as holders of other practices, such as Ma rgyud. This may account for other divergent lineage accounts of Phur pa, since what is today prevalent in the Kangyur (K.33, K.113, K.114) and the ritual compendium I have been able to consult omit the three latter masters (i.e. Lha gshen Yongs su dag pa, Klu grub Ye shes snying po, and Rgyal btsan Mi lus bsam legs) from the supplication list (gsol bdebs) and the lineage accounts (brgyud rim). The lists usually jump directly from Stag la me ’bar to Dbal bon Kha yal me ’bar in Stag gzig. The list below concerns the early propagation of Phur pa, from different regions of Stag gzig to Kashmir, India, Nepal, Tibet, and China. At this point, it is difficult to positively identify many regions mentioned below with contemporary locations, with the exception of the general areas of Kashmir, Nepal and India. Even the ‘Grim thang area, purportedly located in China, is not yet identifiable. One can only notice the general involvement of the surrounding regions in the spread of the Phur pa tradition. Does the list imply that the teachings first spread abroad before being propagated in Tibet, or does it stress the contribution of these competing religious worlds, with the implicit understanding that the seminal teachings of all these different religious countries were extracted and put in a concise form into the Phur pa tradition, thus making it particularly potent? At this point, one can only conjecture. The various canonical lists found in ritual manuals and the histories, more mythical in nature than historical, have been compiled as follows by Shar rdza bkra shis rgyal mtshan (1859-1935) in his Legs bshad mdzod:26

Depictions of the Spread of the teachings

Transmission means: Tsa ka li

As part of the process of the propagation of the teachings, the hierophant will use ritual cards (tsa ka li) to show the appearances of the divinities and the masters of the lineage populating the divine circle (dkyil ‘khor). These cards measure roughly fifteen by twelve centimetres and are small paintings depicting the aforementioned beings and symbols. They are usually restricted to those who have been initiated into the Tantric cycle and who wish to study it. Until very recently (and it still often remains the case) these were local productions and history retold in picture form. One of the purposes of their use during the Empowerment ritual may be to suggest ways of imagining the masters of the lineage during prayers to the lamas. It also sets symbolic models for artists and painters who create thangka and other icons. For example, representations of Mnyam med Shes rab rgyal mtshan, the founder of Sman ri monastery, follow iconographic prescriptions that have become standardized. It is thanks to these standardizations that the master’s representation in paintings or statues is easily identifiable.  

I have been fortunate to be able to photograph two sets of those illustrating the Black Phur pa circle of divinities and masters and one of the Fierce Phur pa of the Three Bodies of Sangs sngags gling pa. The two sets of the Black Phur pa are from two different regions at some distance from each other. The first was photographed at the Ye shes monastery in Khams, Sichuan (in 2006), and the other at the Bon brgya monastery in A mdo, Qinghai (in 2004). Both sets illustrate similar divinities and differ only slightly with regards to the masters of the lineage. This can help us understand how this practice spread and who its principal disseminators were, and it may help to reconstruct local history, particularly when compared to written records.

The first set belongs to the younger brother of the late sprul sku, A g.yung bla ma28 (G.yung drung bstan pa’i rgyal mtshan) of Ye shes monastery, A rgyal bla ma (Skal bzang rgya mtsho, born circa 1940). It is divided into two sections: the first, named Phur pa'i lha dbang (“the empowerment of the deities of Phur pa”), is used during the initiation ritual on the Black Phur pa’s divine circles (dkyil ‘khor) of deities. It has thirty-three cards with depictions of deities and symbols. The second is numbered one to fifty-five, but the deck is missing one card and contains some unmarked ones. It portrays the lineage holders of this master. It is believed to have been made during the time of Tshul khrims mchog rgyal. The artist is unknown; however, I suspect that these tsa ka li were the products of the latter, who was an avid chronicler of the various lineages he received during his life. Behind most cards are handwritten texts to be recited while showing the cards.29 These are excerpts from the ritual texts of the initiation in the cycle of the Black Phur pa. The textual passages that accompany the cards run as follow:

1. The Perfected King Mkha’ ‘gying (rdzogs sku mkha’ ‘gying rgyal po) resides in the fierce fortress of ‘Og min. [He has a ] dark-blue body and shines majestic light; his hair curls in an ornament of black expanse; [he] brandishes in his

---

28 For his biography see Seng ge sprul sku Rig ‘dzin nyi ma. Bla ma a g.yung gi rnam thar / bla ma mchog rgyal gyi rnam thar [Biography of Lama Ayung. Biography of Lama Chogyal]. Chengdu: Sichuan xinan minzhu xueyuan chubanshe (四川西南民族学院出版社) (2003), 1-19.

29 The text behind the tsa ka li can also be found, with minor variations, in an ancillary manuscript which is part of the initiation ritual (dbang khris), entitled The Minutiae of the lineage of Phur Pa, Rosary of Mutig (phur pa’i brgyud tseg mi tig phreng ba bzhus so), RGFPhGTh folios 1523-1540. This collection of material was acquired in the Spring 2004 at Rin spungs dgon. On this monastery see Karmay et al., A Survey, 608-611. It has been reprinted locally from collected hand-written material, which bears the lineage mark of the G.yung drung gling monastery in Central Tibet. This collection has more than a hundred different texts and totals one thousand five hundred and ninety four numbered folios. An elder lama of the monastery, Aku Yako, learned this cycle at an early age. He conducted several retreats locally and in Central Tibet. After completing his studies in Shar khog, he went to G.yung drung gling Monastery in Central Tibet. See Karmay et al., A Survey, 33-36. At the onset of the Cultural Revolution, disguised as a peasant, he and another Sharwapa returned home on foot to A mdo Shar khog (Songpan Prefecture). His knowledge of this corpus is remarkable. Besides having memorized the entire ritual, he has mastered all the traditional lore of the Black Phur pa. He has passed his learning to a young master in charge of the retreat center of the monastery, Joko lama.
hand a dagger of meteorite iron whose fierce material subjugates the Five Poisons of affliction.30

2. Great Mother Compassionate Byams ma (yum chen thugs rje byams ma) sits in the expanse of E of the Blanket of Delight. Her white body emanates green majestic light with her green hair gathering and swirling around turquoises; she carries a vase of ambrosia which holds compassion for all poisoned sentient beings.31

3. The Emanated Teacher Gshen rab (sprul sku ston pa gshen rab) stands in the Canopy of Lapis of the fierce gsas palace. His blue-colored body radiates light and emanations; his hair is a topknot of lapis with a turquoise in the center.32

4. The gshen of power, the fierce Stag la me bar, resides in the fierce gsas palace in the cave of Rong chen. His body is red and blue, majestic in countenance; his hair is green and ornamented with thousands of small poisonous daggers; his body is covered with the mane of a tiger and ornamented with the hundred thousand small bells of existence; he holds high a curved iron dagger and liberates demons and devouring fiends.33

5. Kha yal me 'bar, hero of the gshen, resides at the fierce gsas palace in the Eight plains of Dbal yul.34

6. The Hero of Bon, the Shen subduer of the violent Yaksha, Dbal bon Gnod sbNyin 'dul stands in the fierce gsas palace at Tiger grove (stag tshal).

7. The Hero of Bon, 'Od dpung, the fierce and heroic gshen resides in the gsas palace in the country of the fierce gods at Dbal 'bar.35

8. The Hero of the gshen, Khyung slag, the heroic gshen stands in the fierce gsas palace at Stag rtse.

9. The Hero of Bon, Stag slag, the fierce and heroic gshen, resides in the fierce gsas palace at 'Od ma in the country of Dbal.

10. The Great Bon po of the kingdom, the Hero Kha yal me 'bar36 resides at the fierce gsas palace of Drug yul.

11. The Bon po of 'Ol, Spyan cig, hero of the gshen, dwells at the fierce gsas palace of 'Ol yul.

12. Hero of the gshen, Ti ti me slag, is in the fierce gsas palace at the mouth of Mu steg.

13. Hero of the gshen, Bram ze me 'bar is located at the fierce gsas palace of 'Thib gnon.

14. Hero of the gshen, A ka ru nag, stays in the fierce gsas palace at a cemetery in India.38

15. The heroic Lord, Lce ring, hero of the gshen, resides ... at Thang shod in Dbal yul (Nepal?)

16. ... Dbal 'bar ting gsas39 ... in Kha che.

51 RGPhGTh f. 1533. Thanks to Charles Ramble for this most probable interpretation.
52 No identifiable card. As above.
53 This entry in RGPhGTh f. 1533 is not found among the cards from Ye shes dgon. However, the following is with the number 35. For the sake on completeness I have decided to include it here.
54 RGPhGTh f. 1533.
55 RGPhGTh f. 1533 has bde for dben.
56 RGPhGTh f. 1534.
58 RGPhGTh f. 1534 omits dkar po.
59 RGPhGTh f. 1534.
60 The previous entry (44) is not to be found in the RGPhGTh. Thus, it could either indicate a bifurcation of the lineage or an error on the part of the copyist at some point. It could also indicate another name for this master. The rest of the text is identical with that of the bsa ka li 44 and a few of the previous entries.
61 RGPhGTh f. 1535.
62 Upper hermitage? RGPhGTh f. 1535 keeps phun tshogs.
63 Literally: removing illness, Sman ri medical college?
64 RGPhGTh f. 1536.
65 RGPhGTh f. 1536 has 'du gnas sman ri.
Here ends the collection of *tsa ka li* from Ye shes monastery. It does not illustrate or inform one about the later part of the lineage. For this there are fortunately other documents that supply us with the relevant information to attempt a reconstruction of the purported religious history of this branch of the Black Phur pa teachings. We will address these shortly.

**Records from the Rin spungs monastery in A mdo Shar khogs**

As for the RGPhGTh (f. 1537-1539), this provides a list that is helpful for the history of the Sman ri Black Phur pa. Thus, the manuscript continues with the following list of masters:

- She tsu drun mu, the ninth abbot of Sman ri
- Shes rab ’od zer (tenth abbot)
- G.yung drung rgyal mtshan (eleventh abbot)
- Shes rab blo gros (twelfth abbot)
- Shes rab ’od zer (thirteenth abbot)
- Gtsug phud ’od zer (fourteenth abbot)
- G.yung drung tshul khrims (fifteenth abbot)
- Rin chen ’od zer (sixteenth abbot)
- Rin chen lhun grub (seventeenth abbot)
- Shes rab bstan ’dzin (eighteenth abbot)
- Shes rab dbang rgyal (nineteenth abbot)
- G.yung drung dbang rgyal (twentieth abbot)
- Phun tshogs rnam rgyal (twenty first abbot)
- Bsdod nams blo gros (twenty second abbot)

The lineage then moves to the snowy abodes (*gangs can zhing*), to the hands of the religious regent (*rgyal tshab*), Zla ba rgyal mtshan, who passed it on to Bskal bzang nyi ma (b. 1841), the second abbot of Dpal ldan g.yung drung gling monastery (founded 1834).66 He passed it on to his successor, the third abbot Phun tshogs dbang rgyal. The manuscript jumps to the fifth abbot of G.yung drung gling, Shes rab blo ldan, who is the last individual named in this manuscript.67 This short text does not possess a colophon with the name of the author. We might conclude that this particular set was brought to A mdo Shar khog by a local monk, such as Aku Yako, directly from G.yung drung gling. It might have been written by Phun tshogs rnam rgyal himself or one of his immediate disciples. The ninth and last abbot of the monastery was Shes rab bstan pa’i rgyal mtshan (1911-1979). Although we do have the dates of ordination of the nine abbots, from the third abbot to the present one, we can estimate roughly one hundred and fifty years with six to ten generations of masters at the most. The lineage has continued through the successive abbots of Sman ri68 and to the last one of G.yung drung gling. It

---

66 RGPhGTh f.1539.
67 RGPhGTh f.1540.
68 The present Throne holder of Sman ri, Lung rtogs Bstan pa’i nyi ma (b. 1929), a native of A mdo Shar khog, is a practitioner of this lineage, which runs in his family and is attached to the Skyang tshang monastery. He therefore not only brings his own lineage back to the Sman ri tradition, thus creating a loop, but is also a member of the direct transmission of the Black Phur pa from Mnyam med Shes rab rgyal mtshan through the abbatial seat of Sman ri. On Skyang tshang monastery see Karmay et al., *A Survey*, 614-617.
spread to A mdo Shar khog and to Ye shes monastery in Nyag rong. From
Sman ri it spread to Rnga ba and Snang zhig monastery, which in turn
transmitted it further to the north and southwest of A mdo.

What seems obvious from the information detailed above is that Sman ri
may have played a central role in the formation and propagation of the
practices of the Black Phur pa cycle. As we will see below, a vast collection
of miscellaneous rites were created and added to the practice of the Black
Phur pa by the Pandits of Sman ri. Thus, we could almost suggest that
besides the basic textual lore (gzhung) which is attributed to Khu tsha zla
‘od’s discovery of the treasure texts in Bhutan, the rest of the elements used
during the performance of the full series of rites may have been mostly
Sman ri productions. This brings up the question of the role of Sman ri in the
overall formation of what is known as Bon today and the introduction of a
number of elements which may not have existed before. In this manner,
Sman ri, which portrays itself as the bastion of Bon orthodoxy, may have
played a more dynamic role, in that it may not have merely passed on the
teachings and traditions of the past to the next generations in the form that it
had received them, but rather may have contributed significantly to their
elaboration and renewal through the process of reinterpretation and editing.
Sman ri might be the central institution that restructured the overall
tradition of Bon.

In order to reconstruct the lineage transmission process from Sman ri to
G.yung drung gling to Ye shes monastery, one of the lineage holders of the
latter institution has left us his own terse account of the succession of
masters and the process of transmission. This is the object of our
investigation in the next section.

The Records of Tshul khrims mchog rgyal

In the Spring of 2006, I was fortunate to discover a handwritten account of
the Black Phur pa lineage of masters as it was transmitted to Tshul khrims
mchog rgyal (alias G.yung drung mchog rgyal), a master of Ye shes dgon pa
in Khams and an important disciple of Shar rdza Bkra shis rgyal mtshan.
The original manuscripts (YDTshGPhPNPGRm69) were most likely written
by his own hand or that of his associate, Pad ma blo gros.70 It is part of a
larger corpus of memoirs that recorded all the empowerments (dbang),
scriptural transmissions (lung) and instructions (khrid) that the former
received. His lists of transmission lineages are extensive. They provide
details organized along the Tantric cycles (rgyud skor) he received, such as
Phur pa nag po, Rta mgrim, Dbal gsas, and a host of others. It details the
various texts within the corpus that are transmitted separately along the

---

69  YDTshGPhPNPGRm, my own provisional title for g.yung drung mchog rgyal phur pa nag
   po'i bryud rim.

70  I received this information from a monk at Ye shes dgon, G.yung drung bstan ‘dzin (alias
    Stag bon, pronounced Tabei in the local dialect), Spring 2006. Tabei has written a short
    biography of Padma blo gros, which has not been published yet, entitled: Be ro'i thugs
    sprul rje btsun padma blo gros kyi mdzad rnam mdo bsus gsal ba'i me long bzhugs (2007). See
    also Achard, Enlightened Rainbows: 41, 43, 62, and passim.
traditional lines of empowerment, scriptural transmission, and instruction. Those for the Phur pa cycle are texts such as the Great Pledge (mta' chen), the Tiger’s Cloak (stag gon), which are preliminary rituals, and other sections of the corpus. These accounts were written on handmade paper measuring roughly six centimeters by twenty-nine centimeters. There are different sections to the manuscript, which comprises nine folios along with another folio detailing the lineage of the empowerment and the long life rituals (tshe sgrub) of Phur pa. Both sets of documents are concluded with the author’s name. The narration is rather concise, just enough to record names, sometimes the location, texts and ritual cycles. It does not elaborate on the life of the master or give dates. Nevertheless it provides us with valuable information on lineage transmission and also offers a short glimpse of its history.

Tshul khrims mchog rgyal begins this Dbal phur pa nag po section by detailing the various components of this yi dam’s corpus of key texts. The author begins by identifying the principal written sources (dpe rtso) of the corpus. Those are the Great Pledge (gta’ chen)\(^71\), the “Celestial Line” (gnam thig), the Short Verbal Transmission (shog chung), the Four Notes (tho bzhi), and the Tiger’s Cloak (stag gon).

The following texts are part of the corpus as received by the author and appear to constitute the traditional elements for ritual purposes. These are to be found in the corpus of phur nag sgrub thabs (Ye shes dgon pa’i phur nag sgrub thabs, YG PhNGTh) as used at Ye shes dgon in Nyag rong.

Core texts of the Black Phur pa transmission are:

- The Great Pledge, the unravelling of the extensive array and the steering Four Notes (gta’ chen bkod pa rgyas ba bkrol ba tho bzhi bskyod) (f. 5-15).
- The general points in regards to the Profound Perfection of the 25 lore (gting rdzogs kyi spyi don nyi shu rtsa Inga’i gzhung) (76-162).
- The purification of the Peaceful deities and mothers, the accomplishment of the root of the Great Sphere (zhi ba ma sang dbyings chen rtsa ba’i bsgrub pa) (65-75)

Our author proceeds to list other parts of the ritual texts under general headings, some of which correspond to the titles of booklets titles and others to sections within a great volume. The following headings which, for most of them, speak to their functions, include: Refuge (skyabs ’gro, 88-89); Prayers (gsol ’debs, 90-93); Prostrations to the masters of the lineage (brgyud phyag); Miscellanea for the feast offering (tshogs kyi cha lag); The sprinkling of the Feast offerings; Correcting the essential points (gnad bskang, 142-162); Humans and demons (mi bdu); Offerings of the remaining gtor ma (lhaq ma); The thousand recitations that are emanating magic (bsnyen pa’i stong ’dzab ’phro); The thousand recitations that are the praises of magic (bsnyen pa’i stong ’dzab kyi bstod pa); The mirror of purification (gsal byed me long); Exhortations of the hundred and eight underlings (las mkhan brgya rtsa brgyud kyi bskyul pa, 214-278); Dissolution of the hundred and [eight] underlings (las mkhan brgya rtsa bskyul ma).

Exhortations of the six guardians of treasures (gter bdag drug gi bskyul pa); The practice of raising the oppressive [power] of the nails (gzer gnon bro yi las

The Black Phur pa cycle of the Bon pos

187

byang); The everlasting circle of long life (tshe grub g.yung drung ’khyil pa, 287-304); Collecting prognosis (phya tshe bsdu ma, 305-316); Countering the various weapons (bzlog pa las kyi mdel rnams); The purification of the group of countering weapons (bzlog mdel ’gres byang shog pa); The exorcism of the point of the thousand daggers (phur bu stong gi rtse bzlog); The exorcism of the falcon-wolves (? , khra spyang gi bzlog pa, 317-351); Purification of the demons of the falcon-wolves (khra spyang gi ’gres byang shog gcig); The exorcism of the calamities among humans and animals [inflicted] by the army of curses of the [demonic] underlings (las mkhan byad kha dmag ltas mi phyugs yams bzlog, 352-363); Instructions on the actions of enduring (mnag pa las bya gi man ngag, 381-389); and The lamp on the practice manual of memory (brnag pa las kyi byang bu’i sgron ma, 390-487).

The author further cites a certain Pad sprul who, in his collected injunctions, added that following the end of the exorcism (bzlog) and the erecting of the mdos (YG PhNGTh 299-316), the expelled infected substances (ram sgo dbyed) should be burned in a burnt offering (sbyin sreg).

These texts correspond to a certain degree to the various components that comprise the lore of Phur nag. The central text of this cycle is the Great Ritual of the Black Phur pa (Phur nag bsgrub chen). It is considered the original text excavated by Khu tsa and is generally referred to as the lore (gzhung). When a practitioner of Black Phur pa wants to conduct daily recitations of this cycle, it is generally the lore sections that are deemed essential to recite. The Phur nag has twenty-five lore or twenty-five methods or sequences. These are made of ritual sections such as requesting blessings from the masters of the lineages, the construction of the circle of deities, the recitation of mantras, etc. For lack of space, this will be treated in future articles on the Bon Phur pa. However, this also points to the very composite nature of the Phur nag tradition. It demonstrates how what is now considered a complete corpus of texts was also understood as a collation of diverse material all relating to the central deity, Phur pa.

Tshul khrims mchog rgyal, in the record of his Phur nag lineage, does not elaborate further either on the content of these manuals or on the rationale of the practices involved. He pursues his terse narration directly, without any introduction, with the names and places of the masters of the lineage. Although very similar in most cases, his records include a few more masters than the initiation text. Also, he clearly states that the following list is for the transmission of the aforementioned titles and rites.

The list of Tshul khrims mchog rgyal begins with the vast expanse of the Sphere of Suchness (bon nyid dbyings kyi klong). Then in the fortress of the pure land where ‘Og min is displayed and where the king of the gods (lha), Mkha’ ‘gying, dwells as the Teacher of the Sphere (dbyings) in his perfected body of enjoyment (long spyod rdzogs pa’i sku). The lineage is moved to the fortress of Brum E in the Sphere of the Great Bending Backward (dgyed pa Chen po’i dbyings), where the Great Mother Byams ma showers blessings (byin rlbs) of compassion from her citadel (gsas) of turquoise flooring in her Tent

72 I cannot identify which reincarnation of the Smon rgyal lineage it is. Maybe Bstan ‘dzin ngyi ma bzang po. See Achard, Enlightened Rainbows, 59.
73 YDTshGPhPNPGm f.2.
74 YDTshGPhPNPGm f. 2.
of Harmony (mthun gur), and teaches. Then she transmits the teachings (bshad) to the Teacher Gshen rab mi bo, in his emanation body (sprul sku) shining like a peacock feather (rma lo mdangs ldan du).

After writing all the names of the first mythical lineage holders and after mentioning how the lineage went to China with Bon po Dbal bon ‘bar lha gsas in Mthing ‘brang in China, he went to teach the bon po of Bod (i.e. Tibet), Gsas mkhar me ‘bar, at Lha’i thang in Yak yul.

At this point Tshul khrims mchog rgyal writes: “These quintessential learned ones were concerned about the disappearance of scholars and knowledge [of Bon] in Central Tibet.” He further points out that these very texts mentioned above were transmitted through the lineage to the great soul (bla chen), Dran pa nam mkha’. He continues by mentioning that in those days, the reigning monarch and other great souls had poisoned minds and this is why G.yung drung bon fell. Dran pa nam mkha’ was concerned for the survival of the tradition. He divided the collection of texts into three groups, those concerning the transmissions [of the tantras] (brgyud), the commentaries (’grel) and the root-texts in accordance with scriptural transmission (lung), meaning (don) and increasing activities (rgyas pa). The first divisions of the Tantra comprise: the Nine Tantras, the commentary making the Tenth, the three methods (thabs), the four injuries (gnod), and the five keepings (’chang).

The second division was made of: the six topics (don), the twenty-one small meditations (sgrubs), together with sharp instruction (man ngag rno), and the nine bitternesses (kha tsha dgu), together mixed with counterfeit (ma grub) material.

The third division was made of: the cycle of miscellaneous rites (’phrin las), essentials derived from experience (nyams su blang ba thig) and small commentaries (’grel chung). Also included were the three purifying actions of the miscellaneous rites (phrin las las byang gsum), the two root commentaries (rtsa ’grel pa gnyis), and the three circles (’khor lo gsum). Added to that were the three exorcisms (zlogs pa gsum) together with the three applications (las sbyor gsum).

Furthermore the essential instruction for mdos were also concealed together with four small rituals from the cycle of the meaning, the five ornaments of light, the four scriptures (lung), the four instructions (man ngag), four rituals (thabs), the nine conditions (cha rkyen dgu), and six texts from the hidden precepts class.76

This list of texts purports to represent what was believed, during the time of the author, to be the complete transmission of Black Phur pa received by Dran pa nam mkha’ during the time of Khri Strong Ide btsan. A son of the king, Mu thig (Mu thug according to Shar rdza pa)77, together with the bon po from Khyung po, Gyer zla med, concealed the texts at Spa gro phug gcal.78

Many of the names and titles do not refer to actual separate pieces of writings as explained above. They may refer to a wide variety of sources, methods, commentaries and techniques. Although their titles appear to hint at the arsenal of war magic, that is exorcism, the hurling of magical weapons

75 YDTshGPhPNPGRm f. 3.
76 YDTshGPhPNPGRm f. 3b.
77 Karmay, Treasury, 102-103.
78 Ibidem.
and the use of other similar implements, some allude to hosts of deities, pith instructions, and so forth. The exact nature of all this remains to be investigated and will be taken up in a later study.

The text continues with the transmission of the more readily identifiable names and places. This would then constitute the later propagation in our historical age.

Khu tsha zla 'od (alias Lha rje) rediscovered a number of texts at Spa gro phug gcal in Bhutan, such as the Sha dbal nag po klong gsas rgyud, five root tantras, the Rgya mdud ‘khyil pa mkhya’(?), and others. These texts of the Black Phur pa cycle in three sections were eventually appropriated by Mgar 'Bum chung and his son Mgar ston Khro rgyal. These were passed to the Me family members, Me ston Tshul khrims stag; then to Me ston Shes rab bdud rtsi; to Me sgom Khyung tum; Me ston Rgyal mtshan ‘od zer; Me ston Ra lcam; Me ston Zhi ba ngang Idan; ‘Grom chen Blo gros rgyal mtshan and Me ston Ye shes rgyal mtshan, then to Mkhas grub Kun bzang rgyal mtshan.

The latter transmitted the lineage to the founder of Sman ri, Mnyam med chen po Shes rab rgyal mtshan. The transmission lineage of Tshul khrims mchog rgyal follows the same as those previously seen from the tsa ka li: that is, from the founder of Sman ri, it passes to the second abbot, Ston pa Rin chen rgyal mtshan. From him, it was transmitted to his successor Nam mkha’ ye shes, then to Mkhas grub Kun bzang rgyal mtshan, to Rang shar Rin chen rgyal mtshan, and then to Mtshan ldan Tshul khrims rgyal mtshan (sixth abbot). The text here is marked with the sign of the Three Jewels or three small circles arranged in a triangle. It also denotes a change in the transmission which does not continue along the lineage of either Sman ri or G.yung drung gling.

Thus, from Sman ri Tshul khrims rgyal mtshan, it passes to Shes rab blo gros, then to Bru Nam mkha’i g.yung drung, to Rin chen rnam rgyal, and to Kun mdun rin chen lhun grub. The latter passed it to ‘Gar bla ma G.yung drung rgyal mtshan who then passed it to Skam bla ma Lha bu, to Sga ring G.yung drung gtsug phud, to Skam bla ma G.yung drung ngyi ma rgyal mtshan, to Mkha’ chen Nyi ma bstan ‘dzin, to U ti bla ma ‘Rnam dag tshul khrims, to Rgyal rong Bsod nams rgyal mtshan, to another Rgya rong pa, Ha ra wer zhi, to Rtogs ldan Bsod nams rgyal mtshan, to Rtogs ldan Lha rgyal bkra shis, to Drongs Tshul khrims rnam dag, to the second Drongs Bkra shis rgyal mtshan, better known as Shar rdza rin po che, then to the author, Tshul khrims mchog rgyal.

The author further adds another lineage transmission of the same above which he received and derived from Sme ston Zhi ba ngang Idan (mentioned above), who passed the teachings to ‘Gron ston Blo gros rgyal.

---

79  YDTshGPhPNPGRm f. 4-4b.
80  YDTshGPhPNPGRm f. 5.
81  This abbot is mentioned on the stele of the Bon po monastery of G.yung drung lha steng (f. 1046) which was reconstructed between 1766 and 1768 before being destroyed by the Chinese army in 1778 and converted into a Dge lugs monastery. Karmay et al., A Survey, 556. He was a contemporary of Kun grol grags pa (b. 1700) and was the monk who ordained the forty-fourth king of Chu chen in Rgyal rong, Nam mkha’ rgyal po. Karmay, Feast, 52, 130.
82  YDTshGPhPNPGRm f. 5b.
mtshan. He in turn taught Bru ston 'Dul ba rgyal mtshan, and the lineage passed to Bru btsun Rgyal ba g.yung drung, to Rnog ldan Nam mkha’ ‘od zer, to Mtha’ bral Bsdoms nams rgyal mtshan, to Mthangs med Bsdom nams blo gros, to Nam mkha’ bsdom nams, to Tshe dbang rgyal mtshan, to Rnal ma ka ra, to Mkhals grub Rin chen blo gros, to Mnyam med Shes rab rgyal mtshan, to Rgyal tshabs Rin chen rgyal mtshan, to Kun bzang rgyal mtshan, to She tsu drung mu, to Bstan ‘dzin rgyal mtshan, to G.yung drung rgyal mtshan, to Shes rab blo gros, to Sku mdun Shes rab ‘od zer, to Drom ‘od zer rgyal mtshan. This is one transmission.

This ‘Od zer rgyal mtshan transmitted the teachings to Bru Nam mkha g.yung drung, then it passed to Bru ston Rin chen rnam dag, to Mkhan chen Rin chen rnam rgyal, to Gar bla ma G.yung drung rgyal mtshan, to Skam bla ma Mkhyn rab nyi ma’i snying po, to Bla ma G.yung drung gtsug phud, to Skam bla ma G.yung drung nyi rgyal, to U ri bla ma Rnam dag tshul khrims, to Rgyal rong Bsdom nams mchog rgyal, to Bla ma Ye shes rgyal mtshan, to Rnog ldan Lha rgyal bkra shis, to Tshul krim rnam dag, who passed it to Drong Bkra shis and to Tshul krim mchog rgyal.

A third alternative transmission noted is that of the Yang gzhung rkyang rgyud rim, an unidentified text or set of teachings that may have been part of oral lore and put down into writing by Mkhan chen Rin chen lhun grub (the seventeenth abbot of Sman ri as above), who began to transmit it to She rab bstan ‘dzin (eighteenth abbot), and it was passed to She rab dbang rgyal (nineteenth abbot), to Grub rgyal ba ‘od zer, to Rab byams Bstan ‘dzin rgyal mtshan, to Rme’u Tshul khrims dbang rgyal, to Skam bla ma G.yung drung nyi rgyal, to Mkhan chen Nyi ma bstan ’dzin, to Drongs Rnam dag tshul khrims, to Rnog ldan Lha rgyal bkra shis, to Drongs Tshul krim rnam dag, to Drongs Bkra shis rgyal and finally to our author.

Alternative lineages are not uncommon in these transmission lineages and when the characters are identifiable, they help us to understand better the movements of these sets of religious practices.

Other separate transmissions are those of the Peaceful deity (zhi ba) rite for protection, exorcism, killing (bsrung, bzlog, bsad pa) also part of the Phur nag corpus. The transmission started through Sku mdun Shes rab ‘od zer (the tenth abbot of Sman ri), who passed it to Bru Nam mkha’ g.yung drung, to Bru G.yung drung phun tshog, to Sprul sku Shes rab phun tshog, to Rnog ldan Blo gros grags pa, to G.yung drung rgyal mtshan, to Shes rab dbang rgyal, to Rgyal ba ‘od zer, to Bstan ‘dzin rgyal mtshan, to Mkhan Bsdom nams blo gros, to Drongs Bzod pa rgyal mtshan, to Mkhan Nyi ma bstan ’dzin, to Drongs Rnam dag tshul khrims, to Rgyal rong Bsdom nams rgyal mtshan, to Rgyal rong Ye shes rgyal mtshan, to Lha rgyal bkra shis and Tshul khrims rnam dag. The latter transmitted it to Rong Bkra shis rgyal mtshan, then to the author.

The methods of the Tantra of the Lamp which Illuminate the Tradition of Dpal phur (Dpal phur phyag bzes snang gsal sgron ma’i rgyud) are those concerning the arrangement of the offerings and of the ritual implements “in the manner of Rgyal ba Mnyam med rin po che” (i.e. Shes rab rgyal mtshan). These were transmitted from Mkhan chen Shes rab dgongs rgyal (twenty-second abbot of Sman ri) to Sum ldan bzod pa rgyal mtshan, then to Mkhan chen Nyi ma bstan ‘dzin, to Drongs Rnam dag tshul khrims, to Rgyal rong

83  YDTPshGPhPNPGrm f. 6.
84  YDTPshGPhPNPGrm f. 6b.
The Black Phur pa cycle of the Bon pos

Bsdod nams rgyal mtshan, to bla ma Ye shes rgyal mtshan, to Rtog s ldan Lha rgyal bkra shis and Tshul khrims rnam dag. The latter transmitted it to Shar rdza pa Bkra shis rgyal mtshan, the master of our author.85

The root sadhana (rtsa sgrub thabs) of Dbal phur is described as having been transmitted from Mkhan chen Tshul khrims rgyal mtshan (the sixth abbot of sman ri) to Bsdod nams Ye shes (seventh abbot), to Bsdod nams G.yung drung (eighth abbot), to Phun tshogs drung mu, to Bstan ‘dzin rgyal mtshan, to G.yung drung rgyal mtshan, to Shes rab ‘od zer, to Bru Nam mkha’ G.yung drung, to Rin chen ‘od zer, to Bstan ma(?) rgyal mtshan, to Kun dga’ phun tshogs, to Tshe dbang lhun grub phun tshogs, to Bstan pa dbang rgyal, to Rtog s ldan G.yung drung phun tshogs, to Dbon sprul Ye shes bstan ‘dzin86, to Rab bla G.yung drung bon bstan, to Dge sbyang Pad ma blo gros, and to the author. Hence, the root-text tradition must have implied that the lineage comes from Mnyam med Shes rab rgyal mtshan, and only mentions its start, like the other aforementioned sources, from a later Sman ri associated figure to highlight where it separated from that institution. In the case of the root-text, it must be so understood. However, for miscellaneous sources, it might or might not imply similar antiquity. It may suggest that the first person in the lineage is either the creator for that particular section or that he was the first known link to an otherwise oral tradition of uncertain antiquity.

The lineage of masters for the Dbal phur zhi ba gser mig G.yu spras sam gser gyis yong zhun and the Dbal phur ‘phrin las srog len gyis rim gyis bryyud begins with Kun grol Nam mkha’ grags pa87 and continues with Rtgos ldan Shes rab G.yung drung (most likely the same abbot from Rgyal rong mentioned above), and with Sum ldan Bkra shis rgyal mtshan (Shar rdza rin po che) who transmitted it to Tshul khrims mchog rgyal. This definitely points to a New Bon influence introduced into the Phur nag tradition of Nyag rong. However, this needs to be further researched and assessed.

The corpus of the Dbal phur ‘bar gnog rin chen gter mdzad (mdzad?) rtsi rgya dang rgyud rim and its associated texts on petitions to the masters, the sequences of the apparitions of members of the divine circle (dkyil ‘khor), miscellaneous ritual practices associated with the protector Me ri,88 refuge and request,89 directives on initiation ritual, on conciliation (rgyud skang) with the spiritual guests, secret rites (gsang sgrub) and a host of other related practices such as exorcisms (bzlog), belonging to both the Black Phur pa cycle and other Phur pa traditions, among others, were transmitted to our author from Drongs Bkra shis rgyal mtshan (Shar rdza rin po che) as above. It does not stipulate how far back these come from or whether they were initiated by his master or not.

85  YDTshGPhPNPGm f. 7.
86  YDTshGPhPNPGm f. 7b.
87  “Nam mkha’ grags pa is the 5th Kun grol incarnation. His gter ston name was bDud ‘dul gling pa and he was a direct master of Shadra Rinpoche. Nam mkha’ grags pa is his incarnation name in the Kun grol line of sprul sku.” Thanks to Jean-Luc Achard for these precisions and corrections.
89  YDTshGPhPNPGm f. 8.
The last section concludes with the transmission records of another cycle of practice, the Me ri snying thig.90

Another very short document, handwritten by Tshul khrims mchog rgyal, records the transmission lineage of the empowerment rite (dbang) and long life (tshe sgrub) rituals. It begins with Mnyam med Shes rab rgyal mtshan, and passes to Rin chen rgyal mtshan, then to Nam mkha’ ye shes, to Kun bzang rgyal mtshan, to Mnyam med bkra shis rgyal mtshan, to Shes rab rin chen, to Blo gros ‘od zer, to Lhun grub dbang gi rgyal mtshan, to Zhu Yas rgyal grags pa, to Drang srong Bstan pa’ od zer, to Phun tshogs grags pa, to Shes rab blo gros, to Rgyal mtshan tshul khrims, to Grags pa rgyal mtshan, to Bsod nams tshe dbang, to Kun bzang lhhun grub, to Mchog sprul G.yung drung phun tshogs, to Zhu Bstan ‘dzin lha rgyal, to Zhu btsun (f. 1b) rgyal grags pa, to Sku mdun Bsod nams blo gros, to G.yung drung bstan dbang, to Smon btsun Bstan ‘dzin tshul khrims91 and Rgyal ba lhun grub, to Smon sprul Ye shes bstan ‘dzin, Rab bla Rin chen rnam rgyal, to Dbal khyung bon gter (ston)92 Tshul khrims mchog rgyal. Its line is orthodox in that it originates with the founder of Sman ri Shes rab rgyal mtshan; however, some masters of the Smon rgyal monastery were also well known proponents of New Bon teachings. This also shows that, as explained previously in the case of Ye shes monastery, the institution of transmitting both systems, the Old gter ma and the New gter ma teachings, was already established early on in the Kham region.

The Tsa ka li of Dbal phur from Bon brgya Monastery

In the Spring of 2004, I was able to accompany a friend, a lay tantric lama, to visit his master, A lag bon brgya, at his monastery in Reb gong (Tongren Xian) in Amdo (Qinghai). While visiting this Bon po scholar, he generously offered me his assistance for my research on Phur pa. I was able to photograph not only paintings and statues in his monastery, but also a deck of tsa ka li. The first part is the set of the masters of the lineage (bla ma brgyud rim) comprises seventy one cards. From the successor to Mnyam med Shes rab rgyal mtshan to the last card, there are twenty four masters depicted in this set. Since the first forty seven masters’ identity, from Stag la me ‘bar to Mnyam med bla ma, are the same, I will not restate them. However, the

90 YDTshGPhPNPGRm f. 8. Me ri gyad phur gyi sgrub pa nyams len snying thig is in the Bon gyi brten ‘gyur chen mo, 2nd ed., vol. 22, pp. 731-735. It has been translated into English by Kurt Keutzer with Ponlop Trinley Nyima as: An Essential Heart Practice for Accomplishing Me Ri Gyad Phur. Privately published, non dated (text not seen by myself). Thanks again to Jean-Luc Achard for these informations.
91 Smon btsun bSTan ‘dzin tshul khrims was a disciple of Tshe dbang ‘gyur med, the son of bDe chen gling pa (1833-1893). He was himself a gter ston and was then named gTer gsas rin po che bSTan ‘dzin tshul khrims. He came to meet Shardza one year before the latter’s ‘ja’ lus and received from him teachings on the bKa’ lung rgya mtsho (and most certainly other instructions). He was an important lineage holder of bDe chen gling pa’s treasures in sDe dge and he also worked with Khyung-sprul g.Yung drung mchog dbang. Both were indeed important New Bon lineage holders. Thanks to Jean-Luc Achard for these informations.
92 Tshul khrims mchog rgyal was definitely a monk of Ye shes monastery. It is interesting to find here this self-ascribed designation of a Treasure-text discoverer associated with the Dbal khyung monastery of Gsang sngags gling pa. Both the latter and Shar rdza rin po che were close friends and visited each other. Since the former was very active in Nyag rong it is not surprising that our author received many transmissions from him.
followers in the footsteps of the founder of Sman ri provides us with the history of how the Black Phur pa tradition may have made its way to Reb gong. The list of these miniature paintings goes as follow:

47. Mnyam med Shes rab rgyal mtshan, founder of Sman ri in 1405
48. Rin chen rgyal mtshan (second abbot)
49. Nam mkha’ ye shes (third abbot)
50. Kun bzang rgyal mtshan (fourth abbot)
51. Rin chen rgyal mtshan (fifth abbot)
52. Tshul khrims rgyal mtshan (sixth abbot)
53. Bsdod nams ye shes (seventh abbot)
54. Bsdod nams g.yung drung (eighth abbot)
55. She tsu drung mu (ninth abbot)
56. Bsam bstan rgyal mtshan (tenth abbot)
57. G.yung drung rgyal mtshan (eleventh abbot)
58. Shes rab blo gros (twelfth abbot)
59. Shes rab ‘od zer (thirteenth abbot)
60. G.tsug phud ‘od zer (fourteenth abbot)
61. G.yung drung tshul khrims (fifteenth abbot)
62. Rin chen ‘od zer (sixteenth abbot)
63. Rin chen lhun grub (seventeenth abbot)
64. Shes rab bsTan ’dzin (eighteenth abbot)
65. Shes rab dbang rgyal (nineteenth abbot)
66. G.yung drung dbang rgyal (twentieth abbot)
67. Phun tshogs rnam rgyal (twenty-first abbot)
68. Bsdod nams blo gros (twenty-second abbot)
69. Zla ba rgyal mtshan (first abbot of G.yung drung lling)
70. Bstan pa’i nlyi ma (sixth abbot of G.yung drung lling)
71. The latter taught [Bon brgya] Phun tshogs dbang rgyal, who brought a period of prosperity to the Bon brgya temple. His home institution was called Rgyal mtshan kun gling. It is not certain whether this refers to the temple in Reb gong.

The seventy-second card is reserved for one’s root-master (*rtsa ba’i bla ma*).

As these records show, this tradition stems directly from Sman ri via G.yung drung lling. It involves ritual procedures, recitation, drumming, chanting, and dances (which are not regularly performed in Reb gong), as well as meditative directions, which should be in conformity with the Sman ri tradition. If we were to rely only on this information, we might easily conclude that this Black Phur pa tradition is either quite recent in Reb gong, or that its lineage has been renewed every generation through Reb gong’s students who in turn re-established the transmission every generation, or that this set, which consists of photographs and is not an original local production, is only partly representative. In fact, after speaking with Bon brgya rin po che at the eleventh conference of the IATS, the last probability was confirmed. In fact, Bon brgya rin po che has two lineages of Phur nag, both stemming from Sman ri by different routes.

---

The first starts with Shes rab dgong rgyal (alias Bsod nams blo gros), the abbot of Sman ri, who transmitted the lineage to an A mdo ba by the name of G.yung drung shes rab. He in turn taught Rtsi zhig chos rje, who in turn passed it to Rgyal ba tshul khrims, then to Bon brgya Rang shar rig brol (grol?), to Bon brgya G.yung drung phun tshogs, to Bon brgya Nam mkha’ rgyal mtshan, then to the contemporary master Bon brgya Dge legs lhun grub rgyal mtshan.94

The other transmission begins again with Shes rab dgong rgyal (alias Bsod nams blo gros), and continues with Skyang sprul Nam mkha’ rgyal mtshan, who was invited to be the head of the Skyang tshang monastery in Zung chu (Songpan) in 1828.95 His lineage was passed on to Snang ston Zla ba rgyal mtshan (a teacher of Snang zhig monastery in Rnga ba) and then to Bstan ’dzin g.yung drung dbang rgyal, Lung rtogs skal bzang rgyal mtshan, and Bon brgya Lhun grub rgyal mtshan, concluding with the present master Bon brgya Dge legs lhun grub rgyal mtshan.

The Snang zhig dgon chen’s Transmission

Snang zhig monastery,96 is the largest Bonpo institution in the world. It is located in the northern part of Sichuan and has over eight hundred monks. It is the major academic institution within the borders of the PRC for Bon pos and possesses two schools for ritual practice (sgrub gwra) and Bon teachings (bshad gwra). Since its reopening in the late 1980s, it has taken on the role of training monks and educating them through a curriculum culminating with the dge bshes degree. In this function, it has replaced the traditional roles Sman ri and G.yung drung gling in Central Tibet used to play in the past. Its lineage is therefore central to the dissemination of Bon teachings in all the regions of China and abroad.97 It was established in 1108 in the Rnga ba valley, and its first master was Do ’phags chen po or Snang zhig Yon tan rgyal mtshan.98 The masters of the monastery follow the tradition of the Old gter ma practices and do not indulge in or teach the Bon gsar systems. Its lineage relies heavily on the Sman ri traditions, from which it claims its pedigree. In the past, its masters established satellite institutions in the region of A mdo Shar khog, which is presently the only prefecture in Tibetan territories with a Bon po population outnumbering the Tibetan Buddhists. Distant monasteries in Khams, Amdo and Central Tibet send their monks to Snang zhig to study. As previously mentioned, the transmission of lineage is

94 Bon brgya Dge legs lhun grub rgyal mtshan is the sprul sku of G.yung drung phun tshogs gling while Bon brgya Nam mkha’ rgyal mtshan was the sprul sku of Rang shar rig grel (grol?). Personal communication August 27, 2006.
95 Karmay et al., A Survey, 615.
97 Snang zhig monastery now has scholars living outside the frontiers of the PRC, for example in Canada (Dge bshes G.yung drung in the Comox Valley in the Vancouver area) and is consequently spreading its lineages and teachings around the world. See Des Jardins, J.F. Marc. “Tibetan religions in British Columbia.” Asian Religions in British Columbia. Edited by Daniel Overmyer and Larry de Vries. Vancouver: The University of British Columbia Press, 2009.
98 Karmay et al., A Survey, 527-532.
part of the curriculum of all monasteries, and in participating in these activities, the monk-students bring back this institution’s lineages and ritual methods. Its importance, therefore, cannot be underestimated.

The Black Phur pa lineage remains to be investigated in more detail. There are at least three distinct and related lines of succession of the teachings in this establishment. These are the Bya ’phur, the Rgya ’obs and the Snang zhig sprul sku lineages. In addition, the lineages of recognized sprul sku are further complicated by the bla brgyud system which automatically makes every male member of the extended family an incarnation. The Snang zhig family, which produces the leaders of the monastery (dgon bdag), no doubt possesses a number of convergent and alternative lineages of Phur nag. The current Snang zhig sprul sku, Bskal bzang blo gros rgya mtsho, is the thirty-ninth generation to occupy the throne of the institution, and practices Phur nag as his personal tutelary deity (yi dam). Personal experience in the study of Bon lineages makes me believe that most Bon po families carry a family yi dam and that this practice, when not abandoned, has continued through the generations to the present.99 The personal yi dam of most monks is often that which has been worshipped in their home. The continuity of the practices entails the blessings of past generations and lends a spiritual boost believed to help in miscellaneous rites associated with the deity and progress along the path to Enlightenment.

The representative masters (rgyal tshab) of Snang zhig for the Black Phur pa are currently held by the Snang zhig and Rgya ’obs sprul sku, or represented by the mkhan po of their meditation school (sgrub grwa). The short lineage of the Rgyal ’obs starts with Sman ri as its source and was established quite late under the thirty-fourth abbot of Snang zhig.

1. Nam mkha’ blo gros (b. 1891, a rgyal tshab of Sman ri)
2. Snang ston Blo gros thogs med (thirty-fourth abbot of Snang zhig)
3. Snang zhig Bstan pa’i rgyal (thirty-fifth abbot)
4. Rgya ’obs Bstan pa’i rgyal (rgyal tshab)
5. Snang ston Nam mkha’ blo gros (thirty-seventh abbot)
6. Rgya ’obs Sangs gyas bstan’dzin (rgyal tshab)
7. Rgya ’obs Bstan ’dzin dbang rgyal (b. 1928)
8. Mkhan po Bstan ’dzin phun tshogs (b. 1965), a former abbot of the sgrub grwa of Snang zhig, schooled at the New Menri monastery in Dolanji (India) and installed (in the early 2000s).

Phur pa in A mdo Shar khog

In the spring of 1992, I was very fortunate to acquire inadvertently a handwritten manuscript of the sādhanā of Phur nag. This local production, beautifully written, possesses a short list of the masters of this area. It has not been possible to identify which monastery they were attached to. There

99 Snang zhig monastery counts 717 families that have been attached to it for many generation. Karmay et al., A Survey, 530-531.
are twelve monastic institutions in the Shar khog area and a number of attached retreat centers (sgrub gwa) and village temples (lha khang).100

This unique local production contains a host of smaller ritual texts, common to other phur nag sgrub skor (PhNGrThKh). There are lists of lineage masters in two sections. The first, the brgyud phug or “Prostrations to [masters of] the lineage,” lists the names without specifying the location of their tenure. The second, brgyud ’debs or “lineage entreaties”, specifies the location of the masters which are all the same as mentioned in previous works. The text of the PhNGrThKh begins with:

1. Rdzogs sku Mkha’ ‘gying,
2. The Great Mother Byams ma,
3. Sprul sku Ston pa gshen rab,
4. Kha yal me ‘bar,
5. Drag po gnod sbyin ‘dul,
6. Dbal chen ‘od,
7. ’Od dpung,
8. Khyung slag can,
9. Stag la,
10. Dru gu me ‘bar,
11. ’Ol ldan mig jig,
12. Ti ti me slag,
13. Bram ze me ‘bar,
14. A ka ru nag,
15. Tsen tsen lce ring,
16. Dbal ‘bar Ti gsas,
17. Li bon sprungs rgyugs,
18. Zhang zhung ting gsas,
19. Smra bon lha sras,
20. Kha ‘byams drag po,
21. Dbal ‘bar lha gsas,
22. Gsas mkhar me ‘bar,
23. Gyer spungs dran pa,
24. Dbal bon gshen rnam (the Heroic bon gshen),
25. Khu tsa zla ‘od,
26. Mgar ston khro rgyal,
27. bla ma Bru sha Khyung gi rgyal mtshan,
28. Tshul khrims stag,
29. Shes rab bdud rtsi,
30. Me sgom khyung tum,
31. Me ston rgyal mtshan,
32. Me ston ra lcam,
33. Zhi ba ngang slidan,
34. ’Gro mgon blo gros,
35. ’Dul ba rgyal mtshan,
36. Mkhas bsun rgyal ba,
37. Rtog ldan nam ‘od,
38. Mtha’ bral bsod rgyal (Dben sa monastery),
39. Mtshungs med bsod blo,
40. Mkhas grub nam bsod,
41. Sprul sku tshe ldan,
42. Mkhas bsun nam rin,
43. Rnam rgyal ka ra,

---

100 Karmay et al, A Survey, 605-635.
There are a few old monks in the Songpan area who studied at G.yung-drung gling in their youth. One such master is Aku Yakho of Rin spungs monastery. His yi dam is Phur nag and he has practiced it since he was a very young monk. He knows the main text of the ritual (sgrub chen) by heart and also performed a long retreat of Phur nag at Brag g.yung drung kha hermitage before it became a nunnery. From the time of G.yung drung bstan rgyal to today, the Rin spungs monastery has represented itself as a branch of Sman ri and G.yung-drung gling. It used to send its monks to Sman ri for study. The situation apparently still persists and some younger monks have made their way to the New Menri, rebuilt in the Dolanji area of Northern India.

101 This monastery is Rin spungs bkra shis smin gro ling, in the A mdo Shar Khog (Songpan) region where this manuscript comes from. The monastery was renamed this way after G.yung drung bstan rgyal (b.1768) became its head. Karmay et al., A Survey, 608.

102 On this hermitage and nunnery, see Karmay et al., A Survey, 626-628.
From this we can assert that the owner of the Phur nag sgrub skor (PhNGrThKh) above was a patron or a monk of the Rin spungs Monastery in A mdo Shar khog. It also points out how Sman ri and G.yung drung gling’s contributions to the Black Phur pa have been central to this particular system of practice, which thrived in regions as far away as A mdo Shar khog and A mdo Reb gong.

Conclusion

Comparative examination of the lineages of the Black Phur pa tradition confirms the importance of Sman ri as the source of this tradition in contemporary Bon. In this, we can understand the role of this institution not merely as a link in the chain of spiritual transmission but also as having a formative role in the creation of the Black Phur pa practices. As the manuscripts of Tshul khrims mchog rgyal from Nyag rong have shown, many of the ancillary texts and rituals of Phur nag originated in Sman ri. All the ritual source texts of Phur pa that are not gter ma, and those encountered in this article, stem from the tradition of Mnyam med Shes rab rgyal mtshan. Therefore, a preliminary conclusion would be to consider all non-gter ma Phur pa material (i.e. ritual manuals, praises, commentaries, etc…) as either products of or as having been either edited by or channelled through Sman ri. This helps us to establish a compelling argument in favour of ascribing the sole historical provenance of this tradition to Sman ri. Despite traditional claims and lineage accounts which regard Zhang zhung and Bhutan as the source of Phur nag, it is reasonable to consider Sman ri as the creator of the contemporary G.yung drung Bon practices of Phur nag. Other practices that were rediscovered later exhibit a substantially different pedigree, but the analysis of these would require another series of articles. This does not mean, however, that Sman ri was the sole creator of G.yung drung Bon: other important ritual practices and traditions, for example the Ma rgyud, come from other centers such that of the Gshen family in Dar Iding.

Contemporary lineages help us take the pulse of Bon and analyze its present situation. Among the institutions that are most closely aligned with Sman ri, such as Rin spungs and Snang shig, we find the Black Phur pa practiced, but not as the object of sacred dances and public display. Although A la bon brgya’s institution did receive the Sman ri tradition from Snang zhig, it is seldom practiced there today. Bon brgya rin po che heads a lay-based organisation, the Bon po sngags mang or the Congregation of Lay Tantric Practitioners. The main tutelary deity of this group, which is rather large and influential in this region, is Dbal gsas, the head of the gsas mkhar mchog lnga or the Five Supreme Ones of the Citadel. Phur pa is one of these. Dbal gsas is believed to be the commander of this group and lay tantric lama usually focus on him in order to practice their skills, which involve weather control by magic, exorcism, fertility and a host of other practices aimed at mundane results.104

Edition critique des instructions
de Bru rGyal ba g.yung drung sur la pratique de la Claire-Lumière (’od gsal) selon le cycle du Phyag khrid du Zhang zhung snyan rgyud

Jean-Luc Achard (CNRS, CRCAO)

1. Introduction

Depuis la publication de l’article “Mesmerizing with the Useless?” dans un précédent numéro de la RET, j’ai reçu un nombre assez inattendu de messages téléphoniques ou électroniques extrêmement favorables aux remarques énoncées dans cet article, de la part de chercheurs, de traducteurs et de personnes intéressées à titre individuel par ce type de littérature. Certaines questions soulevées dans ces messages portent avec raison sur les solutions que l’on peut trouver à cet état de fait littéraire qui s’impose comme le contre-exemple même de ce qu’un éditeur de textes tibétains devrait proposer à ses lecteurs potentiels. L’une des réponses qui me vient naturellement à l’esprit est celle de l’éducation professionnelle minimale que ces éditeurs devraient recevoir en terme d’édition, non seulement par respect pour les textes qu’ils édient ou ré-éditent, mais également par respect du public qui les achète. L’un des points soulevés dans ces courriers — basé sur le célèbre adage anglophone approve or improve — est d’une pertinence évidemment redoutable. Il ne me laisse d’autre choix que de confirmer ma désapprobation appuyée du travail éditorial effectué sur l’édition de Triten Norbutse du Phyag khrid de Bru rGyal ba g.yung drung (1242-1290) et de proposer un exemple de la tâche à accomplir sur ce type de textes, plusieurs fois réédités et avec de meilleurs résultats. Pour cela, il convient de produire une édition critique du texte, basée sur les versions les plus pertinentes déjà existantes. Le but d’une telle édition est évident pour tous ceux qui travaillent sur ce matériel.

L’absence du texte central de la pratique méditative sur la Claire-Lumière (’od gsal) dans l’édition de Triten Norbutse est apparue à certains possesseurs de ce volume comme le signe d’une rupture avec le respect de la tradition et comme l’expression d’une dynamique éditoriale essentiellement motivée par des questions financières. Il n’est pas nécessaire d’insister davantage sur ce point, mais il n’est pas non plus inutile de le rappeler. En particulier si l’on ne partage pas cette vision des choses et si l’on replace le problème dans la perspective des règles qui entourent les textes appartenant au corpus du Zhang zhung snyan rgyud.

1 Achard, “Mesmerizing with the Useless? A book-review inquiry into the ability to properly reprint older worthy material”, RET no. 19, p. 133-143.
2 Res ipsa loquitur.
En effet, si l’on s’en tient simplement aux règles qui régissent le cycle auquel les instructions de Bru rGyal ba sont rattachées, le problème prend une autre dimension et devient beaucoup plus délicat du point de vue de la tradition. Ces instructions représentent la codification des préceptes pratiques de la *Transmission Orale du Zhang zhung* (Zhang zhung snyan rgyud) et l’une de ces règles stipule clairement qu’il est interdit d’y ajouter ou d’en rentrer quoi que ce soit. Dans cette perspective, et ainsi que Yongdzin Rinpoch (Lopön Tenzin Namdak) l’a précisé dans nombre de ses enseignements récents, la transgression de cette règle est plus que problématique.

Le problème est que les règles dont il est question sont respectées avec une certaine tendance au laxisme. Il n’est que de consulter les diverses éditions des textes formant le corpus élargi du *Zhang zhung snyan rgyud* — avec les trois sortes Nyams rgyud et le Phyag khrid dont un texte est l’objet du présent article — en les comparant entre elles pour se rendre compte des différences qui les animent. Évidemment, les différences orthographiques ne sont pas toutes prégnantes de sens, loin s’en faut, mais elles montrent à elles seules que le respect des règles n’est finalement guère plus que formel. L’on sait grâce à Yongdzin Rinpoch que son maître, Yongdzin Sangye Tenzin (1912-1978), a préparé son édition xylographique du Phyag khrid et du *Zhang zhung snyan rgyud* avec autant de précision que possible\(^3\). Dans cette perspective, son édition du Phyag khrid est incomparable avec celle de Triten Norbutse que les lecteurs, traducteurs et chercheurs pourront oublier sans grande perte.

3 Ces règles sont énoncées inter alia dans le Nyams rgyud ’bring po sor bzhag, p. 23-25, 74, etc. (et en fait en plusieurs endroits des diverses versions de la *Transmission Orale*, exception faite de la version *Thor bu*). Elles portent sur quatre points : 1. ne pas altérer l’enseignement avec des références à des sources extérieures (*gzhung gzhan*) au cycle; 2. ne pas altérer les textes avec l’ajout de notes interlinéaires (*yig chung*); 3. ne pas altérer les préceptes avec les mots des hommes (*mi tshig*); et 4. s’appuyer sur des expériences d’accomplissements authentiques qui ne doivent pas être corrompues et qui doivent être conformes aux préceptes. Certains appliquent de nos jours ces règles à l’interdiction de compositions de commentaires, mais cela va à l’encontre à la fois de la tradition ancienne (théoriquement illustrée par sNang bzher lod po, puis bien plus tardivement par U rti bSod nams rgyal mishan et Bru rGyal ba lui-même qui, si cette supposée interdiction portait sur la composition de commentaires, l’auraient certainement suivie), mais surtout de la version actuelle du *Zhang zhung snyan rgyud* dont les quatre textes principaux sont accompagnés d’ouvrages supplémentaires ou de commentaires directs (et même d’un auto-commentaire pour l’un d’entre eux). Les différences de styles dans ces textes supplémentaires démontrent qu’il ne sont pas de la même main et donc qu’une tradition exégétique minimale a été à l’œuvre dans la compilation du cycle tel qu’on le connaît maintenant. Précisons qu’aucune des quatre règles énoncées ci-dessus ne figure dans le *sNyan rgyud* explique peut-être la présence de tous ces commentaires dans le cycle tel qu’on le connaît depuis au moins le 13\(^e\) siècle.

4 Elle n’est elle-même pas exempte de fautes. Il y a également des textes manquants dans son édition du *Zhang zhung snyan rgyud*, mais leur absence ne provient pas d’un manque de professionnalisme ou d’attention au travail xylographique effectué: il découle simplement du fait que ces textes n’étaient pas disponibles au moment de la gravure des planches. Les textes manquants sont : les divers *chad thabs* et autres *rnam thar* (telles que celles rédigées par Yang ston chen po), le *Rig pa’i rtsal dbang gi tantra*, le *Ye dbang chen mo*, ainsi que le *Thig le drug pa* et le texte contenant la pratique d’activités du Buddha Primordial (*Kun bzang don gyi phrin las*). Dans cette optique, l’édition préparée par Shardza Rinpoch est très certainement la plus complète parce qu’elle inclut la majorité de ces textes manquants, qu’elle rétablit la structure versifiée de certains passages, etc.
La pratique de la Claire-Lumière

La règle de restriction quant à l’ajout de textes, qu’il s’agisse de commentaires ou de compositions présentées comme des révélations, est somme toute beaucoup plus problématique qu’un oubli et soulève un grand nombre de questions relativement à l’originalité de certains traités considérés comme des ouvrages authentiques attribués à Tapihritsa (et “transcrits par sNang gzer lod po). Les différences de style dans les divers textes qui composent la collection actuelle montrent à n’en pas douter la présence de mains diverses dans les rédactions. Mais, plus problématique encore, cette interdiction d’ajout de matériel exégétique n’exclut en revanche pas les altérations orales qui affectent les enseignements de ces cycles. Celles-ci semblent tacitement tolérées ou plutôt tout simplement inconnues de la hiérarchie bon po. On sait que certains par exemple attribuent l’existence de représentations particulières dans le Zhang zhung snyan rgyud alors que celles-ci n’y figurent en aucune manière. L’on est ainsi en droit de se demander si l’adjonction éventuelle de commentaires contemporains ne doit pas répondre à une nécessité de conserver la canonicité de l’interprétation de ces textes à une période de l’histoire où ils sont le plus à même d’être mal interprétés, voire même totalement déformés dans leur sens. En effet, et répétons-le, si l’interdiction portant sur l’ajout de commentaires était certainement connue de maîtres tels que Bru rGyal ba (1242-1290) ou U ri bSod rgyal (13e siècle), l’on peut s’interroger sur la raison qui les a poussés à rédiger le matériel exégétique qu’ils ont laissé à la postérité, en transgression flagrante des règles établies par la tradition. Il se peut qu’à leur époque, certains déviaient déjà de l’interprétation correcte et qu’il était impératif d’en maintenir la canonicité pour les générations à venir. Dans cette perspective, les altérations orales contemporaines portant sur les enseignements de ce cycle complexe qu’est le Zhang zhung snyan rgyud (altérations mises par écrit dans des publications destinées au grand public) m’apparaissent comme autant de sonnettes d’alarme qui doivent pousser le chercheur à investiguer la canonicité de l’interprétation de ces textes auprès des patriarches actuels de la lignée, avant que l’authenticité de l’enseignement ne soit définitivement altérée par la nature de ces commentaires oraux et la disparition des maîtres de la génération la plus âgée.

2. Les thèmes du texte

Les enseignements décrits dans le texte édité ci-dessous appartiennent aux instructions sur la Claire-Lumière (’od gsal), à ne pas confronter avec la

---

5 Par hiérarchie, j’entends ici principalement l’autorité spirituelle de Yongdzin Rinpoche et de l’Abbé de Menri, Lungtok Tenpai Nyima. Je doute fort que l’un comme l’autre prennent le temps d’analyser ce qui est écrit en langues occidentales sur ce corpus de textes, à commencer par le second commentaire inclus dans le volume intitulé The Twenty One Nails (p. 123-246), ou bien dans le Wonders of the Natural Mind de Geshe Tenzin Wangyel.

6 Tenzin Wangyel, op. cit., p. 131. Les conceptions telles que celles des trois sortes de rig pa (ye rig, khyab rig, et bsam rig) n’existent pas dans le corpus du Zhang zhung snyan rgyud. Par ailleurs, la définition de khyab rig dans ce livre est erronée car elle laisse à penser que les objets matériels ont un rig pa, ce qui contredit non seulement la logique la plus basique, mais également le Zhang zhung snyan rgyud qui différencie clairement les objets (yul) comme étant inertes (bem po) et dénués de rig pa.
pratique de même nom dans le contexte des tantras (comme dans les six yogs de Nāropa par exemple). En effet, cette Claire-Lumière correspond à ce que l’on désigne dans le rDzogs chen comme la pratique du Franchissement du Pic (thod rgal). Exception faite d’un contexte très particulier, cette expression (i.e. thod rgal) n’est pas employée dans le corpus du Zhang zhung snyan rgyud, ni dans les textes anciens de rDzogs chen dans le Bon.7 Dans la littérature tibétaine plus générale, on la rencontre dans divers “environnements littéraires et sémantiques” largement différents, parmi lesquels on peut énumérer les cas suivants (non-exhaustifs) :

— le contexte des niveaux spirituels des pratiquants, répartis en adeptes à la compréhension instantanée (chig char ba), directe (thod rgal ba), et graduelle (rim skyes pa, rim gyis pa),
— le contexte des samapatti, tel que celui du vyutkṛṣṭaṃkāpanāt (thod rgal du snyoms par 'jug pa) dans le système de la Prajñāpāramitā8,
— le contexte de la cache de gter ma à distance (thod rgal du sba ba)9,
— le contexte de la pratique du Franchissement du Pic Spontané (lhun grub thod rgal) dans les enseignements rDzogs chen.10

Dans les textes rDzogs chen, l’idée qui sous-tend la pratique du Franchissement du Pic est celle d’un parcours rapide de la Voie, menant au Plein Eveil en l’espace d’une seule naissance, et plus précisément au cours de la vie elle-même, le parinirvāṇa à la fin de la vie n’étant que le témoignage de la vérité éternelle de l’impermanence11. L’ensemble de cette pratique consiste dans la familiarisation graduelle avec l’éclat du Discernement (rig pa’i mdangs), jusqu’à l’expression paroxystique de ce dynamisme culminant dans l’Eveil lui-même. La Voie parcourue par l’adepte dans ce contexte s’appuie sur la contemplation des visions (snang ba) de l’état naturel, spécificité particulière (litt. “richesse exclusive” [khyad nor]) du système rDzogs chen, que l’on ne recontre pas ailleurs dans le Bouddhisme Tibétain. Cette contemplation visionnaire est le cœur même du rDzogs chen et s’organise généralement en fonction de Quatre Visions (snang ba bzhi), à savoir :

— la Vision de la Réalité Manifeste (bon nying mgon sum gyi snang ba),
— la Vision de l’Accroissement des Expériences Lumineuses (nyams snang gong ’phel gyi snang ba),

9 Tulku Thondup, Hidden Teachings of Tibet, p. 258 n. 246. Selon les informations privées que j’ai pu obtenir en 1994 d’un gter ston contemporain qui souhaite rester anonyme, cette faculté ne relève pas du domaine d’activité des gter ston “ordinaires”. A ma connaissance, les références à ce type de “haut-faits” sont plutôt rares dans la littérature.
10 Voir également l’entrée thod rgal de Dan Martin dans le dictionnaire du THDL pour des références à l’occurrence du terme dans le contexte de l’Abhidharma.
11 Sauf pour ceux qui parviennent au Corps du Grand Transfert (’pho ba chen po’i sku) et qui ne manifestent pas de mort.
— la Vision du Paroxysme du Discernement (*rig pa tshad phebs kyi snang ba*), et
— la Vision de l’Epuisement de la Réalité (*bon nyid zad pa’i snang ba*).

En réalité, le *Zhang zhung snyan rgyud* n’utilise pas cette terminologie mais a recours à une classification en cinq visions (ainsi qu’on l’a vu dans “Mesmerizing with the Useless ?”), les visions 2 et 3 de la classification en cinq correspondent à la deuxième étape des Quatre Visions. Le système à cinq visions se décline de la sorte :

— l’Accroissement des visions (*snang ba ’phel ba*),
— le Déploiement des visions (*snang ba mched pa*),
— l’Augmentation des visions (*snang ba rgyas pa*),
— la Perfection des visions (*snang ba rdzogs pa*), et
— l’Aboutissement ultime des visions (*snang ba mthar thug pa*).

Le développement de ces visions s’appuie sur un ensemble de points-clefs (*gnad*), généralement au nombre de quatre ou six, qui permettent de maîtriser l’éclat du Discernement demeurant dans le corps. Cet éclat (*mdangs*) imprègne la totalité du corps, mais est plus particulièrement localisé dans le cœur ou Tente Brune des Cornalines (*mchong gur smug po*) qui est connectée aux yeux (techniquement désignés comme des Lampes d’Eau [*chu’i sgron*]) par un canal reliant ces derniers au cœur. Comme on l’a vu ailleurs14, l’ensemble des techniques yogiques permettant de se familiariser avec ces points-clefs est décrit dans la deuxième partie du texte central de sa compilation, *La Pratique Principale des Instructions sur les Profonds Points-Clefs* (*Zab mo gnad kyi gtags pa dngos gzhi*), qui fournit la description complète des préceptes à appliquer15.

3. La structure du texte

Afin de rendre un peu plus explicite la présentation du texte donnée

12 C’est-à-dire la pratique du Franchissement du Pic s’appuyant sur les supports diurnes tels que le soleil, le ciel, une lampe à beurre, etc.
13 Autrement dit à la pratique nocturne mais également aux retraites dans l’obscurité (*mun mtshams*).
14 Achard, passim.
ailleurs\textsuperscript{16}, voici en français le schéma de sa structure, tel que Bru rgyal ba l’a défini pour élaborer le corpus d’instructions sur la pratique de la Claire-Lumière :

1. La manière de méditer et de progresser sur le parcours de la Voie

2. La manière de chasser les souillures de l’intellect qui médite
   2-1. Les obstacles extérieurs liés aux personnes et à l’environnement
   2-2. Les obstacles intérieurs liés aux maladies
   2-3. Les obstacles secrets
      2-3-1. Les obstacles à la Vue
      2-3-2. Les obstacles à la Méditation
      2-3-3. Les obstacles à la Conduite

3. L’émergence des visions de la Claire-Lumière
   3-1. Le mode d’émergence des visions
      3-1-1. La contemplation des visions extérieures
      3-1-2. Le développement des expériences intérieures

3-2. L’intensification des Cinq Visions
   3-2-1. L’Accroissement des Visions
      a. Expériences visionnaires extérieures
      b. Expériences sapientiales intérieures
   3-2-2. Le Déploiement des Visions
      a. Expériences visionnaires extérieures
      b. Expériences sapientiales intérieures
   3-2-3. L’Augmentation des Visions
      a. Expériences visionnaires extérieures
      b. Expériences sapientiales intérieures
   3-2-4. La Perfection des Visions
      a. Expériences visionnaires extérieures
      b. Expériences sapientiales intérieures
   3-2-5. L’Aboutissement ultime des Visions
      a. Expériences visionnaires extérieures
      b. Expériences sapientiales intérieures

3-3. L’application à la gradation des Voies (\textit{lam})\textsuperscript{17}.

Les sources utilisées dans ce chapitre sur la Claire-Lumière sont en priorité

\textsuperscript{16} Achard, “Mesmerizing with the Useless?”, p. 141.
\textsuperscript{17} Je réalise en effectuant cette présentation en français que Per Kvaerne, le pionnier des études rDzogs chen dans le Bon, avait déjà présenté la structure de ce texte (et de tout le cycle du \textit{Phyag khrid}) dans son “Bon po Studies part II”, p. 329. Ce point aurait dû être mentionné in “Mesmerizing with the Useless ?”.
des textes-phares du Zhang zhung snyan rgyud, à commencer par Le Traité des Vingt-et-Un Sceaux (gZer bu njer geig gi gzung) qui est le texte-racine de la section secrétissime du cycle, et Les Instructions sur les Six Lampes (sGron ma drug gi gdam pa, texte-racine de la section intérieure du cycle), l’auteur alternant régulièrement les citations de ces deux textes. L’on y trouvera également des références à d’autres ouvrages canoniques (sans mention explicite autre que gsung rab) ou encore aux Six Avis (Lung drug), une source provenant d’un autre cycle rdzogs chen, à savoir le corpus de la Triple Proclamation de la Grande Perfection (bsGrags pa skor gsum)\(^1\).

4. Editions utilisées

Quatre éditions ont été utilisées pour comparaison lors de l’établissement de l’édition critique du texte. La version de base qui sert de référence est A. Les versions B et C sont extrêmement proches, B étant certainement une édition moderne (en dbu chen) de C (en dbu med). L’édition D, calquée sur A ne présente rien de particulièrement pertinent ou intéressant et n’a été en réalité consultée qu’en cas de doute effectif. Sa dépendance évidente sur A en fait une simple édition plus récente, introduisant des erreurs (certes mineures mais inutiles) intervenues lors de la saisie du texte.

C — Edition lythographique d’un manuscrit du Phyag khrid, éditée sous le titre de sNyan rgyud kyi sngon ’gro rim pa rnam, Dolanji, ca. 1965. Ce manuscrit a été reproduit dans le Bon gyi brten ’gyur chen mo, vol. 138, pp. 107-130.\(^2\)

D — Edition de Ratsa Geshe Tenzin Dargye, Triten Norbutse, 2002 (format livre A5).\(^3\)

L’édition de Triten Norbutse, qui pourrait porter le sigle E dans la liste des références, n’est ici d’aucune utilité parce qu’elle est incomplète. L’édition de

\(^1\) Dans la mesure où le Phyag khrid est un manuel du sNyan rgyud et non du Nyams rgyud, si la règle quadruple mentionnée au début de cet article devait s’appliquer au sNyan rgyud lui-même, Bru Gyal ba serait encore une fois ici en contradiction flagrante avec cette règle, dont il est permis de douter.

\(^2\) Blezer, “A Brief Bibliographical Key”, p. 136 = Sh2.

\(^3\) Blezer, op. cit., p. 151.
5. Edition critique

A titre de précision, j’ai noté toutes les omissions des shad (/) d’une version à l’autre dans la mesure où leur présence (ou absence) peut être également — certes pas dans tous les cas — un élément porteur de sens dans la traduction. L’on verra ainsi que la manière de lire certaines parties du texte diffère parfois grandement dans les versions A et B&C, en raison de la présence ou de l’omission d’un shad. Notons toutefois que cette présence ou cette absence n’est pas systématiquement le signe d’une différence de compréhension d’une version à l’autre.

Les variantes de lecture dans les diverses versions ne sont pas non plus toutes porteurs de sens, comme la récurrence de dang chas pa pour dang bcas pa, de l’archaïque las sogs pa (endémique dans les textes bon po) pour la sogs pa, etc., les lectures des ste en te (et vice versa), des ci en ji, des gcig en zhig ou cig, des pa en ba, etc.

Finalement, l’on ne manquera pas de remarquer, malgré l’abondance des notes indiquant des variations, que les versions du texte sont étonnamment proches les unes des autres et que l’on ne trouve pas de différences fondamentales ou radicales au point d’empêcher la collation systématique de toutes les lectures et d’aboutir à une édition de référence qui devrait servir de base à toutes les traductions du texte. Ce que l’on peut dire c’est que l’on est en présence de deux sources textuelles à la fois différentes et extrêmement proches. Elles sont proches parce que les variantes — bien que très nombreuses — sont souvent insignifiantes du point de vue du sens du texte, mais elles diffèrent dans la mesure où B & C contiennent (en de rares endroits) des micro-phrases que l’on ne retrouve pas dans la version de Yongdzin Sangye Tenzin.

Il est malheureusement impossible de retracer l’histoire des éditions du texte jusqu’à Brugyel ba lui-même (faute d’un manuscrit autographe ou remontant à ses disciples directs) et il semble que les versions les plus anciennes qui sont parvenues jusqu’à nous de ce ’Od gsal sgom pa’i khrid rim ne remontent guère au-delà du 18e siècle22.

---

22 Ce point reste toutefois sujet à discussion car nous ne sommes pas à l’abri de la découverte d’un manuscrit ancien de ce cycle, comme cela a été récemment le cas pour les Instructions sur le A Primordial (A khrid). L’on sait tous que les monastères Bon po (même ceux de l’exil) renferment plus de textes inédits (ou peut-être de versions inédites de textes déjà connus) que nous le soupçonnons généralement. Le Phyag khrid ne semble pas avoir été un cycle rare ou difficile à obtenir, si j’en crois les informations recueillies auprès de Yongdzin Rinpoche. L’on peut donc espérer que des recherches dans les bibliothèques autochtones nous apporterons quelques lumières sur ce sujet.

---

<sup>23</sup> Le sigle Ca indique qu’il s’agit de la cinquième section du cycle du *Phyag khrid*. Le présent texte est en effet précédé par les sections Ka (*rDzogs pa chen po zhang zhung snyan rgyud kyi lo rgyus rnam thar dang bcas pa*, p. 539-589), Kha (*rDzogs pa chen po zhang zhung snyan rgyud kyi ben spud dgu rim, p. 591-607), Ga (*Zhang zhung snyan rgyud kyi khrid rim lag len, p. 609-638), et Nga (*gZhi rang ngo spro dge mthong bla ba'i khrid rim, p. 639-655). Il est suivi par le reste du cycle (sections Cha-la) qui couvre les pages 675-713, les pages 715-726 étant consacrées aux Sept Cycles de la Claire-Lumière (*’Od gsal bdun skor, précédé par le Nag khrid ‘od gsal gyi mtshams bsad yig chung*) qui ne sont pas de la main de Bru rGyal ba (Karmay, *A Catalogue of Bon Po Publications*, p. 109) et qui ne portent pas de sigle. De toute évidence, devant cette absence de sigle, l’on peut penser que Yongdzin Sangye Tendzin considérait le Nag khrid et les Sept Cycles de la Claire-Lumière comme n’étant effectivement pas des compositions de Bru rGyal ba et, selon Yongdzin Rinpoché, il les a insérés dans son édition parce que ces deux textes complètent le cycle en termes de pratiques à accomplir. Par ailleurs, et contrairement à ce qui est présenté dans l’édition de Triten Norbutshé, l’on voit très clairement, d’après les titres listés ci-dessus, que le *Phyag khrid* est un manuel de pratique du sNygn rgyud, pas du *Nyams rgyud* (erreur fréquente et régulièrement répétée par les moines de la jeune génération éduqués en exil).

240 B&C: brtags.
241 C: phra.
242 Omis in B&C.
243 Omis in B&C.
244 Omis in B&C. Il est pratiquement certain que la lecture ’od dang zer soit la bonne (et non
pas ’od zer), dans la mesure où trois éléments sont à prendre en compte ici. En effet,
comme le montre rGy at rong Rig pa rang shar dans son Avènement de la Vue (Ita ba thog
visionnaire sont celles des lumières (’od), des rayons (zer) et des chaînes de Thiglis (thig le
nyag thag). Voir également Shardza Rinpoche, dByings rig mdzod, vol. II, p. 61, qui cite le
mème passage de l’Avènement de la Vue avec les trois éléments clairement distingués. Cette
manifestation triple forme ce que les textes désignent comme la Vision Supérieure des
Lumières propres à la Clarté visionnaire (snang gsal ’od kyi lhag mthong), l’une des trois
modalités de la Vision Supérieure exposées dans les textes Dzogchen, avec la Vision
Supérieure précéllente et immaculée (dri med mchog gi lhag mthong), et la Vision Supérieure
correspondant au Paroxysme de la réalisation de la Réalité (bon nyid rgyos tshad kyi lhag
mthong). Littérairement, l’exposé de ces diverses modalités est inconnu du corpus du
Zhang zhung snyan rgyud (qui, en matière de lhag mthong, est essentiellement focalisé sur le
Discernement de la Vision Supérieure [lhag mthong gi rgyud pa]), mais figure en bonne place
dans l’Avènement de la Vue.

\textsuperscript{475} B: pas, causatif qui est plein de sens ici parce qu'il indique la fin de la citation, alors que la version A laisse entendre que le reste de ce passage est une citation d'un autre extrait du \textit{gZer bu}. De fait, aucun passage de ce type ne figure dans le \textit{gZer bu} lui-même (sous cette forme ou sous des variantes proches) et il faut donc bien conclure que A est erroné sur ce point. En fait, à la fin de tout ce paragraphe se trouve une marque de fin de citation mais elle ne s'applique qu'au vers qui la précède immédiatement.

\textsuperscript{476} C: ba'i.

To Foreign Readers — Subscribing and contributing to the RET.

The subscription to the Revue d’Etudes Tibétaines (RET) is FREE. If you are not on our mailing list yet, please send an email to: jeanluc.achard@sfr.fr with the key-word “subscribe” in the subject heading of your email. You will be informed at least twice a year (usually October and April) of new issues appearing on the web.

If you wish to send an article to the RET, please feel free to do so in French, Tibetan, English, Chinese, German, Italian or Spanish. Articles are not limited in length but should be of standard academic levels. Articles should be sent preferably through email at the following e-address: jeanluc.achard@sfr.fr.
